PROFILE

Integration Developer/Lead with over 13 years of expertise in enterprise-level solution design and implementation, specializing in SOA Suite, Oracle Service Bus, MuleSoft Anypoint Platform, and Workato. Skilled in developing scalable APIs, orchestrating workflows, and system integration across various environments. Proficient in RESTful/SOAP web services, Enterprise Integration Patterns, and DataWeave transformations. Committed to delivering secure, maintainable, and high-performance solutions by collaborating effectively with stakeholders.

PROFESSIONAL EXPERIENCE

MuleSoft Integration Architect

02/2022 – 01/2025

Logitech

- Developing APIs using MuleSoft platform components including API Manager, Cloud Hub, AnyPoint Studio, Dataweave and Any Point Messaging Queue (MQ) and tested Web services and Rest API's using testing tools such as Postman, SOAP UI, Advanced Rest Client.
- Designed RAMLS using Fragments and Libraries. Published API Documents to Exchange and shared the same via API Portals.
- Involved in Migrating the projects from Oracle OSB to Mule4.
- Experience on creating flows, sub flows and used Mule connectors like Http/s, DB, Any point MQ, SFTP, AWS SQS, SNS and S3 etc.,
- Used For Each Parallel, Batch Jobs and Scatter Gather for parallel processing while dealing with batch processing.
- Dealt with communication protocols like Http, SFTP, JMS, JDBC etc.,
- Had knowledge on SAP Integrations like IDOC and BAPI operations.
- Experience in Integrating Salesforce using Mule4 Connector operations like create, update, upsert, on modified object, query, publish and subscribe to platform events.
- Designed RAMLS for the API Specifications provided using Any point Design Center.
- Implemented MuleSoft provided OAuth for securing the API's and delivered poc on JWT authentication using OAuth.
- Automated Mule deployments by creating GitHub pipelines via Maven.
- Having idea on VPC and VPN and worked on Dedicated Load balancer in Cloudhub.
- Created MUnits using Test Recorder. Used Spy processor to spy on event processors.
- Writing Data weave expressions to transform data, Control message content, flow, and processing by selecting and implementing appropriate connectors, routers, scopes, and filters.
- Designing and implement comprehensive error handling strategies for applications.
- Converting partner related EDI to API implementations using MuleSoft, for Ingram Micro Partner related transactions like 850, 855, 810 and 870.
- Worked on MuleSoft Any point Partner Manager, to create message flows, message types and identifiers.
- Used X12 and AS2 Connectors while dealing with EDI transactions.
- Dealt with complex transformations using Data weave to convert EDI related logics to API related specs.
- Using ECS, Configurations are done to transfer the files to various SFTP Servers.
- File transfer to push to AWS S3 after polling from JMS source using OSB 12c.
- Developed Java Utility to generate Signature for AWS S3 Rest API Calls.
- Handled SFDC to OCRM interface using OSB12c.
- Delivered integration solutions for OKTA interfaces using OSB12c includes operations like create user, Sync password, Terminate User and Get User.

- Developed Workato Message Templates for the custom templates used in Expensify API calls.
- Used Transform XSLT activity in Workato to deal with complex mappings.
- Created sub recipe functions for db interactions to rollback transactions in case of failures
- Used few other activities like Handle Errors, For-Each, look-up functions, Conditional checks.
- Used workato environment properties in the interfaces to promote to higher environments.
- Developed Workato Message Templates for the custom templates used in Expensify API calls.
- Used Transform XSLT activity in Workato to deal with complex mappings.
- Created sub recipe functions for db interactions to rollback transactions in case of failures
- Used few other activities like Handle Errors, For-Each, look-up functions, Conditional checks.

Technical Lead

12/2019 – 02/2022

GlobeLife

- Designing REST API's with Mule 4.0, developed MuleSoft applications based on the RAML's designed
- Explored API manager to create API policies like basic authentication, Rate Limiting, Ip allow list and the auto discovery id's.
- Used map, mapobject, pluck, reduce, split by, join by etc., in data weave
- Designed custom look up functions and referring methods from custom java class in dataweave.
- Delivered dynamic data weaves using dynamic evaluate component
- Implemented API LED connectivity architecture for the delivered projects
- Created Custom functions in Data weave.
- Used Any point MQ's for custom logging mechanism.
- Used Auto Discovery to link the mule application to the api created in API Manager.
- Handled Enhancements in Insurance domain for various interfaces like OFAC Search, Correspondence etc., to accommodate new fields in the existed policies.
- Using WLDF, sent email alerts when messages are left in queues.
- As there is no adapter to interact with AWS in OSB 12c, developed custom java utility to achieve the same.
- Major contributor in SOA 12c to mule migration and Mule development, integrations with SQL database, Oracle database, AWS SQS, and SNS, salesforce etc.,

Integration Developer

07/2017 – 11/2019

Logitech

- Used NeoLoad tool to do performance testing for the applications built using Oracle SOA.
- Experienced with functional web services testing using soap ui.
- AddingComposite sensors and done enhancements to the existingBPEL Process includes MDM related Interfaces to poll the records from topic instead of queues.
- Delivered ADF UI to users to display invoices made an entry to SOA and to know the failures while processing invoices and to display serialization number based on the invoice number.
- Added Views in Oracle imaging console for Image Processing APAC Region rollout.
- Using OSB made calls to third party systems, which has been exposed as rest-based service.
- Converted xml to JSON as per the expensify project requirement and sent to third party system as rest service.
- Interfaces with well-developed error handling and custom email alerts on successful or failure case.
- Developed custom java class to call expensify api's with content type as application/www-xfrom-URL encoded as the mentioned content type was not supported in OSB 11g.

DevOps Engineer

04/2016 – 07/2017

Asciano, GMW, Saapol

- End-to-End testing done by including all the end system stakeholders for the mule applications built by creating a postman collection for all the scenarios.
- Converting Invoices to PDF's and then sending the PDF as an attachment in email to stake holders using OSB.
- Getting the GPS data from external systems and then updating the same data to vendor Systems using OSB.
- Designed Email notification service using osb 11g and used across multiple interfaces.
- Delivered ADF Dashboards to display the soa infra database space usage details.
- Created project, pipeline and custom activity templates for re-use in OSB 12c.
- As OSB is stateless engine, implemented logging utility which can be used across multiple applications to track the status of execution.
- Done Enhancements for existing applications in GMW. Template changes using BPM and some XSD changes.

Programmer Analyst

12/2014 – 04/2016

Astrazeneca

- Implemented Fault Handling Mechanism for AstraZeneca Activity Central Applications.
- Taking care of batch processing in production environment.
- Implemented distributed topic in applications for faster message processing.
- Debugging the application issues.
- Handling all Enhancements for various modules in both BPEL and OSB.
- Without using DB adapter fetching the results from view using predefined function in BPEL.
- Processing XSLT files using predefined function in BPEL.
- Writing files to FTP location, even if new requirement comes in xml files need to do changes only in transformation files and no re-deployment of code is required.
- Inserted artifacts to DB based MDS.
- Converted XML to Binary64 format to write the data to FTP Location in csv format.
- Provided Dashboard UI for monitoring BPEL Status check using ADF which will display BPEL Status in EM Console
-

Senior Systems Engineer

02/2012 – 11/2014

Lexis Nexis

- Design, develop and deploy Business Processes Orchestrated in BPEL and OSB using Oracle JDeveloper and SOA Suite 11g.
- BPEL Process developed with process activities and functionalities like data conversion, Fault and Error handling capabilities (Catch and Catch All), Synchronous and Asynchronous processes, Transformations, XSD and XSLT.
- WSDL's are created with the following customer operations GET, SEARCH, SYNC.
- Created Schemas as per the requirements captured.
- OSB Process delivered with Message Flow Components such as Routing, Route Node, Service Call out, Replace, Assign, publish, Transformations and XQuery etc.,
- Preparation of unit test cases and Unit Testing.
- Analyzing and Fixing Issues.
- Published Knowledge documents at Infosys Portal in K-Shop are Changing JMS Transport Message headers and Properties at Runtime, Basic Function of XPATH.

SKILLS

Mulesoft

Anypoint Design Center, Anypoint Exchange, Anypoint API Manager, Runtime Manager

Workato

WSDL

Oracle SOA

Oracle Service Bus, BPEL, ADF

Xml/Xsd

RAML

EDUCATION

BTech, ECE

Jawaharlal Nehru Technological University, Kakinada

07/2007 – 05/2011

CERTIFICATES

Mulesoft

MuleSoft MCD Level1

Workato

Workato Pro 1

Workato Pro 2
