Career Experience

VTech Dealer IT – Miami, FL

VTech Dealer IT is a managed services provider (MSP) specializing in the automotive vertical; we exclusively service car dealerships in the United States. We are headquartered in Miami, Florida, and employ a mix of remote staff from Philippines and Colombia as well as field technicians based in California and Florida. We support approximately 2,300 individual users and their workstations, 170 virtual and physical servers, 1 GSuite tenant and 16 Office 365 tenants.

Manager, System Operations (2023 to Present)

As manager of the System Operations team, I am responsible for leading, mentoring and managing a team of 3 direct reports and one consultant, consisting of system administrators and network engineers.

We oversee, develop, deploy, maintain and administer computer networks and related computing environments, including system software, hardware, automation and configurations. I am ultimately responsible for ensuring the performance and reliability of all IT systems, including servers, networks and applications.

I lead and manage IT projects, such as server installations, Office 365 and GSuite tenant migrations, the deployment of Windows 11 and implementation of ManageEngine's ADManager Plus IAM tool.

I implement and manage security measures to protect data, software and hardware, recommending measures to ensure compliance with industry standards, regulations and organizational policies.

I am responsible for managing our Datto Remote Monitoring and Management (RMM) platform and Autotask Professional Services Automation (PSA) and ticketing platform.

VTech Dealer IT – Miami, FL**Tier 3 Engineer, System Operations (2023 to 2024)**

My role on the System Operations team is to support the deployment, operation and improvement of infrastructure services, such as Office 365, Microsoft Exchange, Active Directory, LAN & WAN switching & routing, Microsoft Purview, Entra ID, Microsoft Teams, Microsoft SharePoint, EDR & XDR, etc. I help to maintain & troubleshoot the current environment and work with my team to plan for & implement improvements to provide the best experience possible for our users while ensuring cybersecurity and general IT best practices are adhered to.

Additionally, I am responsible for assisting Tier 1 and Tier 2 Help Desk team members with the resolution of their escalated tickets, conducting root cause analysis, creating documentation for the Help Desk and end users, and training other team members.

Premise Health – Brentwood, TN**Senior Systems Engineer, Solutions Engineering (2022 to 2023)**

The Sr. Systems Engineer takes a holistic approach to the onboarding and support of technology solutions at Premise Health to meet business requirements.

Responsibilities include participation in the evaluation of new technologies, IT architectural design, as well as heavy IT project management of the implementation and ongoing maintenance of various technology platforms. Responsible for performing the installation, configuration, administration, monitoring, patching, upgrading, tuning of the web / server platforms, and engineering support \ issue remediation of those technologies. These platforms are primarily hosted on and leverage: Windows Server 2012, 2016, 2019, IIS, Apache, Application Delivery Controller (ADC) load balancing, Terminal Services, VDI, and Citrix. Additional support functions include IT & Security platform administration as well as Epic Data Courier Administration duties.

- Evaluation of new technologies. Research, analyze, and formulate recommendations regarding technologies, products, and solutions to fulfill requirements within the enterprise.
- Communicate with vendors and service providers to gain a clear understanding of product or service capabilities and costs.
- Perform IT architectural design of new technologies to meet business requirements. Analyze and estimate feasibility, costs, time, and work effort needed to design and implement moderately complex technical solutions.
- Lead / manage medium to large scope projects involving multiple teams.
- Responsible for the installation, configuration, administration, monitoring, patching, upgrading, tuning of the web / server platforms. engineering support / issue remediation of various technology platforms.
- Establish and implement policies and procedures pertaining to deployment, security, maintenance, and disaster recovery within the supported environments.
- Establish system performance standards and provides guidance on best practices.

Premise Health – Brentwood, TN

Senior Systems Engineer, Integrated Device Solutions (2019 to 2022)

As the senior engineer on the Integrated Device Solutions team, I work with our junior engineer, and Business Analysts, to develop solutions for the integration of clinically oriented devices into the Premise Health IT environment. We are a highly cross-functional team, working with various security, clinical, operations, legal and other IT teams to ensure devices meet Premise Health standards and are implemented in a secure & reliable manner.

- Leverage my technical expertise to fully understand devices we vet, how they will integrate into our environment, and the implications of design choices.
- Develop installation packages for software required by devices we vet (primarily PowerShell scripting).
- Provide Tier 3 support for devices and services that fall within the purview of our team.
- Provide as-needed help to other IT teams where I have expertise and can be of assistance.
- Author policy documents concerning devices we vet.
- Author Knowledgebase Articles for use by internal IT teams and end users.
- Provide guidance to junior engineers and business analysts on our team.
- Author System Design Documents for device & related systems' implementation.
- Assist Enterprise Architecture with review of System Design Documents submitted by other IT teams.
- Organize and run small projects to completion.
- Work with Business Analysts and Project Managers on large projects to provide technical expertise and assist with project organization.

Signature Family Wealth Advisors – Norfolk, VA

Subject Matter Expert (SME) in server and systems administration, IT strategic planning, systems migration, IT project management, and troubleshooting. Provided advisement and consultation to clients to effectively meet client needs.

IT CONSULTANT (2015 to 2019)

Provide oversight and management of multiple servers, storage, and access points. Integrate key configurations and components monitored their effectiveness and adjusted accordingly. Assessed existing programs and processes. Identified areas of improvement and implemented upgrades, updates, and new tools as needed.

- Migrated on-premises Microsoft Dynamics CRM 4.0 to Microsoft Dynamics CRM 2016; on-going management, maintenance & support of CRM components, to include Windows Servers, Internet Information Services, SQL Servers & databases, Active Directory Federated Services and Outlook add-in client-side components.
- Ported third-party developer's custom code to support migration of CRM application & database servers to a new environment.
- Extended functionality of the CRM application by creating an ASP.Net web app, written in C#, which filled custom PDF forms based on data returned from a FetchXML query supplied by local CRM administrators.
- Supported FreeBSD-based RADIUS server and Certificate Authority; developed Bash script automating generation, and distribution, of PKI certificates required for the end-user's VPNs.
- Managed Microsoft Active Directory, including supporting services such as Group Policy, DNS and DHCP.
- Deployed Microsoft Windows Server physical Hyper-V hosts and virtual machines, including Domain Controllers, SQL Server and Microsoft Dynamics CRM Server.
- Created PowerShell scripts in support of data synchronization with ShareFile cloud-based file sharing service, Microsoft Exchange mailbox management, routine Active Directory user management.
- Migrated on-premises Microsoft Exchange Server 2010 to Microsoft Exchange Server 2013; on-going management & support of the Exchange server and related client-side applications.
- Utilized MS Deployment Workbench to successfully migrate 50 workstations from Windows 7 to 10.

Advanced Network Products, Inc. – Glenside, PA

Delivered superior support to end-users and IT staff on a collaborative 6-member cross-functional team.

MANAGED SERVICES ENGINEER II (2013 to 2014)

Helmed issue resolution and troubleshooting through telephone inquiries, site visits, and monitoring by an external company for desktop operating systems, server operating systems and platforms, and server hardware. De-escalated and corrected issues. Generated cost savings through preventative systems maintenance, health monitoring, effective systems management, and offering strategic recommendations of additional solutions.

- Spearheaded exceptional technical support for up to 15 tickets/inquiries per day.
- Partnered with internal Account Managers and CIOs to brainstorm action plans and determine project scopes for clients. Contributed to project updates with the Project Manager in client meetings.
- Essential player in the collaborative design, development, and deployment of the in-house services Infrastructure, Remote Backup Services, and a full range of applications and tools company wide.
- Enhanced client relations management through exemplary service, updates, and progress reports. Aligned and advanced ticket data according to SLAs through ConnectWise.

Technical Contractor, Self-Employed – Abington, PA

Developed and fostered client relationships, providing diverse technical services to high-growth organizations.

FREELANCE CONTRACTOR (2012 to 2013)

Delivered technical services to key clients including, but not limited to network and systems administration, MS Access/VBA, and MS C# and C/C++ programming.

Sussman Automotive – Jenkintown, PA

Primary operational manager of IT services, including oversight of more than 200 end user workstations across 7 regional locations in Pennsylvania and New Jersey.

IT Manager (2004 to 2012)

Advised technical operations and troubleshooting as the company resource and Help Desk. Managed the LAN and WAN infrastructure, server and client operating systems, patches/issue resolution, upgrades, and process improvements. Collaborated with C-level executives and senior leadership to establish policies and procedures in accordance with regulatory compliance statutes (i.e., Graham-Leach-Bliley, SOX, HIPPA).

- Developed Windows Service emulating an HP PCL network printer, which received invoice print jobs, extracted line-item detail from the print job, used Crystal Reports automation to create a pick list sent to the warehouse printer, and passed the original invoice print job unaltered to the business office.
- Created custom Windows application to extract service department work order data from database and print customer satisfaction survey postcards.
- Created custom Windows application for the Internet sales department automatically locating alternative in-stock vehicles similar to customers' requests.
- Developed ASP.Net based web app and database to generate and track internal vehicle stock numbers and their associated VINs.
- Project-managed a systems migration to a new dial-tone and internet provider, on time and within budget.
- Cut telecommunication expenses by 30% by updating the internet connectivity company wide.
- Automated and streamlined user management and workstation operations through the design and integration of internal management tools utilizing VBScript, Jscript, Visual Basic, C#, C, and C++.
- Led upgrades and configurations on multiple components, servers, circuits, and access points per extensive proficiency in MS Exchange Server, Cisco applications, and Windows servers.
