

JYOTHI ARGE

Contact: +1 248-662-7453 | Email: jyothiarge@gmail.com | [Linkedin](#)

SUMMARY

Detail-oriented Data Analyst with a strong foundation in Python, SQL, Excel Power Query, and Power BI. Skilled in acquiring, cleaning, transforming, and analyzing data to drive strategic insights. Proven ability to automate manual processes, develop dashboards, and identify patterns in complex datasets. Effective communicator with cross-functional collaboration experience and a results-driven mindset.

PROJECTS

AI-Powered Sales Forecasting Model

Tools: Python, scikit-learn, Excel

- Collected and preprocessed two years of sales data across regions using Pandas.
- Engineered features like seasonality, holiday periods, and marketing campaigns.
- Built a Random Forest Regressor to predict next-month sales with >90% accuracy.
- Deployed insights into Excel dashboards with trendlines and confidence intervals.

Executive-Level Retail KPI Dashboard

Tools: Power BI, Power Query, DAX

- Cleaned and merged multi-store sales and returns data using Power Query.
- Created visualizations for key metrics: conversion rate, average basket size, return % by category.
- Built slicers for region, product line, and store type to enable drill-down analysis.
- Used DAX to create dynamic benchmarks and YoY growth visuals.

Automated Feedback Analyzer (NLP)

Tools: Python (NLTK/TextBlob), BeautifulSoup, Power BI

- Scraped customer reviews from product pages using BeautifulSoup.
- Processed the data to remove noise, then analyzed sentiment using TextBlob.
- Grouped reviews by product category, issue type, and sentiment score.
- Built a Power BI dashboard showing sentiment trends over time and flagged products with high negative feedback.

Inventory Optimization Tool

Tools: Excel, Power Query, VBA

- Built a dynamic inventory dashboard for a fictional retail chain.
- Used Power Query to fetch inventory and sales data, and created reorder point logic using VBA.
- Included alerts for low-stock SKUs and a visual "traffic light" system for stock health.

End-to-End ETL Pipeline for Product Insights

Tools: SQL, Python (ETL), Power BI

- Pulled raw data from multiple SQL databases, cleaned and transformed using Python (pandas, NumPy).
- Loaded clean data into Power BI for category-level analysis of returns, pricing anomalies, and profit margins.
- Scheduled pipeline automation via Python scripts + cron jobs (or Windows Task Scheduler).

CORE COMPETENCIES

Data Cleaning & Transformation: Power Query, Python (Pandas), Excel

Data Visualization & Reporting: Power BI, Excel Dashboards, KPI Metrics

Database & Automation: SQL, VBA Macros, Python Scripting

Analytical Techniques: Trend Analysis, Pattern Recognition, Root Cause Analysis

Tools & Tech: Python, SQL, Power BI, Git, Jupyter, Excel, Adobe Acrobat DC

Soft Skills: Communication, Time Management, Results Orientation, Stress Management

EXPERIENCE

ENT Matrix, Inc. Maryland, USA

Jul 24 –Present

Software Engineer

- Developed Python scripts to automate data extraction and log parsing, reducing issue resolution time by 40%.
- Utilized Excel's Power Query to clean and reshape large datasets for management reporting.
- Identified key error patterns through trend analysis of system logs, helping improve backend system stability.

- Collaborated with cross-functional teams to optimize data integration workflows and improve reporting accuracy.
- Built internal troubleshooting documentation that reduced support queries by 25%.
- Supported backend testing by generating synthetic datasets and validating input-output consistency.

Model N, Hyderabad, India
Operations Analyst

Jun 21 – Sep 22

- Streamlined internal reporting by applying Python to merge and format multi-source datasets.
- Partnered with QA and DevOps teams during UAT to capture and analyze feedback, improving product readiness.
- Leveraged Excel and SQL to generate actionable insights on contract performance and revenue metrics
- Provided data-driven support during the integration of a new revenue management system, ensuring smooth adoption.
- Initiated a weekly KPI trend report that improved stakeholder visibility into product usage and system errors.

Cognizant, India
Senior Process Executive

Jun 18 – May 21

- Analyzed backend logs to detect recurring data errors and provided mitigation strategies, reducing downtime.
- Created a macro-enabled Excel tool to automate monthly SLA performance tracking.
- Coordinated with IT and business teams to align automation goals with process bottlenecks, boosting efficiency.
- Delivered bi-weekly reports on client system performance using Excel dashboards and root cause summaries.
- Contributed to process optimization projects that improved TAT (Turnaround Time) for ticket resolution by 15%.

EDUCATION		
Masters in Information Studies		GPA-3.7/4.0
Trine University, Michigan, USA		Oct'22-May'24
Bachelors in Mechanical Engineering		GPA-3.2/4.0
TKRCET, Hyderabad, India		Sep'14 – Apr'18
