OBJECTIVE: Aiming to utilize communication skills from medical school, research experience, data programming skills from Google Data Analytics Course and machine learning algorithms from Stanford Supervised ML Course to pursue careers in data analysis

TECHNICAL SKILLS: Microsoft Office, MS Excel, MS Powerpoint, SQL, Python, R, Power BI, Tableau, EPIC EHR, REDCap, ML/AI

EXPERIENCE

Research Assistant, Federal Work Study

Jun. 2021 – Jul. 2021

Department of Anatomy, School of Osteopathic Medicine, Midwestern University IL

- Utilized immunohistochemistry to produce clear, appropriately stained microscopic slides of mouse lung tissue
- Part of a project focused on 4NQO-induced histopathological changes to evaluate and better understand the incidence of oral squamous cell carcinoma in relation to a mouse's diet and sex

Neurology Research Technician

Oct. 2019 – Aug. 2020

Department of Neurology, School of Medicine, Washington University St. Louis

- Scoured EPIC electronic medical charts to find multiple sclerosis (MS) patients with similar demographics and organized the matched subjects into an Excel Sheet. Used ETL processes to add and modify patient info into a REDCap database to ensure proper data management. Respective blood and CSF samples were obtained within a biorepository to test the accuracy and precision of an ELISA immunoassay kit known as SIMOA
- Used computer science to update and refine the lab's homepage on washu.edu
- Measured and compared biomarkers such as CD3+ T lymphocytes, CD19+ B lymphocytes and CSF neurofilaments via flow cytometry to discover new diagnostic parameters of MS

PROJECTS

Adrenal Tumor Case Study (Python, Power Business Intelligence)

Feb. 2025 - March 2025

- Ad-hoc analysis of prognostic markers and demographics to report which factors indicate increased mortality and reduced survival time for patients w/ adrenocortical carcinoma, pheochromocytoma and neuroblastoma
- Used Python Pandas for data transformation of secure TCGA and NCI datasets and execute t/z test statistical analysis
- Constructed bar charts, scatterplots and pie charts in Power BI as a data modeling tool to illustrate sample distribution

Contagious Disease Case Study (SQL/BigQuery, R, Tableau)

Jan. 2025 - Feb. 2025

- Examined the epidemiology of the top 10 US non-COVID infectious agents by conducting data mining of a verified CDC dataset from 2022-2024 to better understand how to reduce infection rates
- Used relational database BigQuery to construct data queries that reorganized the CDC data into various tables
- Created boxplots, heat maps and line charts on Tableau and scatterplots in R to provide a proper data visualization of the cases of each infectious agent based on State, Time, Seasons and US Census divisions
- Used R to perform trend analysis and root-cause analysis to understand the source of infectious transmission

Video Game Case Study (Microsoft Excel, Microsoft Powerpoint, Tableau)

Jan. 2025

- Compared high grossing free to play (FTP) and pay to play (paid) games to determine what factors increase revenue
- Implemented data extraction of 2020-2024 Gamalytics dataset of the top 100 Steam games and portions of Kaggle tables with good data governance and data integrity onto Excel
- Performed data manipulation w/ functions such as VLOOKUP, pivot tables and complex formulas on Excel to create an organized data structure and presented data insights w/ Powerpoint
- Produced stacked bar charts, line charts, histograms and pie charts on Tableau to visualize and analyze how Genre, Review Score, Publisher Class, Release Year and Copies Sold impacted the revenue of FTP and Paid games

EDUCATION

Midwestern University, Chicago

Graduated August 2024

Doctor of Osteopathic Medicine

Saint Louis University, Saint Louis MO

Graduated May 2019

Bachelor of Science, Biology

GPA: 3.80, Magna Cum Laude
