ABOUT

Hello, I'm Jashwanth, a **Certified MuleSoft Developer** with extensive experience in solving complex integration challenges using the MuleSoft Anypoint Platform. I specialize in building application networks through the API-LED Connectivity approach (Experience, Process, and Systems APIs). **With over 11 years** of experience in IT and software development, I've developed a diverse skill set across roles such as **Integration Specialist** and **Quality Assurance Automation Developer**. My focus is on creating and implementing robust integration solutions for cloud platforms, particularly for **Salesforce integrations**, utilizing technologies like **MuleSoft**, IBM and Oracle Technologies. I am passionate about delivering high-performance, secure, and scalable systems that ensure seamless application interoperability. As a team leader, I excel in guiding projects from initial concept through to successful deployment, ensuring that all integration solutions meet both business and technical goals efficiently and reliably.

SUMMARY

- Well versed with **MuleSoft 4.x** Anypoint Platform (CloudHub, API Manager, Anypoint Studio, Runtime Manager, Anypoint MQ).
- Experience in **Enterprise** and Community editions of Mule ESB.
- Proficient in communication protocols such as HTTP, REST, MQ, JMS, FTP, and SFTP.
- Proficient in data formats including JSON, XML, and CSV.
- Developed applications using Anypoint Studio and deployed/undeployed them on both Cloud Hub and on-premise environments.
- Expert in defining API Specifications using **RAML**, and well versed with Anypoint **Exchange** to publish the documentation along with mock services for business users.
- Proficient in common integration patterns such as Migration, Broadcast, Aggregation, Bi-directional Synchronization, and Correlation.
- Hands-on experience with MuleSoft **Connectors** (HTTP, Database, Transform, Anypoint MQ, JMS, File, Email, Object Store, Error Handlers, Choice Router, For Each).
- Experience in integrating with **Salesforce** and **Microsoft Dynamics NAV** system.
- Hands-on experience with 3rd party SaaS Connectors (**Salesforce**, Oracle, NetSuite, SAP, Google Drive, AWS S3).
- Excellent **SQL** knowledge and can write complex queries for data sources such as **MySQL**, **Oracle**, and SQL Server.
- Hands-on experience in implementing **Batch Processing** in MuleSoft to **bulk** upload CSV data to Salesforce.
- Hands-on experience in setting up **CI/CD** pipeline using Maven, GitHub, and Jenkins to **automate code deployments** from developer workstation to Cloud-Hub Runtime Manager.
- Strong project documentation expertise, with hands-on experience in creating various UML diagrams, including Component Diagrams, Use Case Diagrams, Activity Diagrams, and Sequence Diagrams.
- Proficient in **API testing and automation**, with hands-on experience in testing Service-Oriented Architecture (SOA) and automating web and mobile applications.
- **Skilled in using automation tools** such as UFT (Unified Functional Testing), Selenium WebDriver for efficient test execution and quality assurance.
- Worked as an offshore lead for gathering information from Client/BA and managed a team of 3/5 people.
- Exceptional verbal and written communication skills, with expertise in creating clear and **comprehensible Source-to-Target data mapping** documents for business users.
- Hands-on experience integrating multiple applications using Mule ESB. Utilized different connectors, **Transformations**, **Routing**, **Messaging** and **Exception handling** using Mule ESB to ensure robust and loosely coupled integration layer every time.
- Strong problem-solving abilities, consistently delivering effective solutions to complex business challenges.

TECHNICAL SKILLS

- **Technologies & Tools:** MuleSoft 4.x, API Manager, Anypoint Studio, Design Center, Runtime Manager, CloudHub, Anypoint MQ, Postman, REST, MUnit, Linux, UFT, Autosys, Hubspot,
- **Languages:** RAML, DataWeave, XML, JSON, C#, HTML, CSS, JavaScript, Python, Java, React, YAML, and SQL.
- **Analysis/Reporting Tools:** MS Word, MS PowerPoint, MS Excel,
- **Project Tracking, CI/CD Tools:** JIRA ALM, GitLab, Git, Maven, Jenkins
- **Misc.:** AWS, S3, Figma (UI/UX),

CERTIFICATIONS

- **Certified MuleSoft Developer 4 (MCD) Level 1**
- **ICAgile Certified Professional**

PROFESSIONAL EXPERIENCE

Role: Sr MuleSoft Developer

Client: RBC Bank - Toronto

Duration: March 2022 - Till date

Responsibilities:

- Designed and implemented strategic integration solutions using the MuleSoft Anypoint Platform to support DNB's digital transformation goals.
- Architected API-led connectivity solutions, ensuring scalable and reliable message flows, along with precise data mapping across systems.
- Led the end-to-end development and delivery of MuleSoft projects, consistently applying industry best practices in error handling, security, and performance optimization.
- Provided expert guidance across the software development lifecycle, advocating for MuleSoft methodologies and ensuring adherence to best practices and standards.
- Collaborated with cross-functional stakeholders to align technical integration solutions with business goals and corporate strategies.
- Enhanced system scalability and performance, swiftly diagnosing and resolving complex integration issues to ensure seamless operations.
- Kept abreast of advancements in the MuleSoft ecosystem, proactively recommending improvements and innovations to optimize system integrations.
- Developed and executed a unified API strategy, boosting operational agility and streamlining integrations with third-party services.
- Led advanced troubleshooting and system optimizations for MuleSoft deployments, ensuring high availability, fault tolerance, and optimal performance.
- Championed the adoption of cutting-edge integration patterns, mentoring a team of developers to drive innovation and elevate DNB's technical capabilities

Environment/ Applications Used:

MuleSoft Anypoint Platform, API-led connectivity, DataWeave, RAML, RESTful API design, SOAP services, Java, CloudHub, Anypoint Studio, CI/CD practices, Jenkins, Maven, Salesforce integration, Microservices architecture, Secure data transmission protocols.

Role: MuleSoft Developer**Client: Adtalem Global Education – Chicago****Duration: June 2020 – March 2022****Responsibilities:**

- Actively involved in all phases of SDLC (Analysis, Design, Implementation, Deployment) for the project.
- Implemented three-layer API led architecture and extensively worked on system and process layers of different APIs. Created MULE ESB artifact and configured the MULE configurations files and deployed.
- Created Mule Flow using End Point, Connector and Component bean using Mule ESB to communicate client/server systems.
- Created HTTP inbound & outbound flows, routing, orchestration, transformations for Mule Application.
- Developed Process flow diagrams for the different integrations based on the requirement.
- Developed different integrations which uses Database and integrated with different web services based on SOAP & REST using Mule ESB.
- Created Mule flows with different components like HTTP, VM, Transform Message, filters, routers and many others to achieve the required business logic.
- Strong knowledge and hands-on experience in documenting and designing REST APIs using RAML.
- Developed Mule ESB projects for services with synchronous and asynchronous Mule flows.
- Used Poll with watermarking for triggering the database to pull the updated data and start the application process to push it target system
- Created M-unit test cases for Mule flows to attain optimal code coverage.
- Built and deployed mule projects to Cloud Hub using Maven (Mule-Maven-plugin) through Jenkins
- Implemented Log4j for logging purposes. Used SOAP UI, POSTMAN & Jmeter for testing the application services.
- Implemented Error handling mechanisms based on the business requirements with Mule ESB
- Extensively used Dataweave to transform the messages.
- Experience in MuleSoft Anypoint API platform on designing and implementing Mule.

Environment/ Applications Used:

MuleSoft Run-time 4.2, Java/J2EE 1.8, Anypoint Studio, Cloud-hub, Nexus, Jenkins, Apache-Maven, SOAP Webservices, Git-hub, Postman, JIRA, SOA

Role: Lead Test Coordinator**Client: Canadian National Railways, Montreal****Duration: October 2018 to May 2020****Responsibilities:**

- Reviewed Business Requirement Documents and the Design Specification documents.
- Developed Test Strategy, Test plan and Test cases based on functional specifications and design documents.
- Prepared Traceability Matrix to ensure that all test cases are passed and met the given requirement specifications.
- Performed System, Integration, Black box and White box, Functional, and Regression testing of new/revised applications.
- Prepared Test data collected from the Network elements to create both positive and negative test scenarios.
- Extensively used SQL queries for Backend testing to verify the integrity of the database.
- Preparing the Test plan and test strategy preparation and task allocation.
- Organized testing process, Defect Triage meetings, RTM, test execution planning and generated reports
- Logged all the defects (applications and enhancements) in HP- ALM for the development team to fix the defects.
- Extensively used IAM2 tool to track the code coverage and tested the broker message flows.
- Attended the daily Defect review meetings, Test case/script review meetings, Company deliverable meetings and Weekly Project Status meetings.
- Responsible for updating and maintaining ALM for all the defects found during the functional and regression testing and providing matrix during the defect triage meetings for every cycle.

- Assisted senior data warehouse testers in developing standards and guidelines for data warehouse testing to meet business requirements.

Technical Environment: Linux, windows, Quick Test Professional, Automated/ Manual Testing, JavaJ2EE, SQL, VB Script, IBM-ESB, Soup UI

Role: QA/Tech Specialist I

Company Name: TEKsystems, Montreal, QC

Client: Mayo Clinic – Minnesota

Duration: June 2017 to Sep 2018

Project: Mayo Clinic is going through an organizational transformation triggered by marketplace reshaping. Mayo Clinic is a nonprofit worldwide leader in medical care, research and education for people from all walks of life.

Through this Project Engagement Mayo Clinic wants to Achieve Integration of DNA Sequencing, Interpretation of DNA Variants to Mayo clinic and Helix Customers by Creating the Knowledge base for their health insights by focusing on consumer engagement. This Project can help Mayo Clinic to enter into the New Area of providing the Services through Azure Cloud Platform.

Responsibilities:

- Participated in sprint planning, sprint review, daily scrum meetings and scrum of scrum meetings as part of agile process. Involved in developing test plans, test strategies, test scenarios, test scripts and test steps based on User stories.
- Developed Automation scripts for each User story (functionality) written in Descriptive Programming. Executing the test scripts using Protractor Tool
- Developed test scripts and function libraries using JavaScript. • Used automated scripts and Performed regression on Cross-Browser testing like Firefox, Internet Explorer, Chrome by automation for each sprint. Validated the RESTful services response header using post man and chrome developer tools.
- Performed Manual Testing and regression testing activities for new releases as an end-to-end testing on Different platforms like windows/Android and IOS on different web browsers.
- Performance testing on different Modules
- Coordinated Effort with Mayo Clinic IT Team on UAT Testing
- Worked closely with program developers and Sprint team to ensure that the application development met the user expectations.
- Knowledge transfer to the Client on automation scripts developed for each sprint to support the UAT.

Technical Environment: JavaScript, Angular 4, HTML5, XML, Salesforce CRM, Cucumber, Selenium, TestNG, Protractor, JavaScript, Git, Jenkins, Windows, Android, iOS, IIB, AGILE environment.

Role: QA Automation Engineer

Company Name: TEKsystems, Montreal

Client: T. Rowe Price – Baltimore

Duration: May 2016 to June 2017

Project: T. Rowe Price Managed Accounts is a Digital Investment web application developed for T. Rowe Price investors to manage their Investment Portfolios in a convenient way and to invest based on their timeline and risk tolerance. Managed Account application recommends a diversified model portfolio upon completing a short questionnaire which was designed and managed by T. Rowe Price Experts.

Responsibilities:

- Participated in sprint planning, sprint review, daily scrum meetings and scrum of scrum meetings as part of agile process.
- Involved in developing test plan, test strategies, test scenarios, test scripts and test steps based on User stories.
- Designed keyword driven frameworks in UFT using VBScripts to support Cross browser Testing (IE, Chrome, Firefox)
- Developed Automation scripts for each User story (functionality) written in Descriptive Programming. Executing the test scripts in UFT and ALM.
- Developed test scripts and function libraries using VBScripts. • Used automated scripts and Performed regression on Cross-Browser testing like Firefox, Internet Explorer, Chrome by automation for each sprint. Validated the RESTful

services response header using post man and chrome developer tools.

- Performed Manual Testing and regression testing activities for new releases as an end-to-end testing on Different platforms like windows/Android and IOS on different web browsers.
- Reduced a client's total number of UAT manual test case scenarios by 80% over a 2-month period, by creating automation scripts for model portfolio recommendation.
- Worked closely with program developers and Sprint team to ensure that the application development met the user expectations.
- Responsible for updating and maintaining ALM for all the defects found during the functional and regression testing and provide matrix during the defect triage meetings for every sprint.
- Knowledge transfer to the Client on automation scripts developed for each sprint to support the UAT.

Technical Environment: JavaScript, Angular 1.6, HTML5, XML, ETL, UFT 12.02, VBScript, SVN, HP- ALM, Excel, Windows, Android, iOS , AGILE environment.

Role: Technical Test Analyst

Client: Alberta Energy, Edmonton, AB

Duration: December 2015 to April 2016

Project: GOA Energy has an internal automation development team to cater the needs of QA organization. As part of this project, it involves the development of automation frameworks, scripts and testing of GOA Energy applications that help testing teams for Automation and reporting purposes.

Responsibilities:

- Writing of test scripts in C# ASP.Net using tools such as MS Visual Studio Coded UI, MTM.
- Work closely with Stakeholders for requirement analysis and Feasibility analysis and feature requests.
- Build Automation framework
- Collaborate with manual testers, QA Analysts - subject matter experts to gather requirements for Automation development.
- Create new test environments and configurations to meet test cases or problem recreation requirements.
- Work within a cross-functional team of developers to research, design, develop, and implement test Automation based on user stories and requirements for the team.
- Prepare estimates and testing schedules.
- Maintain and modify test environment and configuration as needed.
- User Story Writing and Analysis of the requirement.
- Creation and execution Automation test scripts.
- Execute automated, semi-automated, and manual unit test cases, covering system test cases and specifications from software developers.
- Interpret use cases, user interface specifications, and other functional requirements.
- Develop test plans and test cases.
- Write and maintain automated and manual test procedures.
- Clearly log defects, maintain test data, and monitor test performance over time.
- Reproduce issues, provide logs, and run applications through a debugger.

Technical Environment: Team foundation server (TFS), Autosys, Visual Studio Ultimate, Microsoft SQL server studio 2012, HTML, XML, C # Coded UI, MS Test.

Role: Quality Analyst

Company Name: Ceridian, Ottawa

Date: March 2015 to September 2015

Project: Ceridian is the leader in Human Capital Management technology, processing payroll. DayForce HCM addresses client's human capital management needs in a single, reliable, end-to-end, SaaS application. Worked on different modules of Day force HCM cloud-based application (SaaS).

Responsibilities:

Worked on different modules of Day force HCM cloud-based application.

- Involved In Requirements Gathering, Test Planning, Test Execution, Defect Filing, Bug Fix Verification
- Prepared test cases by analyzing User Stories using Test link.
- Closely working with business analysts & project management for tracking the change sets in user stories.
- Attended daily standup meetings followed agile environment
- Involved in weekly walkthroughs and inspection meetings, to verify the status of the testing effort and the project as a whole and leading offshore team.
- Used Test Link as Test Repository for Requirements, Test plans.
- Perform smoke testing for acceptance criteria for each user story, Functional, Integration, Usability, Regression, Ad-hoc testing as a part of sprint work.
- Perform End to End testing and System Testing, cross browser testing in Firefox/Chrome/IE
- Identify software defects and work closely with developers to resolve them
- Track defects in sprinter and Modifying Test cases when developers change the code, reviewing test cases prepared by team members.
- Tested all custom reports and system reports to run and validated the report generation
- Involved in Automation scope for the project and identified the modules that can be automated and worked with cross functional team using selenium with c#.

Technical Environment: Team foundation server (TFS), Test link, Visual Studio, Microsoft SQL server studio 2012, Web driver, AGILE environment

Role: Quality Analyst

Company Name: ADP, Ottawa

Date: March 2014 - March 2015

Project: ADP is one of the world's largest providers of business outsourcing and human capital management solutions, it offers a wide range of human resource, payroll, talent management, tax and benefits administration solutions from a single source. The Project Vantage Mobile and iPad Application involved testing Payroll, Compliance, Benefit and Manager Reports on iPad and Mobile devices.

Responsibilities:

- As a Scrum team member, participated in release & sprint planning, estimation & demos, retrospectives & the daily standups.
- Created and documented User Stories and tasks in Version One of Agile environment for testing.
- Designed, developed and executed test processes, test plans and test scripts.
- Analyzed problems and performed investigative tests for root cause analysis.
- Worked closely collaborating and communicating effectively with project stakeholders, engineers and managers.
- Communicated status, risks to story completion and offer mitigation strategies to ensure on-time delivery of all committed projects.
- Expertise in test plan & test case creation, execution and estimating associated work efforts.
- Played an efficient role in estimating and communicating daily status to the team.
- Involved in tasking out the stories at the beginning of each sprint to a level of accuracy that allows the team to make firm commitments.
- Performed Smoke, Functional, and Regression testing on the application.
- Involved in running the Integration and Boundary tests.
- Created test data to test both positive and negative test scenarios.
- Involved in both GUI testing.
- Performed database testing, to verify the UI results with that in the database.
- Worked closely with program developers and Sprint team to ensure that the application development meet the user expectations.
- Performed Web services testing using SOAP UI to verify the API flow for mobile and tablet testing.
- Documented and Tracked the Test plans, Test Cases and Defects in ALM and coordinated with developers on the status of the bugs on a daily basis.
- Prepared Daily status reports and sent to team.

Technical Environment: Windows, iOS, Xcode Android, SaaS application, Java Framework, JavaScript, object C, AGILE environment, Version One, HP Application Life cycle Management (ALM-11.00), IBM Rational Clear Quest, Microsoft SQL server, SOAP UI.

Role: Quality Analyst

Client: HDFC Bank

Duration: May2012 to December2012

Project: HDFC Credit card services. Designed Client-Server, GUI application for online credit services for customers. This is used by associates in call centers to capture card applications for different lines of businesses.

Responsibilities:

- Actively involved in QA process activities, like Creation of test plan, Creation of test case, Creation of Test Matrix, Test Case execution, Reporting the bugs, bug tracking, system defects, retesting the bugs etc.
- Worked on online credit banking for credit card summary, transactions, e-statements, POS transactions through online shopping.
- Developed Test Cases based on the Use Case Documents, Business Requirements, and Functional Specifications
- Validated field level, screen level and application level with business rules for hard stop, soft stop, boundary values for credit application approval or declines
- Performed automation testing using QTP utilizing the record and playback features for data
- Enhanced the recorded script using synchronization, check points, parameterization, and reusable actions
- Quick Test professional was used to automate the Regression Testing after every version change of the application.
- Participated in Test Case walkthroughs, inspection meetings
- Conducted system integration testing, end to end testing and system testing for end-to-end business process validation.
- Analyzed the results, tracked the defects and generated reports using Quality Center
- Performed Regression test to ensure product integrity after modification and enhancements
- Executed queries in test databases using SQL queries.

Technical Environment: Windows XP, GNU/Linux, Mac OS X, TSO, CICS, Java, JSP, EJB, Oracle, JDBC, HTML, XML, Web Services, ETL, SOA, IBM Message Broker, Quality Center 10, QTP 10

Education

Bachelor of Technology, Electrical and Communication Engineering
Jawaharlal Nehru Technological University, Hyderabad, India

Aug 2008 to Apr 2012

Master of Engineering, Quality Systems Engineering
Concordia University, Montreal, Canada

Jan 2013 to March 2014
