SUMMARY

With over 13 years of proven experience in enterprise software development, Successfully built multiple new projects from scratch and extended dozens of existing legacy solutions. Proficient in C#, .NET Core, and .NET with extensive experience in modernizing legacy systems using microservices architecture, Docker, and Kubernetes for optimized deployments. Adept at implementing cloud solutions using AWS and Azure while fostering innovation within Agile development environments. Passionate about mentoring teams and delivering impactful solutions across healthcare, finance, and enterprise technology sectors.

EXPERIENCE

Senior .Net Full Stack Engineer

02/2021 to Present

Comcast, Philadelphia, PA, Remote

- Led the modernization of a Comcast Identity Management System-CIMS and Account Management Portal-AMP using **C#**, **.NET** and **React /Angular/TypeScript** for frontend.
- Developed Comcast's modern software suite in **.NET 8** with **Azure Serverless Architecture** with a **React** frontend, resulting in a +29% improvement in system performance, as evidenced by a 23% reduction in response times and a 17% increase in system reliability.
- Migrated legacy applications from on-premises servers to **Azure**, significantly reducing infrastructure costs and enhancing system availability.
- Reduced system downtime by +13% and decreased the number of support tickets by 22% after revamping Comcast's 20-year-old software suite comprising two Classic **ASP** applications and 5 **.NET 2.0 WinForms** applications
- Implemented rate-limiting and authentication layers using **OAuth 2.0** and **JWT tokens**, protecting APIs from abuse while ensuring security.
- Migrated an on-premise **SQL** database to **Azure** and refactored a necessary **C# ASP.NET** app to run in **Azure App Service** used by four different teams.
- Refactored and optimized **SQL** Server database schema, leading to a 17% increase in system reliability and a 22% improvement in query execution time.
- Implemented a distributed caching layer using **Redis** and **Azure Cache** for Redis, reducing load on primary databases and improving data retrieval speeds.
- Designed, built, and optimized microservices architecture using **.NET Core 6 / 8**, **Azure Functions**, and **AKS**, reducing technical debt and improving system resilience.
- Contributed to multiple projects, creating branding and promotional applications for company contests. Utilized **Oracle** and **SQL Server** databases.
- Optimized cloud resource allocation with **Kubernetes**, leading to better workload distribution, autoscaling, and cost efficiency.
- Leveraged **Sitecore** pipelines and dependency injection to extend platform functionality for marketing teams.
- Involved in the Design, Development, and Testing of **Windows Forms**, **Web Forms**, and Web Services using **IIS**, **ASP.NET**, **XML Dataset**, and **.NET Framework**.
- Optimized complex SQL queries, data modeling, database index tuning, the creation of views, procedures, functions, users, and roles, granting and revoking permissions, schema and tablespace, select system tables, **PL/SQL** script, cursors, and others.
- Established **CI/CD** pipelines using **Azure DevOps**, enabling automated builds, testing, and deployments, reducing deployment times by 18%.
- Enabled multi-region database replication using **Azure SQL Database** and **Cosmos DB**, ensuring high availability and disaster recovery readiness.
- Developed high-performance REST APIs and **GraphQL** services to power CIMS, improving response times by 23% and increasing data availability.
- Created CIMS technical roadmap that consists of uplifting security and modernizing **authentication** and **authorization**, updating legacy dependencies, increasing security posture, modernizing pipelines, and building agents, among other deliverables.
- Built API gateways and middleware using **.NET Core**, ensuring secure, scalable, and reusable API interactions across various services.

- Implemented SSL/TLS encryption between the **Angular 14** frontend and **ASP.NET Core 6** backend to secure sensitive data transmissions..
- Redesigned and optimized UI components in **React** and **Angular**, improving usability, performance, and accessibility.
- Developed a unified UI component library using **Angular** to ensure consistent branding and UX across Comcast applications.
- Utilized **Angular**, **React** with advanced front-end libraries and frameworks like HTML5, CSS3, SCSS, and Bootstrap 5, delivering modern, responsive, and accessible user interfaces for CIMS and AMP.
- Refactored legacy jQuery-based UI components, modernizing them with **TypeScript** and **Webpack** for improved performance.
- Used **GraphQL** for efficient data handling and manipulation, improving application performance.
- Developed and maintained **WCF** services for secure data exchange, implementing SOAP-based communication for legacy system integrations within the CIMS platform, ensuring seamless interoperability and data integrity across distributed applications.
- Utilized **Blazor** Server for faster load times in administrative interfaces and **Blazor WebAssembly** for client-side performance in patient-facing applications.
- Extensively used **LINQ** and **ORM** tools like **Entity Framework** to exchange data between web applications and database objects.
- Developed and maintained **ETL** processes using **T-SQL** and **SSIS**, enabling efficient data extraction, transformation, and loading from various sources.
- Developed dynamic, user-friendly reports with SQL Server Reporting Services (**SSRS**) to provide comprehensive data insights for business stakeholders, reducing report generation time by 30%.
- Implemented **PowerShell** scripts to deploy migrated services into Azure Service Fabric and manage the lifecycle, including local development.
- Implemented DevOps methodologies and tools, including **Jenkins** and **GitLab**, to automate and optimize processes, including the implementation of CI/CD pipelines.
- Implemented Test Driven Development (**TDD**) using the **NUnit** Framework for unit testing and ability to load, explore and execute tests.
- Implemented Infrastructure-as-Code (IaC) with **Terraform** and ARM templates, automating cloud infrastructure provisioning across environments.
- Implemented serverless computing solutions using **Azure Functions** and **AWS Lambda**, reducing processing time and eliminating unnecessary background processes.
- Monitored application health and performance using **Azure** Monitor, Application Insights, and **AWS** CloudWatch, enabling proactive issue detection and resolution.
- Mentored and coached junior developers, providing guidance on **.NET** best practices, microservices architecture, and cloud technologies.

Senior .NET Engineer

03/2014 to 01/2021

Medtronic, Minneapolis, MN, Remote

- Developed web applications using **C#** and **ASP.NET**, following **MVC** architectural pattern and utilized .NET Core framework to build cross-platform applications.
- Reduced the client-facing webpage load time from 30+ seconds to only milliseconds by minimizing database round trips using **Entity Framework** for efficient stored procedure result-to-entity translation.
- Implemented new features to apps and wrote complex **SQL** Server queries, stored procedures, functions, and more.
- Enhanced performance by integrating **Elasticsearch** API, segregating transactions, and auditing data. Replaced multiple database read calls with a single Elasticsearch API call, significantly improving response times and reducing database load.
- Wrote, debugged, and maintained **T-SQL** server tables and stored procedures required to meet business needs. Also integrated Dapper to the **.Net Core** data layer project to execute these stored procedures easily.
- Developed the database model for the file import process using **SQL** Server. **T-SQL** was used for developing the script for the table structure and stored procedures.
- Created REST APIs and utilized Windows Communication Foundation (**WCF**) services for seamless data exchange, improving system interoperability by 23%.
- Developed third-party integrations with healthcare software providers, ensuring interoperability with **EHR** (Electronic Health Records) and compliance with HL7/FHIR standards.
- Implemented a secure patient portal using **React / TypeScript**, enhancing user experience and ensuring HIPAA compliance through robust type-checking and structured component architecture.
- Created a **Blazor** app to explore all the data fetched by Microsoft Orleans using **ASP.NET** Identity Server.
- Developed an Entity Framework Core infrastructure as a data persistence layer over **SQL** Server.
- Implemented a new version of checkout supporting recurring subscriptions for Medtronic using **React** and microservices

built in **.Node.js**, **TypeScript**, and **GraphQL**.

- Created reports with SQL Server Reporting Services (**SSRS**) and Datasets, aggregating data from various sources
- Covered Angular-driven web applications with end-to-end tests using Protractor, increasing UI feature test coverage by 30%.
- Developed scalable and dockerized back-end RESTful API services using **.NET Core**, **PostgreSQL**, **Redis** and **RabbitMQ**.
- Used **ADO.NET** and data objects such as Data Adapter, Data Reader, Dataset, Data table, and XML Text Reader Writer for consistent access to SQL data sources.
- Actively used cursors, functions and calling procedures from one package to another package and created dynamic SQL statements in **Oracle** using **PL/SQL** and **ADO.NET**.
- Set up project repositories and configured **CI/CD** pipelines with testing, quality check, and deployment scripts for development, staging, and production environments.
- Developed backend services in C# with **ASP.NET**, handling large-scale transaction processing and integrating with messaging systems like **RabbitMQ** and **Kafka** for real-time data flow.
- Wrote unit tests and integration tests using **xUnit** and **Selenium**, ensuring the robustness of **.NET** applications and high-quality code delivery.
- Implemented optimized **LINQ** queries in **Entity Framework** to efficiently retrieve and manipulate data from the database, enhancing application performance by 33% and reducing response times by 18%.
- Implemented **microservices** architecture using **Docker** and **Kubernetes**, improving deployment flexibility, and enabling efficient scaling of services.
- Contributed significantly to the complete migration of the product from **ASP.NET** to **Angular/.NET Core/ T-SQL** stack.
- Worked in a wide-area network to maintain all the device-related data in **PostgreSQL**, **Amazon RDS**, and **Oracle** databases.
- Implemented Azure services such as **Azure Functions**, **Azure Service Bus**, and **Azure Storage** for various application functionalities.

Software Developer

12/2012 to 02/2014

Concertium, San Diego, CA

- Leveraged UI expertise in **AngularJS** to troubleshoot existing UI issues and develop new user-friendly forms.
- Applied DRY & SOLID principles of software development making good use of OOP features such as abstraction, encapsulation, inheritance, and polymorphism Created software applications in a test-driven development (**TDD**) environment.
- Rewrote tons of stuff from jQuery and legacy CoffeeScript code to vanilla **JavaScript**.
- Implemented a real-time messaging service using **SQL** and **ASP.NET**, facilitating seamless communication between users during live sessions.
- Optimized the data access layer, reducing its size, resulting in a 13% improvement in data retrieval performance and reduction in database load times
- Implemented Single Sign-On (**SSO**) Solutions to provide common gateway for login
- Wrote Node.js routines to discover and convert millions of hyperlinks in **MongoDB**.
- Migrated code from the legacy VB6 system to new modules built in **VB.NET**.

EDUCATION

Bachelor of Science: Computer Science

09/2012

University of Miami

United States

SKILLS

- | | |
|--|--|
| <ul style="list-style-type: none">• Languages: C#, Python, Java, JavaScript, TypeScript, Node.js, SQL• .NET Technologies: .NET 2/4/6/7/8, .NET Core, ASP.NET, ASP.NET Core, ADO.NET, WCF, WPF, Web Forms, Win Forms, Entity Framework, Blazor, BizTalk• Web Development: Angular 9/11/14/16, React, GraphQL, jQuery• Tools: Git, TFS, GitHub, NPM, Webpack, Visual Studio, SendGrid, Windows Azure SDK, GitLab CI/CD, Subversion (SVN), Jira, Confluence, Slack | <ul style="list-style-type: none">• Libraries/APIs: REST APIs, Web API, jQuery, Sockets, Salesforce API, Node.js, Vue, React, CyberSource, Google Calendar API, Vuex, Windows Forms (WinForms)• Storage: Oracle SQL, JSON, PostgreSQL, Redis, Databases, MySQL, Amazon S3 (AWS S3), Elasticsearch, Oracle PL/SQL, Microsoft SQL Server, PL/SQL, Azure Active Directory, NoSQL, Azure Cosmos DB, MongoDB• Platforms: Azure, AWS, Docker, Kubernetes, Oracle, Azure DevOps, AWS Lamda |
