

Tech-savvy professional with extensive experience in developing, optimizing, and enhancing software systems across diverse platforms, including Java, Ruby, and Salesforce environments. Proven success in leading integration and standardization of complex systems within compliance-driven frameworks, enhancing data privacy, system scalability, and operational efficiency. Demonstrated leadership in mentoring teams, fostering a culture of technical excellence, and driving continuous improvement through innovative solutions. Skilled in deploying cutting-edge technologies such as Spring Boot, Apache Kafka, and Microsoft Azure to deliver business-aligned technical solutions. Adept at leveraging strategic architectural enhancements and robust testing methodologies to ensure superior system performance and reliability. Recognized for excellent problem-solving abilities and commitment to achieving high standards in customer service and system integration. Demonstrated leadership in mentoring and onboarding engineers, fostering a culture of technical excellence and collaboration.

Areas of Expertise

- ◆ Software Development Lifecycle
- ◆ System Architecture & Integration
- ◆ Data Privacy & Security Compliance
- ◆ Agile & Scrum Methodologies
- ◆ Microservices & API Design
- ◆ Cloud Computing Solutions
- ◆ Performance Optimization & Scalability
- ◆ Continuous Integration & Deployment
- ◆ Cross-functional Team Collaboration

Technical Skills

Languages: Recent Proficiency: Java, Spring Boot, Apex/Salesforce, UML, JSON, XML, NoSQL, SQL. | **Working Knowledge:** Ruby, Perl, Python, JavaScript, Groovy, CSS, HTML | **Past Proficiency:** C, C++, C#, Lua, VB.Net, VBScript, ASP.Net, ASP 3.0, Lisp, Prolog, MS Macro Assembler, TCL/TK, Lex / Yacc.

Platforms: Unix/Linux, Macintosh, Windows Server.

Frameworks & Libraries: Spring Framework, Spring Cloud Streaming, Vue.js, Apache Kafka, Apache Avro, Confluent Schema Registry, Node.js, Apache Camel, ORM/Hibernate, AWS Lambda/S3/RDS, Google Cloud Platform (GCP), Redis, Postgres, MongoDB, Akamai CDN, Docker, JUnit, MS Azure, MS Graph API, MyBatis, Jenkins, .Net Framework, Eclipse RCP/plugins, Apache Ivy, Apache Jelly, Stapler, Apache POI, JMS, AJAX, AspectJ, JSP/Servlets, Struts, Swing, SWT, MS Office Automation Development.

Tools: Grafana, Dynatrace, Splunk, IntelliJ, Eclipse, GIT, Apache Maven, Postman, Sonatype Nexus, Jira, Node.js/nvm, Illuminated Cloud, Perforce, Subversion, ANT, TestNG, Sparx Enterprise Architect, YourKit Profiler, Apache Tomcat, Undertow, Hudson build server, Visual Studio.Net, JBuilder, Macromedia Dreamweaver, Rational Rose, MS Visio, MS IIS, SQL Server, NUnitAsp, Visual SourceSafe, CVS, Visual C++ 6.0, Code Warrior.

Methods: Kanban, Scrum, Pair Programming, Test-driven development, Peer review

Technologies/Proficiencies: CI/CD, DevOps, Kubernetes (AWS EKS, via Alpine platform abstraction), REST APIs, AuthN/AuthZ, SSO/SAML, OAuth2, LDAP, RBAC, IAM policies, Gitlab, Github | **Payments:** Payment Processing Systems, Transaction Security, Credit Card Authorizations, Settlements and Returns, Payment Error Reduction, Fraud Protection Integration, Continuous Integration for Payment Services, Monitoring and Alerting for Payment Systems.

Career Experience

Recreational Equipment, Inc., Kent, WA

2013 – 2024

Senior Software Engineer – Consent and Privacy Team (2022 – 2024)

Spearheaded integration of messaging systems using IBM MQ and Apache Kafka to streamline data flows and ensure compliance with regulatory standards. Led efforts to standardize error handling and web services across multiple applications, optimizing the development process and reducing redundancy. Regularly reviewed and optimized existing codebases to improve performance and scalability, contributing to overall security and efficiency of REI's software systems.

Key Achievements/Contributions:

- **Developed Spring Boot applications** focused on enhancing customer data privacy and consent management.
- **Enhanced architectural cohesion and futureproofed systems** by driving the adoption of **Apache Kafka** for CRO Adapters.
- **Created reusable CRO Adapter** for customer erasure requests, reducing onboarding time for teams by **40-60%** and saving **4-6 weeks** of ramp-up time per developer. Simplified integration through a single Maven dependency and Java interface implementation.
- **Standardized error handling** across multiple applications, reducing recurring errors by **20-30%** and lowering code maintenance efforts by **15-25%**. Resulted in fewer incidents and faster deployments.

- **Drove adoption of Apache Kafka** for CRO Adapters, improving system scalability and saving an estimated **3-4 weeks** of future rework by eliminating the need to re-architect applications for message queuing. Enhanced system resilience and futureproofing for larger data volumes.
- **Configured monitoring tools (Splunk, Dynatrace, New Relic)** to track application performance and detect anomalies, reducing incident response time by **40%**.
- **Developed and maintained dashboards using Kibana** to monitor real-time data flow compliance, improving scalability and resilience.
- **Mentored and onboarded junior engineers**, improving team productivity by **20%** and fostering a culture of collaboration.
- **Led code reviews**, ensuring adherence to best practices and reducing production defects by **30%**.

Lead Software Engineer – Customer and Local Services Team (2019 – 2022)

Led development and maintenance of microservices for retail and customer service applications at REI. Enhanced functionality and integration of customer-facing services, including appointment scheduling and local event management. Utilized range of technologies such as Spring Boot, Microsoft Azure, and various APIs to build scalable and secure applications. Collaborated with architects and product managers to align technical solutions with business goals.

Key Achievements/Contributions:

- **Built responsive front-end components using Vue.js**, improving user experience and reducing page load times by **25%**.
- **Directed PostgreSQL database migration for retail microservices; received high praise for planning and execution despite resource limitations.** Developed migration scripts that ensured **100% data integrity**, including exact replication of SQL Server tables, sequences, and indexes. Reduced potential Sev1 incident risk by **50%** through meticulous planning and testing, resulting in **zero issues** during extensive prototype testing. Created comprehensive documentation and rollback procedures, reducing future migration planning efforts by **25%**. Led cross-team collaboration efforts, demonstrating leadership by aligning SRE and engineering teams for a successful deployment plan.
- **Spearheaded Redis distributed L2 caching innovations**, solving a pivotal defect and earning acclaim for technical proficiency and solution-oriented approach. Reduced future **production incidents by 50%**, saved teams **1-2 weeks** of troubleshooting per project, and improved cache retrieval times by **15-20%**.
- **Integrated Microsoft Graph API** with REI's Virtual Outfitter microservices within **three weeks**, delivering the integration **30-40% faster** than industry standards. Enabled remote appointment scheduling during COVID-19, improving customer satisfaction and likely saving **2-4 weeks** for future development teams with reusable microservices. Achieved **zero production issues over 3+ years**, preventing **5-10 hours/month** of support time.
- **Advanced REI's data processing reliability by integrating Apache Kafka** with retail and queue management systems, resulting in a **50% reduction in duplicate transactions** and enabling **near-real-time processing** for large data transfers. **Replaced IBM MQ, increasing data throughput by 30%** and preventing potential production incidents related to message duplication. **Led Kafka training sessions** and provided documentation to ramp up the team, reducing onboarding time for engineers by **40%**.
- **Implemented Grafana dashboards to monitor Kafka event streams**, improving data visualization and reducing debugging time by **30%**.
- **Configured and analyzed Dynatrace dashboards** to proactively detect performance bottlenecks, reducing downtime by **30%** and improving application reliability.
- **Unified retail microservices architecture documentation** that improves stakeholder understanding and communication and fosters a knowledge-sharing environment, benefiting **21 teams** across REI. Conducted a detailed analysis of **3 months** of log data to identify service usage, escalation paths, and impact severities (SEV-1 to SEV-4) for each team. Created comprehensive UML diagrams, IBM MQ data flows, and cross-functional flowcharts, reducing incident response time by **40%** and decreasing onboarding time for new engineers by **25%**. Documentation remained the central reference for **5+ years**, requiring no further clarifications.
- **Resolved critical customer appointment syncing issues between Salesforce and ESB applications in mere days**, reducing potential development time by **3-4 weeks** and preventing unnecessary implementation of web services. Identified the root cause within **2 days**, improving the reliability of the customer appointment system and enhancing customer satisfaction. Prevented potential production issues by implementing a character limit validation, eliminating appointment setup failures and ensuring a seamless experience for thousands of customers.
- **Overcame significant pushback** to identify and rectify a major caching issue with **Akamai**, enhancing site reliability and earning commendation for thorough investigative work, leading to a **50% reduction in incorrect 301 redirects served**, improving **page load times by 10%**, and **reducing customer-reported issues by 25%**.
- **Implemented QR code functionalities for a seamless curbside pickup experience during the pandemic, recognized for critical contributions to customer service operations.** Enabled **thousands of contactless pickups**, increasing customer safety and satisfaction. Developed and stored QR codes in **AWS S3**, improving scalability and retrieval speed, with the system processing **hundreds of QR codes daily**. Reduced manual effort for

the merchandising team by providing an intuitive web interface for managing QR codes, which improved operational efficiency by **30%**.

- **Developed Google Cloud Monitoring dashboard** in response to a severe DDoS threat to boost security posture of REI's services, resulting in a **40% reduction in response time to incidents**, preventing **over \$10 million** in potential API overage fees, and improving detection of malicious activity by **75%** with real-time Slack alerts and geographical traffic monitoring.
- **Steered high engineering standards and continuous improvement to enhance code quality and team collaboration**, resulting in a **30% reduction** in code review cycle time and increasing team collaboration through cross-project knowledge sharing initiatives. Authored and implemented a code review guidelines document that decreased pull request blocking by **40%** and fostered a more efficient, trust-based review process. Enhanced team productivity by promoting a knowledge-sharing culture, reducing dependency on key individuals and improving response times for on-call incidents by **25%**.

Lead Software Engineer – Mobile Restocking Assistant Pilot project (2016 – 2019)

Oversaw the pilot development of mobile applications to optimize inventory restocking processes at REI. Created user-friendly interfaces and robust backend systems using Spring MVC, IBM MQ, and Vue.js. Conducted extensive testing and refinement to ensure functionality and performance across mobile platforms. Collaborated closely with the logistics and supply chain teams to align application features with operational needs and user feedback.

Key Achievements/Contributions:

- **Enhanced mobile restocking efficiency** by implementing core functionalities, contributing to the pilot project's success and **improving restocking accuracy by 25%**.
- **Resolved AWS S3 Bucket timeout issues** to enhance system reliability, reducing downtime by **30%**, and receive accolades for technical troubleshooting skills.
- **Elevated team performance** by mentoring an engineer on algorithm optimization, improving the application's performance and reducing execution time from **indefinite hang times to near-instant completion**, resulting in a **90% reduction in load times** for the affected feature.
- **Supported deployment** of the restocking app across **170+ REI stores nationwide**, improving real-time inventory tracking and **reducing stockouts by 20%**, which helped save the company significant money by reducing over-ordering and missed sales opportunities.
- **Fixed defects** and optimized mobile web performance on iPhone, improving load times by **25%** and enhancing user experience for store managers across all U.S. locations.

Lead Software Engineer - Shop Services Team (2017 – 2019)

Led Salesforce-based applications for shop services, focusing on user authentication and data integration. Implemented secure and efficient solutions using SAML SSO and JIT provisioning, and developed custom scripts for data manipulation and system integration. Actively participated in architectural design sessions and provided expert guidance on Salesforce platform capabilities and best practices.

Key Achievements/Contributions:

- **Steered architectural enhancements and Apex programming adoption** for Salesforce aligned with strategic business objectives, resulting in a **25% improvement in code performance**.
- **Ensured flawless SSO and JIT user provisioning integration within REI's Shop Services Salesforce application**, incorporating **role-based access control (RBAC)** and complex **SAML authentication** to manage employee permissions and roles across the organization, which resulted in reducing manual account setup by **98%** and decreasing provisioning errors by **85%**.
- Developed detailed **identity access management policies** to ensure secure and seamless login experiences for users based on their job titles and responsibilities, **automating permissions management** and reducing manual intervention by **90%**, saving approximately **400+ man-hours annually**.
- **Automated employee account audits**, eliminating manual audits and ensuring updates were processed within **50 minutes** of receiving new data from Ultipro, reducing the need for manual adjustments of terminated or promoted employees' permissions and saving approximately **500+ man-hours annually**.
- **Developed PowerShell scripts** for efficient data import from the Ultipro employee feed, **enhancing data processing efficiency by 55%** and reducing data import time from **1.5 hours to 40 minutes**.
- **Addressed and resolved complex defects in the Kronos scheduling feed**, improving system reliability by **50%** and reducing downtime incidents by **70%**.
- **Created over 900 unit tests**, achieving **98% code coverage** and ensuring **zero production issues** within the first year of deployment.
- **Mentored 3 junior engineers**, boosting their productivity by **35%** and increasing team output by **25%**.

Lead Software Engineer – Payments Team (2013 – 2017)

Designed and implemented the foundational Java REST web services and components of REI's payment system from its beginnings, serving as the **primary engineer** responsible for critical payments functionality that processed **100% of REI's transactions**, supporting over **150 retail stores** and millions of online customers. Tackled the most complex, high-priority engineering challenges assigned by team leadership, building key components such as credit-card authorizations, settlements, returns, and dividend web services, resulting in a **30% reduction in payment processing errors**. Integrated Chase Paymentech, Accertify Fraud protection, Sterling fulfillment / order management system, and REI's checkout system, ensuring a robust and scalable payments architecture capable of handling over **10 million transactions annually**.

Key Achievements/Contributions:

- **Maintained consistent collaboration with various teams** to align payment processing solutions with business needs and regulatory requirements, resulting in a **15% improvement in compliance adherence** and **streamlining cross-department workflows**.
- **Mentored team members on Java RESTEasy best practices**, improving code quality and team skill levels, which led to a **25% reduction in code review iterations** and accelerated development timelines.
- **Developed Java REST web services for payment processing**, integrating key systems and enhancing transaction security and efficiency, improving transaction processing speed by **25%**.
- **Centralized payment processing logic into a microservices architecture**, reducing code duplication by **60%** and lowering maintenance costs.
- **Mentored and trained a fully remote engineer transitioning from legacy systems to modern Java development**, resulting in a **50% increase in his code contributions** and enhancing team productivity.
- **Solved critical defects that others could not resolve**, reducing issue resolution time by **70%** and improving system uptime.
- Implemented Ruby and Bash scripting solutions that enhanced continuous integration participation for the payments team, enhancing development processes and system reliability, reducing deployment times by **50%** and increasing release frequency by **30%**.
- **Led scrum meetings and managed sprints for over three years**, improving team coordination and reducing project delivery timelines by **20%**.
- **Created comprehensive Splunk queries and alerting mechanisms for payments logs**, enhancing monitoring capabilities and reducing mean time to detect and resolve issues by **40%**.
- **Collaborated cross-functionally with platform teams**, enabling the payments team to integrate with REI's continuous integration systems, which saved significant time and resources.
- **Assisted Infosys on-call support in troubleshooting complex issues**, improving support response times and system reliability.

Amazon.com Inc., Seattle, WA Support Engineer III, Supply Chain

2011 – 2013

Supported Amazon's supply chain applications, focusing on inventory and fulfillment planning. Developed and implemented Java and Ruby applications to optimize workflow processes and data integrity. Conducted rigorous testing and troubleshooting to maintain system performance and reliability. Collaborated with cross-functional teams to address large-scale operational challenges and improve system integrations.

Key Achievements/Contributions:

- Prevented purchase order errors by implementing a vendor code validation process in the Inventory Planning workflow.
- Improved anomaly detection in large-scale ordering by developing a Java application to monitor deviations from established trends.
- Created a Ruby application that automated troubleshooting in the Fulfillment Planning team's workflow, improving process efficiency.
- Refactored Java services for large cost analysis file handling, streamlining workflow steps, and reducing system strain.
- Provided essential on-call support for high-severity issues, resolving critical disruptions and safeguarding Amazon's operational continuity.

21st Century Systems Inc., Honolulu, HI Principal Software Engineer (Software Engineer IV)

2005 – 2010

Led the design, development, and implementation of mission-critical software solutions for Navy battlefield mission simulation and planning. Developed advanced tactical decision aid applications and established effective configuration management practices. Appointed Project Configuration Manager, overseeing CMMI activities and spearheading technological innovations to enhance company product lines.

Key Achievements/Contributions:

- Researched, designed, and implemented the CUSAS Simulator, a Java network distributed application using JMS, for Navy battlefield mission simulation and planning.
- Developed the Force Disposition Manager, a Navy Tactical Decision Aid application, utilizing Java Eclipse RCP, featuring graphical map displays, event and timeline visualization, and plan comparison capabilities.
- Implemented a code churn Hudson plugin using AJAX, jQuery, Java, Apache Jelly, and JavaScript to provide source code metric indicators of development effort and software health.
- Established and enforced standard configuration management practices, including coding conventions, nightly builds, integration tests, Checkstyle, and unit testing thresholds, enhancing software stability and team collaboration.
- Appointed Project Configuration Manager (2007 – 2010), leading Capability Maturity Model Integration (CMMI) activities within the office.
- Spearheaded the implementation of Eclipse RCP headless builds for automated integration and smokescreen testing, improving development efficiency.
- Authored comprehensive software architecture documentation using Microsoft Visio and UML, ensuring alignment with industry best practices.
- Promoted new technologies such as cloud computing to enhance company product lines and collaborated on resolving Jira bug reports.

Additional Experience

Software Development Engineer II (Contractor), Target Website, Payments, Amazon.com Inc., Seattle, WA

.Net Programmer / Web Developer (Graduate Assistant), Center for Disability Studies, University of Hawaii

.Net Programmer / Web Developer, eHana L.L.C., Honolulu, HI

ASP Programmer / Web Developer (Research Assistant), Software Engineering Research Laboratory, University of Hawaii

Certifications

Relational Database Modeling — Design Gurus, January 2025

System Design Principles and Practices — Design Gurus, January 2025

Education

Master of Science in Information and Computer Science, University of Hawaii at Manoa, Honolulu, HI
