CLOUD ENGINEER | DEVOPS ENGINEER

MICROSOFT AZURE | AMAZON WEB SERVICES | SOFTWARE DEVELOPMENT LIFECYCLE

Highly skilled Multi-Cloud DevOps Engineer with over 6 years of professional IT experience, including 5+ years of expertise in DevOps automation. Proficient in leveraging a wide range of DevOps tools and technologies such as Azure Devops, Git/GitHub, Maven, Jenkins, SonarQube, Nexus, Gitlab, Github Actions, Terraform, Powershell, Ansible, Docker, and Kubernetes to automate the configuration, development, testing, deployment, and monitoring of applications. In-depth knowledge of monitoring and alerting tools such as Prometheus, Grafana, NewRelic, and Elasticsearch. Demonstrated ability in building and maintaining CI/CD pipelines across various environments. Hands-on experience using Terraform and CloudFormation as IAC to provision cloud infrastructures on Amazon Web Services and Azure including IAM, Azure load balancer, Vms, Storage account, App service, Vnets, VPCs, EKS, ECR, EC2 instances, Lambda, CloudFront, API Gateway, ALB/NLB, Secret Manager, KMS, AKV, Certificate Manager, CloudTrail, Azure Monitor, S3 buckets, EFS, RDS, and Route53. Strong knowledge of writing Bash Shell, Groovy, YAML, Powershell, HCL. Good communication, analytical and interpersonal skills.

AREA OF EXPERTISE

SQL | Windows Servers | Storage | Microsoft Azure Services | AWS Services | Kubernetes | SAS Enterprise | Powershell Modules | Microsoft Entra ID | Networking | CI/CD | Python | Yml | Bash Shell | Azure AI Studio | Event Driven Solutions | Amazon Bedrock | RAG Pattern | Git/GitHub | Jenkins, Github Actions, Azure Devops CI, Circle CI | Groovy | JIRA | Snowflake | Protocols & Services: IPsec, SNMP, SSH, RDP, DNS, TLS, SSL, TCP/IP, FTPS, HTTPS, SCP, ICMP, IPv4, IPv6, FTP, SFTP, TFTP, Telnet, HTTP, & NetBIOS | Enterprise | Splunk | SCUBA Compliance | Risk Management Framework (RMF) Package Cloud Security | Prometheus.io | Grafana | Security Use Cases (Splunk) | Splunk Dashboards, Visualization, & Alerts | SPL Searches in Splunk | Ansible | Docker | New Relic | Helm, Argo CD, OpenSearch, Bitbucket

CORE COMPETENCIES

- **Good Communication:** Advanced level communication in English, I ensure the management team gets up to date well detailed feedback on every step of my project.
- **Situational Awareness:** Skilled in identifying and adapting to various team dynamics, ensuring the best approaches are employed for effective project delivery.
- **Continuous Improvement:** Dedicated to cultivating an environment that encourages ongoing learning and growth for all team members, fostering professional development.
- **Strong Problem Solver:** Adept at identifying issues and implementing effective solutions, ensuring smooth project execution and overcoming challenges efficiently.
- **Empowerment:** Committed to empowering and encouraging team members, creating an atmosphere where individual strengths are harnessed for collective success.
- **Transparency and Visibility:** Advocate for increased transparency within teams and across stakeholders, fostering clear communication and project visibility.
- **Team Player:** Open and Proficient in teamwork. I work well with people and my pushful, motivating nature helps me bring out the best in my team members.

PROFESSIONAL HISTORY

OWENS & MINOR

Cloud/DevOps Engineer, Dallas United States

September 2022 – Present

- Built and maintained complex **Jenkins** CI/CD pipelines to support Java-based projects. Integrated Jenkins using plugins with various tools such as Git/Github, Maven to build artifacts/packages, **SonarQube** for code quality analysis, Nexus to backup artifacts, **Docker** for containerization of microservices applications, **Kubernetes** for container orchestration, and **Ansible** for servers configuration and applications deployment.
- Developed powershell modules to set configurations in Azure environment in compliance with SCUBA
- Provisioned and managed AWS cloud infrastructure using **Terraform**, including IAM, VPC, EC2, EKS, S3, and CloudWatch. Also maintained **CloudFormation** stacks to automate cloud resource provisioning.
- Provisioned and managed Azure cloud infrastructure using Powershell and Terraform, including IAM, Vnets, Vms, AKS, Storage account.
- Managed **Git** branches, created organization, teams and project repositories in **Github**. Granted required access based on Least-Access Privileges, recommended, and implemented Git best practices, good commit messages and Git rebase over Git merge.
- Collaborated with Software developers in refactoring and decoupling of legacy application code into **microservices** applications. Built secured and scalable multi-tier architectures on the AWS platform.
- Deployed and configured cloud-based Kubernetes clusters using **Elastic Kubernetes Service (EKS)**, Kops, and self-managed clusters with **Kubeadm** to automate the deployment, **scaling**, **downscaling**, and managing of containerized microservices applications.
- Worked with Kubernetes Admins to write and maintain Manifest files for various microservices applications.
- Used **RBAC** to create and assign Roles, and Cluster Roles for authentication and authorization of required members based on Least-Access Privileges. I also configured ingress/egress rules for network policies in the Kubernetes clusters.
- Used **Helm** to install and configure logging, alerting, and monitoring tools like Prometheus/Grafana, for applications and server's disk usage and spikes, CPU utilization, request count, and latency. Also, installed Elasticsearch, filebeat, logstash, and Kibana for logs aggregation and data analytics of applications data. (ELK/EFK).

- Created **namespaces** and resourceQuotas to isolate different environments, maintained security, and manage resources in the Kubernetes clusters.
- Designed and implemented **automated backup and recovery solutions** using **AWS Backup**, **S3**, and **Glacier**, ensuring regular data snapshots, cross-region replication, and versioning for business continuity and disaster recovery.
- Used Helm to deploy **Nginx-ingress** controller in the cluster, and configured ingress routing rules for all backend microservices applications making use of service discovery.
- Wrote and maintained **Docker** files to build custom docker images for containerized applications following docker best practices.

RED ALPHA

Junior Cloud/Devops Engineer, Delaware, United States

August 2018– July 2022

- Built three tier architecture on the AWS cloud-environment consisting of the Web-tier, apps-tier, and database-tier. Configured internet facing Elastic Load Balancer to route traffic to applications in the private subnets. Set up an auto-scaling group for high availability of applications and to limit downtime.
- Used **Python**, Powershell and **Shell scripting** to automate repetitive tasks and build scripts for AWS and Azure resource management and monitoring.
- Setup disaster recovery architecture strategies such as backup and restore, pilot flight, warm standby and multi region using S3 IA, Glacier, Storage Gateway, and Snowball.
- Designed and implemented **disaster recovery solutions** using AWS services such as **S3**, **RDS**, **Route 53**, and **AWS Backup**, ensuring high availability and minimal downtime through automated **backup**, **restore**, and **failover** mechanisms across multiple regions.
- Used Web Application Firewall (WAF) to protect web applications from common web exploits at layer 7 HTTP/HTTPS including SQL injections, by defining rules in the Web Access Control List (Web ACL).
- Ensured networking security by configuring **WAF** and **AWS Shield** to protect applications from common exploits and DDoS attacks.
- Wrote **Ansible** playbooks to automate web server s configuration using YAML scripting, ran cron jobs, and upgrades.
- Used Key Management Service to encrypt data stored in secret managers, S3 buckets, EBS volumes, and Databases.
- Used HashiCorp vault, IAM, and AWS Secret Manager to create and store secrets of members and applications.
- Configured various performance metrics using AWS **Cloudwatch** and **CloudTrail**.
- Established high message durability across microservices using **AWS SNS** for serverless applications
- Collaborated with developers to troubleshoot specific issues, recreated tests, and validated configurations, enabling continuous deployment with minimal downtime.

EDUCATION

UNIVERSITY OF BAMENDA | BTech Information and communication technology

AWS Certified: AWS Solutions Architect Associate | 2023

AWS Certified: AWS DevOps Engineer

Microsoft Certified: Azure Administrator Associate – 2023

HashiCorp Certified: Terraform Associate (003)

Certified Kubernetes Administrator | In Progress

TECHNICAL SKILLS

Application tools: Git/Github, Gitlab, Maven, Jenkins, SonarQube, Nexus, Terraform, Ansible, Docker, Kubernetes, Helm Chart, Argo CD, Bitbucket, OpenSearch

Software Applications: Microsoft Word, Excel, PowerPoint, Publisher

Cloud Provider: Amazon Web Services, Microsoft Azure
