Phone: (660)5411798
Full Stack Java Developer

PROFESSIONAL SUMMARY:

- Having **7+ years** of experience in all phases of the **Software Development Life Cycle (SDLC)**, which includes **User Interaction, Business Analysis, Design, Development, Implementation, Integration, Documentation, Testing, Enterprise, and Web-based applications** using **Java, J2EE technologies**
- Strong application development experience in using the latest **Agile Software Development methodologies** like **Scrum, Sprint**, and traditional software models like **Waterfall and TDD**
- Expertise in developing web pages using **HTML, CSS, JavaScript, jQuery, Ajax, AngularJS/2, and ReactJS Bootstrap** with **webpage browser compatibility** and scripting languages like **Node.js, BackboneJS, and ReactJS**
- Experience in **ReactJS components**, including **Forms, Events, Keys, Router**, plus **Redux and Flux** concepts
- Experience with **Java 1.8+ features**, such as **Parallel Streams, Lambda Expressions, Stream API, and Date Time API**, to enhance **application performance**
- Hands-on experience in developing **Microservices Architecture and Service-Oriented Architecture (SOA)**.
- Experience with **Apache Kafka and JMS**, supporting **both Synchronous and Asynchronous messaging**
- Hands-on experience in the creation, configuration, and management of **Apache Kafka and RabbitMQ** series objects like **Queue Managers**
- Experienced in Git-based version control systems, including **GitHub, Git, and Bitbucket**
- Expertise in using various log monitoring tools such as **Splunk**, ensuring **efficient application monitoring and debugging**
- Experience with **SQL and PL/SQL**, working with relational databases like **Oracle, MS SQL, MySQL, PostgreSQL**, as well as **NoSQL databases** such as **MongoDB, DynamoDB, and Cassandra**
- **Proficient in API Development and Integration**, designing **secure and scalable RESTful and GraphQL APIs** using **Spring Boot and Node.js**
- Expertise in Performance Optimization and Scalability Strategies, implementing **caching mechanisms, load balancing, and database indexing** to enhance **system efficiency**
- Strong proficiency in Containerization and Orchestration, utilizing **Docker and Kubernetes** for **deployment, scalability, and microservices management**
- Designed and implemented **CI/CD pipelines** using **Jenkins**, enabling **fast, reliable application development, testing, and deployment**
- Hands-on experience with Cloud Technologies, particularly **Amazon Web Services (AWS)**, including **Lambda, S3, and EC2** for **cloud-based deployments and infrastructure management**
- Experience with different IDEs, including **Eclipse, Spring Tool Suite (STS), and IntelliJ**, ensuring **efficient software development and debugging**
- Hands-on experience in build automation tools, such as **ANT, Maven, and Gradle**, along with **ticketing tools like Jira**
- Proficiency in **UNIX/Linux environments**, including **command-line operations and application deployment in server-based infrastructures**

TECHNICAL SKILLS:

Languages	Java, J2EE, SQL, PL/SQL, Python, R
Tools & Framework	Struts, Hibernate, Spring MVC, Spring IOC, Spring AOP, JMS, JPA, Log4J, SOA, Micro services, Apache Kafka, SOAP UI, Spring Boot, Spring cloud, Spring Batch, Spring Security and Spring Data.
Web services	SOAP, RESTful, UDDI, WSDL, JAX-RPC, JAX-RS JAX-WS, JAX-B, Apache Axis2, Apache CFX, JMS
Web/App Servers	Web Sphere, WebLogic, Web Services, JBoss, Apache, Tomcat
Web Technologies	HTML, CSS, JSON, XML, jQuery, Bootstrap, React JS, Angular Js
Database	Oracle, PostgreSQL, MySQL and NoSQL databases like MongoDB, Cassandra.
Development Tools	Eclipse, Spring Tool Suite (STS), IntelliJ

Testing Tools/ Others	JUnit, SoapUI, Postman, Putty, RTC, Load UI, JIRA, selenium, Splunk
Version Control	GIT, GitHub, Bitbucket
Cloud Technologies	Amazon Web Services (AWS)

EDUCATION:

Master of Science in Applied Computer Science

- Northwest Missouri State University - Maryville, MO

Bachelor of Technology in Electronics And Communication Engineering

- Sathyabama University - Chennai, India

CERTIFICATIONS

Amazon Web Services Cloud Practitioner Certified

Amazon Web Services Associate Developer Certified

PROFESSIONAL EXPERIENCE:

Client: US Bank, Hopkins, MN

Oct 2023- Present

Role: Full Stack Java Developer

Responsibilities:

- Spearheaded the development of **React-based software solutions** for **US Bank's Wealth Management Team**, ensuring high-quality user experiences and robust functionality
- Leveraged expertise in **React JS** to develop, test, and maintain cutting-edge web applications, adhering to industry best practices and standards
- Developed Java applications to securely connect and transfer files using SFTP (Secure File Transfer Protocol) to remote servers.
- Designed and implemented RESTful APIs** using **Node.js** and **Express framework**, ensuring seamless integration with front-end applications and efficient data flow
- Integrated with databases such as **MongoDB or PostgreSQL**, optimizing queries and data retrieval processes to enhance overall application performance
- Contributed to **the Agile Methodologies** participating in sprint planning, daily stand-ups, and retrospectives to drive iterative product enhancements
- Implemented responsive design principles and optimized performance to deliver seamless user experiences across various devices and screen sizes
- Implemented FTP client functionality using Apache Commons Net in Java for file transfer and remote server interaction.
- Conducted **code reviews and provided constructive feedback** to teammates, promoting code quality, consistency, and adherence to coding standards
- Developed and maintained **GraphQL APIs** to enhance data fetching efficiency, reducing over-fetching and under-fetching issues in React applications
- Implemented API gateway and authentication mechanisms using **JWT and OAuth 2.0**, ensuring secure communication between frontend and backend services
- Developed **Java-based automation scripts** to interact with NDM, enabling scheduled **data transfers between mainframes and distributed environments**
- Integrated Java applications with **Kibana** to **visualize and analyze logs and metrics** generated by the application in real time
- Optimized API performance by implementing caching strategies using **Redis and fine-tuning database queries** for faster response times in high-traffic applications
- Integrated APIs** for real-time data processing, payment gateway functionalities, and external service interactions, improving overall application capabilities

- Leveraged **useState, useEffect, useContext, and custom hooks** to manage component state, side effects, and context within functional components, improving code readability and maintainability
- **Created custom hooks to encapsulate reusable logic** (e.g., fetching data from APIs, handling form state) across components, promoting code reuse and abstraction
- Implemented **server-side rendering (SSR)** or **static site generation (SSG)** with frameworks like **Next JS** to **improve search engine discoverability** and performance of **React-based applications**
- Utilized **React. lazy and Suspense** to optimize application performance by dynamically loading components and splitting bundles, reducing initial load times
- Developed custom **FTP commands** (e.g., upload, download, list) to automate file management tasks over FTP servers
- Led the development and maintenance of **scalable web applications**, collaborating closely with cross-functional teams
- Designed and implemented front-end features using **React**, ensuring responsiveness and optimal user experience
- Developed back-end services with **Java Spring** and **Play Framework**, handling business logic and integration with various services
- Wrote efficient, **optimized SQL queries** and database functions for **PostgreSQL** to manage large datasets and complex relationships
- Developed and maintained **RESTful APIs** for smooth interaction between front-end and back-end systems
- Provided application support and performed debugging, testing, and troubleshooting to ensure reliability
- **Configured NDM sessions in Java, ensuring smooth file movement and integrity checks during data transmission**
- Managed **Windows and Linux environments**, including **configuring IIS, server maintenance, and automating deployment processes**

Client: Blue Cross Blue Shield of Michigan, MI

Feb 2023- Sep 2023

Role: Full Stack Java Developer

Responsibilities:

- Actively involved in all phases of the Software Development Life Cycle (SDLC) using Agile methodology, with strong expertise in Spring Boot and Microservices architecture tailored for healthcare applications.
- Designed and implemented use case diagrams, class diagrams, and sequence diagrams to support requirements specific to health data processing and application workflows.
- Utilized Microservices architecture with Spring Boot to build scalable and modular services, using Postman to validate API calls for critical health service endpoints; deployed applications on Apache Tomcat server.
- Developed Java-based modules to make RESTful Web Service calls to backend Microservices responsible for processing Electronic Health Records (EHR).
- Leveraged Java 1.8 features such as Lambda expressions and Stream API to optimize performance for bulk operations on patient and clinical data collections.
- Created and executed complex SQL queries to extract and de-identify sensitive health data, supporting HIPAA-compliant database operations and analytics workflows.
- Built single-page applications (SPA) using ReactJS and Bootstrap to present dynamic medical data to users, ensuring responsive design and accessibility.
- Implemented secure SFTP-based file upload/download functionality in Java to handle sensitive health records with encryption and error handling.
- Designed and developed responsive interfaces with Angular 8 and 13, ensuring optimal experience across various medical devices and screen resolutions.
- Integrated RESTful APIs with Angular applications to enable real-time communication between healthcare front-end modules and back-end services.
- Developed both reactive and template-driven forms in Angular to manage input validation for patient registration, appointment scheduling, and clinical data entry.
- Applied Angular Material components to maintain a consistent user interface aligned with healthcare compliance standards and user ergonomics.
- Used lazy loading and code splitting techniques in Angular to enhance performance and reduce load times, especially important for time-sensitive clinical workflows.
- Utilized RxJS observables for real-time data streams such as lab result updates and health monitoring feeds, ensuring responsive UI updates.
- Configured Java-based FTP/SFTP clients to securely connect to remote systems using SSH keys, supporting healthcare data integrations across systems.
- Integrated authentication and authorization mechanisms with Angular Router Guards and JWT tokens to enforce role-based access control, ensuring only authorized personnel can access PHI (Protected Health Information).

- Developed custom logging configurations in Java to stream log data to Elasticsearch, enabling advanced diagnostics and system health monitoring via Kibana dashboards.
- Integrated NDM (Network Data Mover) with Java applications for reliable and secure large-scale file transfers between healthcare facilities and data centers.
- Applied modern ES6 JavaScript features (e.g., let, const, arrow functions) for enhanced code readability and maintainability in healthcare apps.
- Used Log4j for effective logging and monitoring, helping trace issues in patient data processing pipelines and audit trails.
- Participated in legacy application migration to modern platforms, ensuring continuity of health services while resolving compatibility issues.
- Deployed applications using Jenkins CI/CD pipelines, ensuring efficient rollout of new healthcare features and compliance patches.
- Used Git for version control with proficiency in Git Bash for managing healthcare development environments.
- Provided on-call production support and contributed to application maintenance during critical health system releases and updates.
- Collaborated closely with UI/UX designers, QA engineers, and product owners during Agile ceremonies to ensure alignment with clinical and user requirements.
- Configured secure SFTP connections in Java with password and SSH key-based authentication, safeguarding patient data transfers.
- Contributed to the development of both traditional and hybrid healthcare web applications with an emphasis on usability and regulatory compliance.
- Built frontend components using Vue.js and jQuery to support high-performance dashboards and health analytics interfaces.
- Used Spring framework in the backend with PostgreSQL to manage patient data, appointment scheduling, and clinical records.
- Worked on continuous integration and deployment using Git, Docker, and Jenkins, ensuring fast and reliable delivery of healthcare software updates.
- Participated in code reviews and collaborative development sessions to maintain a clean, maintainable codebase aligned with industry best practices.

Client: Northwest Missouri State University, Maryville, Mo

April 2022 -Dec 2022

Role: Graduate Teaching Assistant

Responsibilities:

- Lead **Object-Oriented Systems (JAVA)** and **Web Applications** courses with a capacity of 100 students as a Teaching Assistant
- Assisting professor in teaching courses by developing course material for **Java programming class**
- Interacted with students in class, lab, and online to answer their questions, grading assignments, and exams
- Developed **model projects** for students to improve their understanding of Java and system design concepts
- Implemented front-end functionality using **HTML5, CSS, and JavaScript** to enhance user interfaces
- Graded assignments, exams and created **80 tests** with keys

Client: Coforge, Hyderabad, India

Feb 2018 – Dec 2021

Role: Java Developer

Responsibilities:

- Involved in Daily Scrum (**Agile**) meetings, Sprint planning and estimation of the tasks for the user stories, participated in retrospective and presenting Demo at end of the sprint
- Developed Single page application and structured the JavaScript code using **AngularJS** and Created responsive web pages using **Bootstrap**
- Developed user-friendly interface to seamlessly combine the new module with existing login system by using **AngularJS**
- Implemented **MVC** architecture using **JSP, Spring, Hibernate** and used **Spring Framework** to initialize managed beans and services
- Worked on front end application with **React** and used **state** object **React Class Component** for general stateful management
- Involved in development of Agent Verification System using **Spring MVC** framework
- Used **Spring Inheritance** to develop beans from already developed parent beans
- Used **Spring Security** for **Authentication and Authorization** of the application
- Implemented **Microservices** based on spring boot architecture running on **Tomcat** Application Server
- Created **data model** and generated **Hibernate mappings** and **domain objects** using Hibernate tools
- Interfaced with the **Oracle** back-end database by integrating **Spring** with **Hibernate**
- Extensively used **Hibernate** named queries, criteria queries, Hibernate Query Language (**HQL**) and Optimistic Locking and Caching to process the data from the database

- Developed Unit /Integration test cases using **Junit**
- Used **Gradle** tool for building and deploying the Web applications in **Web Logic Server**
- Used **JIRA** tool for tracking stories progress and follow agile methodology
- Used logging techniques provided by **Log4J** tool for efficient logging and debugging
- Developed the application using **IntelliJ** as the **IDE** and used its features for editing, debugging, compiling, formatting, build automation and **version control (SVN)**
- Designed and developed REST APIs using frameworks like **Spring Boot or Jersey**, adhering to **REST principles** for resource representation and state management
- Automated build, test, and deployment processes using tools such as **Jenkins**, **Maven/Gradle**, and **Docker/Kubernetes** for **CI/CD pipelines**
- Managed transaction boundaries using **Spring's declarative transaction management**

Client: Future Point Technologies, Hyderabad, India

April 2017 – Dec 2017

Role: Java Developer

Responsibilities:

- Developed the application using **Struts Framework**, leveraging classical **Model View Controller (MVC) architecture**
- Designed user interfaces using **JSPs**, developed **custom tags**, and utilized **JSTL Taglib** for dynamic content rendering
- Developed various **Java business classes** to handle different application functions efficiently
- Developed controller classes using **Struts and Tiles API**, ensuring modular and reusable code structure
- Implemented basic SQL queries and database interactions, supporting smooth **data retrieval and manipulation** within the application
- Developed User Interface **using AJAX in JSP** and performed **client-side validation** for improved user experience
- Gained exposure to **Agile development methodologies**, participating in **daily stand-ups, sprint reviews, and requirement discussions**
- Involved in Documentation and Use Case Design, utilizing **UML modeling** to develop **Class Diagrams, Sequence Diagrams, and Use Case Transaction Diagrams**
- Participated in design and code reviews, ensuring adherence to coding standards and best practices
- Developed JUnit test cases for all the developed modules to maintain **code quality and test coverage**
- Worked on basic API integrations, developing and testing **RESTful services** for seamless communication between application components.
- Supported deployment processes, assisting in **packaging and deploying applications** across different environments under supervision.
- Used **SVN** as version control, managing code revisions and collaborating effectively with the development team.
