

IDREES MOHAMMED

Technology-Driven Innovation Leadership

PROFESSIONAL SUMMARY

Technology-Driven Innovation Leadership with over 19 years of extensive expertise in leadership, data analytics, and AI. Renowned for pioneering technology-based solutions that transform business strategies and enhance organizational efficiency globally. Adept at fostering collaborative teams and strategic partnerships to drive impactful innovations in healthcare, logistics, and infrastructure projects.

EMPLOYMENT HISTORY

FOUNDER AND CEO

The Cloud Intelligence Inc.

Feb 2023 - Present

Atlanta, GA, USA

- ◆ Lead innovative AI projects enhancing healthcare and logistics solutions.
- ◆ Midoc – AI Powered healthcare platform – from ideation phase to delivery.
- ◆ Managed product development from concept to market deployment.
- ◆ Established strategic partnerships for industry expansion.
- ◆ Guided teams to deliver impactful solutions in healthcare and asset management.
- ◆ Drive strategic partnerships and product innovation for SMSA Store2Door, SMSA Queuing, and Anfas iTrack, positioning them as vital industry tools.
- ◆ Oversee end-to-end project execution, from concept to market deployment. Analyze market trends to guide expansion strategies in healthcare and logistics.
- ◆ Foster cross-functional teamwork to develop cutting-edge solutions. Cultivate partnerships to enhance product offerings and market reach.
- ◆ Pioneer AI integration in healthcare, logistics, and asset management. Continuously explore new technologies to solve complex industry challenges.

DIRECTOR AND CHIEF TECHNOLOGY OFFICER

Virtus IT India Private Limited

Sep 2017 - Present

Hyderabad, India

- ◆ Taken up the Directorship in September 2017 and stake holding partnership in previously worked company Virtus IT U.K. to start working for the products and technologies built over the past 5+ years of my tenure under the capacity of lead and technical architect. Virtus IT is currently part of 2-Pan European Projects implementing the Big Data Platform for the research projects that address the objective of improving rail, road, and air infrastructure of the entire Europe. These projects are run under the consortium of 13 companies with different expertise and responsibilities. The two main projects that we are mainly contributing are the Horizon2020 and GoSafe-Rail Project. Lead Pan-European projects implementing Big Data Platform for rail, road, and air infrastructure improvement, collaborating with 13 consortium companies.

DIRECTOR AND CHIEF TECHNOLOGY OFFICER

StreamCentral Data Insights Limited

Feb 2018 - Apr 2019

London, U.K.

- ◆ Brought data from various data sources including Enterprise Solutions, Relational Databases, Web Services, Share Point Lists and Documents, Excel and CSV.
- ◆ Implemented Modern big data platform based scalable solution in Careys PLC U.k. (London, United Kingdom).
- ◆ Worked with cross-functional teams at client location - Careys, achieving key project milestones and improving stakeholder engagement for identifying KPIs, KRAs.

- ◆ Worked with data ingestion, data processing using Microsoft Azure - ADLS, Pipelines, Azure Data Factories to ingest the data from nearly 8 solutions.
- ◆ Technologies used include Azure Data Factory, Azure Data Lake Store, Azure Data Lake Analytics, Azure Data Factories, Power BI, Redis Cache, Node JS, Micro Services, Rabbit MQ.

CHIEF OPERATIONS OFFICER – INDIA OPERATIONS

Dec 2015 - Feb 2018

Flo Data Services India Private Limited

London, U.K.

- ◆ Lead the development of the product Flolive – a solution that comprises of building complete ecosystem for entire IoT solutions. The product brings the core network (IMSI Boot Strapping, eUICC Management, IMSI Management, Provisioning and Profiling) in the cloud provided as a service, device management, connecting sensors and gateways through cellular connectivity.
- ◆ Technologies used in developing the solution includes Azure serverless Functions (Node.JS), Azure Web App (Angular, HTML 5, Node.JS), MongoDB, Neo4j Db, Redis Cache
- ◆ to the cloud in sending the data securely, IoT Real Time Analytics, Alerts and Notifications, Predictive Maintenance or Pattern Identification.
- ◆ Led strategic initiatives for India operations, driving innovation and growth. Streamlined processes, resulting in substantial efficiency gains and improved customer satisfaction.
- ◆ Optimized operational workflows, reducing costs and enhancing productivity. Implemented data-driven decision-making strategies, leading to measurable performance improvements.
- ◆ Fostered cross-functional teamwork, aligning departments to achieve company goals. Developed strong partnerships with key stakeholders, enhancing overall business outcomes.

SENIOR TECHNICAL ARCHITECT

2012 - 2015

VIRTUS IT India Private Limited

- ◆ Led cutting-edge architectural solutions, driving digital transformation and enhancing system scalability for diverse client projects.
- ◆ Optimized IT infrastructure, reducing operational costs and improving system performance, resulting in substantial client satisfaction gains.

TECHNOLOGY SERVICES COMPANY AND INCUBATOR

2009 - 2011

CLEARWAY TECHNOLOGY PARTNERS

- ◆ Integrated GeoAnalyzer, SmartChart with SharePoint Online, enhancing data visualization capabilities.
- ◆ Facilitated strategic decision-making by enabling geographical data analysis.
- ◆ Utilized Microsoft Silverlight to improve data filtering and pattern recognition.
- ◆ Enhanced business insights through interactive applications, leading to better planning.
- ◆ Enabled users to identify data correlations, improving operational efficiency.

SDET

Oct 2007 - Oct 2008

Microsoft

Redmond, WA, USA

- ◆ Automated testing frameworks enhanced QA efficiency, collaborated on Office 365 testing.
- ◆ Boosted QA efficiency with automated frameworks, coordinated Office 365 test automation.
- ◆ Implemented testing automation, improved QA processes, engaged in Office 365 testing.
- ◆ Developed testing frameworks, optimized QA, executed Office 365 test automation.
- ◆ Streamlined testing processes, enhanced QA, collaborated on Office 365 automation.

SDE

2006 - 2007

Microsoft

Hyderabad, India

- ◆ Developed an installer for integrating Microsoft CRM Connector for Microsoft Axapta, Microsoft Great Plains, Siebel, and other CRMs.
- ◆ Automated the installation and configuration of BizTalk Server for CRM integration.

- ◆ Enabled cross-platform CRM integration with data synchronization between systems.
- ◆ Collaborated with CRM architects, BizTalk teams, and product managers to define integration points.
- ◆ o coordinate with complete Team of developers involved in execution.
- ◆ Take care of the setup code.
- ◆ Worked on Windows Installer XML to generate msi files.
- ◆ C# is used for developing the UI of the setup.
- ◆ C# code for validations of the pre-requisites of the setup.
- ◆ C# code for configuring the machine once setup is done to run the application.
- ◆ Fixing the bug by making changes to the code.
- ◆ Helped to design the setup design specifications.

MEMBER TECHNICAL STAFF, SENIOR MEMBER TECHNICAL STAFF

2005

HCL Technologies Pvt Ltd

Hyderabad, India

- ◆ Developed a team skilled in Microsoft interviews, enhancing candidate success rates.
- ◆ Established a self-learning community for Microsoft tech, fostering independent growth.

EDUCATION

M. TECH

2009 - 2011

Osmania University

Hyderabad, India

Completed the M Tech with Computers as especialization.

MCA

2002 - 2005

Osmania University

Hyderabad, India

Completed the Masters with Computer Science

B. SC (COMPUTER SCIENCE AND ENGINEERING)

1999 - 2002

Osmania University

Hyderabad, India

SKILLS

AI, Big Data, IoT, Azure Cloud, Strategic Innovation, Product Development, Digital Transformation, Cloud Computing, Machine Learning, Data Analytics, Software Architecture, Project Management, Leadership, Business Strategy, Mobile Development, Web Development, Database Management, API Integration, DevOps, Agile Methodologies.

LANGUAGES

English (*Native*), Hindi (*Native*), Telugu (*Native*).

ADDITIONAL INFORMATION

AREA OF EXPERTISE

- AI Integrated Cloud web and mobile solutions
- IoT based enterprise solutions
- Azure Cloud native Enterprise Solutions
- Big Data with Digital Transformation Strategy

- Enterprise scale web-based solutions
- B2B / B2C Mobile and Web based Applications
- Industrial IoT (Web)
- Event Processing (Big Data)
- Data Warehousing
- Enterprise Collaboration Platforms

KEY PROJECTS

• **midoc – AI Powered Healthcare App**

midoc is an AI-powered, patient-centric healthcare platform developed by The Cloud Intelligence Inc. It is designed to streamline healthcare delivery by enhancing communication between doctors and patients. The app enables patients to manage their health records by digitizing scanned labs and prescriptions into meaningful information, schedule appointments, and input key information such as their chief complaints and HPI (History of Present Illness) ahead of consultations. This allows doctors to focus more on diagnosis and treatment, reducing administrative overhead.

The platform also offers features like sharing unified medical records via a URL for obtaining second opinions, dynamic professional badge generation for doctors, and the ability to customize patient visits. midoc is available on both iOS and Google Play stores, making it accessible to a wide audience.

The midoc AI-powered healthcare platform utilizes a range of cutting-edge technologies to deliver a seamless user experience. It is built on **Microsoft Azure** infrastructure, integrating **Azure AI Studio** (ChatGPT-4, Claude LLM) and **NC4 GPU-based Linux servers** for advanced model deployment using **Hugging Face**. The backend comprises **Python-based web services** and **Azure Function App** for .NET Core-based microservices, along with **Azure Web Services** powered by **.NET Core**. On the frontend, the platform uses **React/React Native** to develop mobile apps for both Android and iOS. Key integrations include **SendGrid** for email services, **Stripe** for payment processing, in-app purchases, and **Apple Pay**. Additionally, the platform supports mobile notifications to enhance user engagement and interaction.

As **CEO/CTO** in the development of **midoc**, my role encompassed both strategic leadership and technical oversight to ensure the successful execution and delivery of the AI-powered healthcare platform. As **CEO**, I drove the overall vision, mission, and growth strategy of the company, focusing on GTM and Initial traction, investor relations, and partnerships, particularly in the healthcare sector. I oversaw cross-functional teams, ensuring alignment with our business goals and managed key stakeholder relationships to foster collaboration and accelerate product adoption.

In my capacity as **CTO**, I led the technical architecture and innovation behind **midoc**, making crucial decisions related to technology stack selection, cloud infrastructure, and AI integration. I guided the development team through the entire product lifecycle—from research and design to development, testing, and deployment—ensuring the platform was scalable, secure, and compliant with healthcare industry standards. I also played a key role in implementing **Microsoft Azure** infrastructure, integrating **AI models** like **ChatGPT-4** and **Claude LLM**, and establishing critical features such as AI-assisted diagnosis, prescription generation, and unified medical records management.

My dual leadership position required balancing both high-level strategic planning and hands-on technical execution to deliver a robust, patient-centric healthcare solution.

• **iTrack Solution for Anfas Medical Care, Riyadh, IoT based Hand Hygiene and Asset Tracking**

The Cloud Intelligence Inc. has developed a comprehensive IoT-based asset tracking solution for Anfas Medical Care in Riyadh, designed to efficiently track both movable and non-movable assets within the healthcare facility. This solution enhances operational efficiency by enabling real-time monitoring and tracking of assets such as wheelchairs, medical devices, hospital beds, and other critical equipment. By providing an accurate overview of asset locations, staff can quickly retrieve necessary equipment, reducing delays in medical care and improving resource management.

A unique feature of this solution is its ability to track the hand hygiene status of staff entering guest and patient rooms. This feature is crucial for ensuring compliance with hygiene protocols, which are vital in healthcare settings to control infections and maintain high standards of

patient care. The system provides real-time monitoring and generates compliance reports, enabling administrators to assess staff adherence to hygiene standards and identify areas for improvement.

In addition to asset tracking and hygiene monitoring, the solution also assists in maintaining records of asset maintenance. It offers automated scheduling of maintenance activities and keeps a detailed history of all maintenance tasks, such as repairs, inspections, and replacements. This ensures that equipment is always in optimal condition and helps avoid unexpected downtime, which is critical in a healthcare environment where asset reliability is paramount.

The solution is integrated with the latest facility floor plans, accessible via a web interface. This feature allows users to visualize asset locations in real-time on the map, making asset management more intuitive and providing administrators with a clear overview of the facility's asset distribution. The web interface simplifies navigation and interaction with the system, making it easy for staff to access information when needed.

Technologically, the solution is deployed on Microsoft Azure Cloud, ensuring scalability, security, and high availability. It leverages Azure Serverless Functions to handle backend processing and manage asset-tracking events in real-time, without the need for dedicated server infrastructure. The Azure IoT Hub enables secure and reliable communication between IoT devices deployed across the facility, ensuring that data is continuously monitored and transmitted. Azure Web Apps provide the platform for hosting the user interface, while Azure SQL serves as the backbone for storing all asset data, including maintenance records and hygiene compliance logs.

In summary, this IoT-based asset tracking solution delivers significant operational benefits to Anfas Medical Care, streamlining the tracking of assets, improving hygiene compliance, and ensuring proactive maintenance of equipment. By utilizing the power of the Azure Cloud, the solution is not only scalable but also capable of meeting future needs as the healthcare facility grows or new functionality is required.

- **Store2Door Implementation for SMSA Express**

SMSA Express wanted to develop new Store2Door Application to match market demand with state-of-art design, latest technological features, and more services to end-users. The objective is to provide easy to use customer applications with the ability to perform key business functions seamlessly with great user experience.

A much-needed solution requirements from a client that enables the local country users to buy products online from any other country and get them shipped to the local address. All you need is to shop online from any merchant of whichever country you need it and then get it shipped to your address - all seamless experience without any hassle and worry about logistic management, vendor searching etc., Provides completes transparency and visibility of shipping by means of providing the Mobile Application solution to keep everything tracked in your fingertips.

Been responsible to engage the client right from the beginning when RFB is shared including the pricing, technical proposal, estimates, agreeing on milestone, then building the team for the work from scratch, providing technical solution and architecture, setting up the infrastructure – Azure Cloud, Git Hub, DevOps, Pipelines, Release Plans. Working with different team leads – Mobile Development, Database Development, API and Web Application with proper definition of the sprints, engaged client in agreeing to technical solution, understanding the expectations of the solutions and the delivery.

- SMSA Queuing Implementation

- FutureTech ERP Solution

- **Wove – FinTech Solution**

WorkSave is a start-up entity working on their upcoming innovative product that evolves around the idea of enabling the marketplace for hyper local supermarkets, small or medium scale restaurants for customer recognition and enabling them to use the loyalty program and easy cash back. It has all abilities to on-board merchants, set their discount %, connect or campaign their customer base for day special discounts or offerings, keep up the customer for their loyalty etc., This app witnessed integrations with lot of financial technologies for securing payments, fetching secured data, making easy payments etc.,

Been responsible to engage the client in setting up the offshore team for the purpose of the development. Privileged to be the co-founder of the product and hence managed all aspects related to the offshore team management from operations to technical delivery. Also coordinated and participated in setting up the infrastructure – Azure Cloud, Git Hub, DevOps, Pipelines, Release Plans. Working with different team

leads – Mobile Development, Database Development, API and Web Application and be the scrum master for the offshore product development. This has been wonderful experience working with too many entities like swipe, Fidel etc. to build one of the classes FinTech App targeting UK customers.

• **Implementation of Big Data Solution for Careys PLC**

Solution is to bring together all the “at-rest” data that an organization uses into one data store. Actionable insights are always uncovered when data is brought together in this way, resulting in cost reduction, process improvement, and new market/sales/product opportunities. This data will be joined up, enriched with information about Time and Location, connected to all relevant business entities in the data (Person, Department, Company, Asset, etc.), and standardized – a full 360-degree view of all aspects of your business is delivered. This significantly enhances the value that can be extracted from data and ensures that you can maximize the return on any investment that may have been made in Data Analytics / Data Visualization tools.

My roles and responsibilities include complete operations of India for the purpose of the development of the solution. This also includes understanding the business requirements and translating them in the technical requirements, High level design of the solution, managing the development and to be the responsible for the delivery of the product.

Successful implementation of the project in **Careys PLC, U.K** to build unified source of truth by data ingestion configuration to pull the data from various sources including SQL server based relational databases, Rest and Soap based API with secure OAuth authentication, SharePoint, Excel and CSV documents etc. The data then has been provisioned to be synchronized to the Microsoft Azure Data Lake Store. Azure Data Lake Analytics are used specifically with USQL scripts to prepare the Operational Data Store. Similarly, ADF pipelines are orchestrated and scheduled to build the data synchronous mechanism between the Data Lake Store and Operational Data Store. This implementation typically composed with handling structured and non-structured data.

• **Yara IoT Platform Evaluation**

Yara provides fertilizers for agricultural farmland owners close to 4 million hectares and were looking to invest in building the IOT product that could help farmers use the fertilizers. My role was to evaluate and compare the offer made the solution provider for the digital platform based on vendors reference architecture between Amazon AWS and Microsoft Azure. Below are the technologies under question for the evaluation of the offer and proposal.

1. Data sources services provided by vendor (Weather data, Farm data, Satellite imagery)
2. Data Services include a number of Analytics Services (Kafka, Watson IoT, Python, Batch ingestions)
3. Data lake technologies including Hadoop, HBASE etc.
4. Analytical and Cognitive services (Watson Studio, Python, Spark, Jupiter)
5. API management.

• **FloLive IMS Management Solution**

The FloLive IMSI Management Solution is designed to efficiently manage International Mobile Subscriber Identity (IMSI) data across various mobile networks. It provides a cloud-based platform that allows mobile operators to allocate, track, and manage IMSI numbers dynamically, improving operational efficiency. The solution supports seamless switching between mobile operators and offers enhanced control over IMSI assignments. With the ability to support global connectivity and roaming services, the solution caters to enterprises with IoT devices that require flexible, scalable, and secure network connectivity. This ensures cost-effective, reliable, and always-on mobile communication across regions.

• **Live Monitoring and Tracking of Manufacturing Plants**

This project leverages IoT and Microsoft Azure to provide real-time monitoring and tracking of manufacturing plants. It integrates IoT sensors with Azure IoT Hub and Azure Cloud services to capture data from various machines and processes in a manufacturing facility. The solution tracks equipment status, production rates, energy usage, and potential maintenance issues. With advanced analytics and dashboards, plant managers can monitor operations remotely, optimize production efficiency, reduce downtime, and predict equipment failures before they occur. The solution also supports alerts for critical thresholds, ensuring timely responses to operational challenges.

- **Smart Kitchen Services Proposition**

This project proposed the integration of an IoT-based smart kitchen for Howdens, focusing on enhancing safety and convenience. Appliances such as kettles, stoves, microwaves, ovens, and locks are IoT-enabled and centrally governed. In the event of a fall involving the elderly or children in the kitchen, the system automatically turns off any running appliances, triggers an alert message to the designated guardian, and activates video surveillance for remote monitoring. This innovative solution was designed to ensure safety and peace of mind and was deployed on the Microsoft Azure Cloud platform.

- **Streaming Video QoE on LTE Networks**

This project addresses the Quality of Experience (QoE) for streaming video over LTE networks. It focuses on enhancing the end-user experience by analyzing network conditions such as bandwidth, latency, and packet loss during video streaming. Using real-time data analytics, the solution ensures that video quality is adjusted dynamically based on network performance, reducing buffering times and improving playback quality. It incorporates adaptive bitrate streaming techniques and leverages LTE network optimization to maintain a seamless viewing experience. The solution is designed to cater to video service providers and mobile network operators, ensuring consistent QoE across devices and locations.

- **Fuzed – Enterprise Collaboration Platform**

Fuzed while focusing on connecting people, also recognizes the importance of information that people are sharing. So, while features like groups, group messaging, micro blogging, content sharing and search are important, better ways of consuming information and connecting related and relevant information together are equally important to power the enterprise knowledge network and make it more productive. The image below compares Fuzed with two existing established enterprise “social networks” available today to show the power of connected information.

Fuzed lets users in a group connect related and relevant pieces of information together, regardless of the type and source of information. This allows all users to know that when viewing the PowerPoint, they should also read the two additional articles or reports or a forecast that contributed content to the PowerPoint. Just like that, information is turned into knowledge.

Fuzed is free for your entire company, enabling users to collect, connect and share information like never before. Fuzed reduces information overload allowing people to know why a piece of information is important along with all the other pieces of information collected previously or in the future that are relevant to look at when viewing that piece of information. Imagine seeing a “Company Quarterly Update” PowerPoint knowing that the data came from that exact spreadsheet, that report while the following three links provide insight into market outlook. Anyone viewing the PowerPoint instantly knows the relevancy of the rest of the information. In other networks, these items would be scattered and appear completely unrelated.

- **Customer Quality of Experience (QoE) for Vodafone**

This project focuses on measuring and enhancing the Customer Quality of Experience (QoE) for Vodafone's telecommunications services. It involves real-time data analysis to understand customer satisfaction, network performance, and service delivery quality. By leveraging key metrics like network speed, call drop rates, and data usage patterns, the solution helps Vodafone identify areas for improvement and enhance overall customer satisfaction. The system is designed to proactively address issues, ensuring optimal service delivery while improving customer retention through data-driven insights and continuous monitoring of network quality.

- **Contract and Opportunity Analytics for Zebra**

The Contract and Opportunity Analytics project for Zebra Technologies is aimed at optimizing the company's sales and contract management processes. The solution involves analyzing contract data and sales opportunities to identify key trends, gaps, and growth areas. By using advanced analytics and machine learning, the project helps Zebra assess the performance of contracts, predict revenue, and discover untapped opportunities in the market. The end goal is to enhance decision-making for contract renewals and new business opportunities, leading to increased efficiency in sales operations and improved customer engagement.

- **M-Commerce Big Data based E-Commerce Solution**

This project focuses on building a big data-driven mobile commerce (M-Commerce) solution for an e-commerce platform. It uses advanced data analytics to track user behavior, purchase patterns, and preferences across mobile devices. By harnessing the power of big

data, the solution delivers personalized recommendations, targeted marketing, and seamless shopping experiences for customers. The project integrates with various data sources to offer real-time insights, improve customer engagement, and increase conversion rates. The system's scalability ensures it can handle large volumes of traffic and transactions, making it ideal for dynamic e-commerce environments.
