Summary

A seasoned Full-Stack Developer with over 9 years of experience in designing, refining, and deploying complex web applications across multiple industries. My expertise spans .NET, C#, Angular, React, SQL Server, Entity Framework, Azure, AWS services, and a range of other cutting-edge technologies. I have a proven track record of working with diverse clients to deliver tailored solutions that meet their unique needs. Authorized to work in the US for any employer.

Experience

SENIOR FULL STACK DEVELOPER

Appsvolt Inc - NY

March 2018 to Present

In my tenure at Appsvolt Inc, I contributed to multiple projects and steered a number of development teams through the complete software lifecycle.

Responsibilities:

- Developed robust web applications using .NET Core and C#.
- Created dynamic front-end interfaces with Angular and React, ensuring optimal user experience and performance.
- Implemented responsive web designs using advanced CSS techniques and frameworks like Bootstrap.
- Designed relational and non-relational database schemas, optimizing for performance and scalability.
- Experienced in database versioning and migration strategies using tools like Entity Framework migrations.
- Configured and managed NHibernate for applications with multiple database backends, demonstrating flexibility in data management.
- Implemented complex mappings and transactions in NHibernate, adhering to enterprise-level data integrity and consistency standards.
- Applied Domain-Driven Design (DDD) principles to align complex application development with business requirements.
- Developed and maintained N-tier architectures to separate concerns and improve code manageability.
- Integrated Azure and AWS cloud services for efficient development workflows and scalable deployments.
- Utilized design patterns like Repository, Unit of Work, Factory, and Singleton to create modular, testable, and efficient code.
- Proficient in profiling and optimizing application performance, both on the client-side (Angular, React) and server-side (.NET).
- Implemented caching strategies and asynchronous programming to enhance application responsiveness and throughput.
- Orchestrated DevOps pipelines using tools like Jenkins, Azure DevOps, and GitHub Actions for continuous integration and delivery.

- Managed containerization and orchestration using Docker and Kubernetes, enhancing application scalability and deployment efficiency.
- Automated build and deployment processes, reducing manual errors and decreasing deployment time.
- Enhanced application security using modern authentication and authorization techniques.
- Designed and implemented RESTful APIs, and managed data exchange using JSON and XML.
- Conducted unit and integration testing using NUnit, xUnit, and Jasmine.
- Utilized Entity Framework for ORM, coupled with SQL Server for database management.
- Established CI/CD pipelines using Azure DevOps and AWS CodePipeline.
- Worked within Agile methodologies, focusing on continuous integration and rapid delivery.
- Enforced security best practices in application development, including secure coding, data encryption, and OAuth 2.0 for authentication.
- Conducted regular code reviews and security audits to ensure compliance with industry standards.
- Mentored junior developers, providing guidance in advanced programming techniques and industry best practices.
- Collaborated with cross-functional teams, including product managers, designers, and QA analysts, to ensure cohesive project execution.

FULL-STACK DEVELOPER

Intellectsoft - NY

March 2015 to February 2018

Responsibilities:

- Engineered scalable and efficient APIs using .NET Framework and .NET Core.
- Developed single-page applications (SPAs) using Angular and React, incorporating state management patterns.
- Collaborated in upgrading and maintaining legacy systems to modern .NET solutions.
- Utilized NHibernate ORM for mapping .NET classes to database tables, ensuring efficient data access and manipulation.
- Adopted a component-based architecture in Blazor to create reusable UI components, improving development efficiency and maintainability.
- Managed complex data operations in Razor Pages applications, including data validation, binding, and server-side logic implementation.
- Implemented cloud solutions using AWS and Azure, including serverless architectures, to optimize cost and performance.
- Skilled in cloud-native application development and leveraging cloud services for storage, computing, and security.
- Deployed applications on cloud platforms including Azure and AWS, setting up efficient development and deployment pipelines.
- Implemented coding standards and best practices within teams to maintain high-quality, maintainable code.
- Integrated static code analysis tools and code linters in the development process to enforce code quality checks.
- Created responsive and interactive web interfaces using HTML5, CSS3, and JavaScript.
- Provided end-to-end technical support and consultancy to a diverse range of clients.
- Implemented database solutions using SQL Server, and handled data with Entity Framework.
- Maintained detailed documentation for software architecture, code, and project management.
- Worked closely with diverse teams comprising product managers, designers, and quality assurance analysts to ensure seamless execution and coordination of projects.

Education

- Bachelor of Science: **Computer Science:** Sep 2010 – Feb 2015
Pace University - NY - New York, NY

Skill Highlights

- .NET Core
- C#
- ASP.NET
- Angular
- React (Redux, ContextAPI)
- SQL Server
- Entity Framework
- Azure
- AWS services
- NHibernate
- Web Design (CSS, Bootstrap)
- Domain-Driven Design (DDD)
- N-tier Architectures
- Design Patterns (Repository, Unit of Work, Factory, Singleton)
- Performance Optimization (Profiling, Caching, Asynchronous Programming)
- DevOps (Jenkins, Azure DevOps, GitHub Actions)
- Containerization and Orchestration (Docker, Kubernetes)
- Build and Deployment Automation
- RESTful APIs
- JSON and XML Data Exchange
- Unit and Integration Testing (NUnit, xUnit, Jasmine, Selenium, Cypress, Mocha)
- Security (Authentication, Authorization, Secure Coding)
- Mentoring and Collaboration Skills
