Full Stack .Net Developer

Professional Summary

- Over 7 years of experience in software development across the full Software Development Life Cycle (SDLC), with a strong focus on modern web, cloud, and enterprise applications.
- Expertise in .NET 6/7/8, ASP.NET Core MVC/Web API, C#, and Entity Framework Core for building scalable and secure backend services.
- Hands-on experience with Angular (12–17), TypeScript, RxJS, Bootstrap 5, JavaScript (ES6), HTML5, and CSS3 for building responsive and dynamic front-end applications.
- Proficient in developing and consuming RESTful APIs, integrating them with front-end apps, and securing APIs using OAuth2 and Azure Active Directory (Azure AD).
- Strong knowledge of SQL Server 2016/2019, writing optimized stored procedures, views, functions, and performance tuning.
- Experienced in cloud-native development using Microsoft Azure services like App Services, Blob Storage, Azure Functions, Key Vault, API Management, and Azure SQL Database.
- Familiar with Azure DevOps for CI/CD pipeline creation, automated builds, release management, and Git-based version control (GitFlow).
- Hands-on experience with Splunk for centralized application logging, custom dashboards, and real-time monitoring and alerts.
- Worked with containerized development using Docker for local environments and microservices deployment.
- Knowledgeable in N-Tier Architecture, OOP principles, and design patterns including Repository, Singleton and Factory.
- Adept at working in Agile/Scrum teams using tools like JIRA and involved in sprint planning, estimation, code reviews, and daily stand-ups.
- Familiar with testing frameworks such as xUnit, Postman, and Jasmine/Karma for unit and integration testing.
- Experience in building UI forms, dashboards, and reusable components with DevExtreme, Angular Material, and Reactive Forms.
- Integrated third-party APIs and services, implemented RBAC and front-end validation for robust and secure user experiences.
- Strong communication and cross-functional collaboration skills, with a proactive approach to production support and continuous improvement.

Professional Experience

Full Stack .Net Developer

Kroger | Cincinnati, Ohio, USA

May 2024 - Present

Responsibilities:

- Collaborated in Agile (Scrum) development cycles with daily stand-ups, sprint planning, and retrospectives to ensure rapid and iterative delivery.
- Migrated a legacy ASP.NET MVC application to ASP.NET Core 7 and Angular 15+ for improved performance and maintainability.
- Designed and built RESTful APIs using ASP.NET Core Web API; integrated them with Angular frontend using HttpClient and RxJS Observables.
- Created reusable Angular components with two-way data binding, routing, reactive forms, and custom directives to improve UI modularity.
- Leveraged Azure Blob Storage for file handling and implemented secure access using Shared Access Signatures (SAS).
- Used Azure API Management to publish, secure, and monitor internal APIs.
- Developed data access layers using Entity Framework Core with Code First and LINQ to query SQL Server 2019 databases.
- Built and optimized stored procedures, views, and functions for core modules such as permissions, workflows, and user notifications.
- Created automated Excel reports using C# and SQL Server jobs, integrated with background job schedulers.
- Developed dashboards using DevExtreme and Angular Material, incorporating dynamic tables, UI grids, and visual widgets.

- Integrated Splunk for centralized logging and application monitoring; created custom dashboards and alerts to track production incidents.
- Applied responsive design principles using Bootstrap 5 and CSS3 to ensure a consistent experience across devices.
- Worked with Dockerized containers for local API development and debugging environments.
- Coordinated with QA to support automation of SOA and API testing using Postman and Azure Pipelines.
- Implemented role-based access control (RBAC) on UI and API layers, integrating with Azure AD authentication.
- Supported IIS deployment pipelines using Azure DevOps release pipelines; managed Git source control via the GitFlow branching strategy.
- Participated in performance tuning and scalability planning during Azure App Services scaling.
- Conducted unit testing using xUnit and integrated code coverage reports into the CI pipeline.

Environment: .NET 7/8, C#, ASP.NET Core MVC & Web API, Angular 15+, Azure DevOps, Azure API Management, Azure Blob Storage, Azure Functions, SQL Server 2019, Entity Framework Core, LINQ, Splunk, Bootstrap 5, HTML5, CSS3, JavaScript (ES6), Git, JIRA, Postman, DevExtreme, Docker (intro-level)

Full Stack .NET Developer

Fiserv | Milwaukee, Wisconsin, USA

May 2023 - Apr 2024

Responsibilities:

- Actively involved in the software development life cycle (SDLC) including design, implementation, testing, deployment, and support of web-based applications.
- Followed Agile/Scrum methodology, participated in sprint planning, daily stand-ups, retrospectives, and continuous delivery to meet customer requirements.
- Developed web applications using C#, ASP.NET MVC 5, HTML5, CSS3, JavaScript, XML, and consumed both SOAP and RESTful Web Services.
- Applied the Model-View-Controller (MVC) design pattern to structure application logic and promote separation of concerns.
- Utilized Data Annotations and ASP.NET validation controls to implement client-side and server-side form validation.
- Designed and implemented dynamic user interfaces using JavaScript, Bootstrap 4, Material UI, and CSS.
- Leveraged Angular 12 to build Single Page Applications (SPAs), using components, services, observables, and routing modules.
- Consumed REST APIs via HttpClientModule in Angular and implemented UI features using UI-Grid, Angular Material, and custom directives.
- Developed ASP.NET Web APIs for backend services and integrated them with the Angular front-end.
- Created and consumed Web Services that allowed multiple client systems to interact with enterprise data in a scalable manner.
- Built and maintained data access layers using ADO.NET and LINQ to SQL, enhancing data retrieval performance and code readability.
- Wrote complex SQL Server 2012 queries, stored procedures, functions, views, and triggers for data processing, reporting, and workflow logic.
- Designed and executed data migration strategies between legacy systems and SQL Server databases.
- Used Splunk for querying application logs, troubleshooting issues, and generating alerts based on data pattern recognition.
- Integrated Splunk dashboards into CI/CD pipelines with Azure DevOps for real-time deployment and environment monitoring.
- Published secure APIs via Azure API Management and used Azure Functions (HTTP Trigger) to handle background processes such as sending automated emails.
- Used Azure App Configuration and Azure Key Vault to securely manage application secrets and configurations settings.
- Deployed applications to IIS 7 on both test and production servers, using Team Foundation Server (TFS) for version control and release management.
- Ensured quality through manual and unit testing using MSTest and verified service interactions using Postman.
- Provided production support, issue triaging, and maintenance for existing application components.

Environment: C#, ASP.NET MVC 5, Web API, Angular 12, HTML5, CSS3, JavaScript(ES6), Bootstrap 4, Material UI, ADO.NET, LINQ to SQL, SQL Server 2012, Splunk, Azure API Management, Azure Functions, Azure App Configuration, Azure Key Vault, Visual Studio 2017, TFS, IIS 7, Windows Server

Full Stack .NET Developer

Cybage Software Private Limited | Hyderabad, India

Jan 2020 - Dec 2022

Responsibilities:

- Involved in development life cycle, from the design phase to implementation, testing and deployment.
- Followed Agile methodology to deliver high-quality software and meet customer expectations.
- Worked with technologies such as C#, .NET, ASP.NET MVC, Razor, XML, HTML5, CSS3, JavaScript, and both SOAP and RESTful APIs.
- Applied the Model-View-Controller (MVC) architectural design pattern for structured application development.
- Implemented Client-side validations using Data Annotations.
- Designed and developed user interfaces for various tools and implemented validations using ASP.NET validation controls, JavaScript, and CSS.
- Leveraged object-oriented features of .NET (C#), including event handling, error handling, caching, and security mechanisms.
- Automated log ingestion pipelines using Splunk universal forwarder and optimized log management for large-scale applications.
- Created and managed policies for rate limiting, caching, authentication and authorization.
- Developed Web APIs to handle HTTP requests and provide backend services.
- Proficient in front-end design tools like Angular, Angular Material, UI-Grid, Bootstrap, and CSS.
- Worked with IIS 6/7 and .NET assemblies for application deployment.
- Developed SQL stored procedures, views, and functions to support dashboards, rule engines, permissions, notifications, and workflow operations.
- Built web services to enable multiple clients to access useful enterprise data.
- Designed, coded, and modified applications using ASP.NET.
- Used ADO.NET for building the data access layer and database interactions.
- Performed data migration using tools like MS SQL Server for transferring data between databases.
- Created database objects such as tables, stored procedures, and triggers in MS SQL Server.
- Utilized ADO.NET objects like DataReader, DataAdapter, and DataSet to fetch and handle user data.
- Wrote unit test cases to ensure application functionality and reliability.
- Deployed applications to test and production servers.
- Responsible for maintaining versions of source code using Team Foundation Server.

Environment: ASP.NET, ADO.NET, C#, HTML5, CSS3, JavaScript, SQL Server, Visual Studio 2010/2017, Azure API Management, Splunk, Team Foundation Server (TFS) / Visual SourceSafe (VSS), IIS 6/7

.NET Developer

Colruyt Group India | Hyderabad, India

Aug 2017 - Dec 2019

Responsibilities:

- Involved in gathering and analyzing requirements from the client and actively participated in the full software development life cycle (SDLC).
- Developed the application using N-Tier architecture and followed Agile methodology for iterative development.
- Designed and developed the application using 3-Tier architecture to promote separation of concerns.
- Created web pages using HTML5 and CSS3 for a responsive and modern UI.
- Implemented the business logic layer using Object-Oriented Programming (OOP) concepts such as abstraction, encapsulation, inheritance, and polymorphism in C#.
- Maintained API versions and revisions to ensure backward compatibility.
- Designed and developed web forms using ASP.NET, ADO.NET, C#, JavaScript, and HTML.
- Implemented .NET security features such as authentication, authorization, form-based authentication, role-based access control, and user account impersonation.
- Utilized ADO.NET Entity Framework to connect to the database and perform all CRUD operations.
- Developed stored procedures, triggers, and functions to handle data transactions in SQL Server 2008.
- Performed unit testing on application modules using Visual Studio .NET's debugging and tracing tools.

Environment: Visual Studio, .NET Framework, C#, ASP.NET, ADO.NET, Azure API Management, SQL Server 2008, HTML5, CSS3, JavaScript, XML
