

Godswill Onwuchekwa

Full Stack Java Developer

godswill.onwuchekwa1@gmail.com | (430) 558-5803 | Arlington, TX 76010

Summary

Full-stack Java Developer with 7+ years of experience in Spring Boot, Microservices, and Angular/React UI development. Skilled in building scalable RESTful APIs, integrating cloud solutions on AWS/Azure, and implementing CI/CD pipelines for automated deployments. Strong expertise in SQL/NoSQL databases, Kafka, Docker, Kubernetes, and Agile methodologies.

Technical Skills

Programming & Frameworks: Java (Java 8/11+), J2EE, Spring Boot, Hibernate JPA, Microservices,

TypeScript, JavaScript, Angular, RxJS, React, Node.js, Python (for automation and scripting)

API Development & Integration: RESTful Web Services, SOAP APIs, GraphQL, OAuth2, JWT, Role-Based Access Control (RBAC), Event-Driven Architecture (Kafka, RabbitMQ)

Cloud & DevOps: AWS (Lambda, S3, API Gateway, EC2, RDS, DynamoDB, SNS, SQS), Azure (Functions, AKS, EventHub, Data Lake Storage), Docker, Kubernetes, Terraform, Ansible, CI/CD (Jenkins, GitHub Actions, GitLab CI, Azure DevOps)

Databases & Storage: PostgreSQL, MySQL, Oracle, SQL Server, MongoDB, DynamoDB, Query Performance Optimization, Data Modeling

Testing & Automation: JUnit, Mockito, TestNG, Selenium, Cypress, JMeter, Gatling

Infrastructure & Networking: Linux Administration, Shell Scripting, Cloud Networking, API Gateways, OSI Model, Encryption Standards

Version Control & Collaboration: Git, GitHub, GitLab, Bitbucket, Agile (Scrum, Kanban), Jira

Work Experience

Client: Samsung Electronics America (*Jan 2024 – Jan 2025*)

Role: Full-Stack Java Developer

- Developed and maintained high-performance microservices for Samsung's connected device ecosystem, optimizing smart home automation, device diagnostics, and real-time analytics.
- Designed and implemented Spring Boot-based microservices to process real-time telemetry data from IoT-enabled Samsung devices, integrating with SmartThings APIs for performance monitoring and predictive maintenance.
- Optimized Hibernate ORM mapping and PostgreSQL indexing, reducing query execution time by 45%, enhancing data retrieval speeds for internal monitoring and analytics tools used in device lifecycle management.
- Implemented distributed caching with Redis, reducing redundant API calls and improving response times for device tracking, order management, and customer support applications.
- Designed event-driven workflows using Kafka and RabbitMQ, enabling efficient asynchronous processing for firmware updates, system alerts, and automated inventory management.
- Developed secure RESTful APIs for Samsung's supply chain and retail integration platform, facilitating seamless data exchange between manufacturers, distributors, and service providers.
- Built and maintained responsive front-end applications with React and Angular, enhancing the UX for customer service dashboards, device provisioning tools, and logistics tracking systems.
- Implemented state management with Redux and NgRx, optimizing real-time data handling and reducing UI latency for device analytics dashboards and order processing systems.
- Developed and maintained comprehensive test suites using JUnit, Mockito, Cypress, and Jest, achieving 95%+ test coverage to ensure system stability and reliability.

- Led the migration of legacy monolithic services to containerized microservices, leveraging Docker and Kubernetes to improve scalability, deployment efficiency, and fault tolerance.
- Automated CI/CD pipelines with GitHub Actions, Jenkins, and Terraform, enabling continuous integration and zero-downtime deployments for mission-critical Samsung cloud services and connected device platforms.

Client: TeleWorld Solutions (*Jun 2020 – Dec 2023*)

Role: Full-Stack Java Developer

- Developed scalable microservices for a Network Performance Monitoring System, enabling telecom providers to analyze and optimize network performance in real time.
- Implemented Spring Boot microservices to process large-scale network telemetry data, integrating with Ericsson and Nokia APIs for real-time monitoring of signal strength and bandwidth.
- Optimized PostgreSQL queries and Hibernate ORM mappings, reducing execution time by 40% and improving response rates for telecom engineers.
- Designed Redis caching strategies, minimizing redundant API calls and improving data retrieval speed for customer service applications.
- Built asynchronous workflows with Kafka, enabling proactive network performance analysis and issue detection.
- Developed RESTful APIs for automated site provisioning, integrating with Twilio for alerts and Stripe for billing, streamlining customer onboarding.
- Created responsive Angular UI components, improving the telecom engineers' monitoring experience with RxJS and NgRx state management.
- Led the migration from monolithic architecture to containerized microservices, leveraging Docker and Kubernetes for better scalability.
- Automated CI/CD pipelines with GitHub Actions and Jenkins, ensuring efficient and reliable software deployment.

Client: Citi (*May 2018 – May 2020*)

Role: Full Stack Engineer

- Developed high-performance trading and risk management applications using Java (Spring Boot), Node.js, and React.js, ensuring real-time data updates.
- Designed and integrated RESTful and GraphQL APIs, improving system performance and data exchange with financial services platforms.
- Built and optimized frontend components using Angular and React, enhancing user experience with responsive UI/UX design.
- Implemented real-time messaging and event-driven systems using Kafka and WebSockets, enabling instant trade execution updates.
- Worked with SQL (Oracle, PostgreSQL) and NoSQL (MongoDB) databases, optimizing queries for large-scale financial transactions.
- Ensured secure API communication with OAuth2, JWT, and encryption standards, aligning with banking security compliance.
- Automated CI/CD pipelines with Jenkins, Docker, Kubernetes, improving deployment efficiency and system scalability.
- Developed automated unit and integration tests using JUnit, Mockito, Selenium, and Cypress, ensuring software reliability in a high-frequency trading environment.

Education

School: The University of Texas at Arlington

Degree: Bachelor's Degree, Information Technology
