

Summary

- **17+ years** of IT experience in analysis, design, development, documentation, implementing and testing of software systems in Java, J2EE using various **SDLC** methodologies like **Waterfall, Agile/Scrum**.
- Involved in a number of **Micro Service / SOA / IBM BPM 8.5.5 ,8.5.6 & 8.6 Architecture** initiatives focused on all aspects of the organization promoting cost effective business innovation, automation and integration with agile and extreme programming practices.
- Strong programming skills in designing and implementation of multi-tier applications using open source frameworks like **Java 17 Streams and Functional Programming, Spring, Spring Boot (Micro Services), Apache Spark 2.4, JPA, JDBC, Web Service (Restful/SOAP WS), Apache Kafka 2.2, SQL, Apache Cassandra 2.2 And Angular 7.**
- Responsible for delivering best of breed business process management solutions using **IBM BPM 8.5.5 ,8.5.6 & 8.6 and Spark UI toolkit.**
- Involved in process automation collaborations with business users to analyse business processes, recommend RPA based solutions for the processes, and develop robots using **Automation Anywhere RPA** tool.
- Experience with **Use-Case** design, **Class** and **Sequence** diagrams using **UML**.
- Responsible for performance testing of applications using **Apache JMeter**.
- Experience in handling messaging services using **Apache Kafka**.
- Experience with querying on data present in **Cassandra** cluster using **CQL** (Cassandra Query Language).
- Experience in using build/deploy tools such as **Team city, Jenkins, Docker and OpenShift** for Continuous Integration & Deployment for Microservices.
- Good technical abilities and skills developed by determining work ethic and self-learning.
- Administered on and offshore development teams, reviewed the process documentation and coding.

Integration/Technology

- **Programming / Other Languages:** Java/J2EE, Spring, Spring Boot (Micro Services), Apache Spark 2.0, Spring MVC, Spring Batch, EJB 2.0, RESTful/SOAP Web Service, Java Messaging Service (JMS), Apache Kafka 2.2, IBatis 3.x, SQL, Apache Cassandra 2.2, Angular JS 7, Servlets & JSP, Apache Ant 1.6.
- **BPM Tool:** IBM BPM **8.5.5 ,8.5.6 & 8.6** (IBM Process Designer and IBM Integration Designer)
- **RPA Tool:** Automation Anywhere 10.
- **Database:** DB2, Oracle 10g, SQL Server, SQL
- **NoSQL Database** – Cassandra 3
- **Messaging System:** Apache Kafka 2
- **Cloud Technology Training:** Google Cloud Platform Engineering and Infrastructure

Certificate & Training

- **000173** IBM BPM blueprint; IBM WebSphere Lombardi edition v7.1, development (**L2**) certified at Mumbai in Feb 2013
- **000171** IBM BPM blueprint; IBM WebSphere Lombardi edition v7.1, development (**L1**) certified at Mumbai in Dec 2010
- **SCWCD** in June 2009
- **SCJP** in March 2009

Award

- **Global Technology Excellence Awards for Putting Client First in September 2018 (Morgan Stanley).**
- **Delivery Excellence Award in December 2009 (Mastek).**

Experience

Deutsche Bank (June 2019- Present)

Project: DB - Private Bank Inside Trading (PBIT)

Technology: Java, J2EE, Spring, Spring Boot, JDBC, JBPM, Angular 7, SQL, Apache SPARK, Solr.

Role: Senior Consultant

Project Abstract: The PBIT scenario is focused on detecting potential cases of pre-positioning in securities based on Price Sensitive Information (PSI) as defined by regulation as well as Information Barriers Policy - DB Group or other price sensitive market events. This will detect and cover potential cases of insider dealing by DB employees on behalf of a client, External investment firms on behalf of clients or DB Employees. The surveillance would be performed at issuer level, i.e., all the trading activity in instruments of an issuer and their derivatives traded by a given Client or Employee would be combined to generate an alert. The surveillance will look at both internal and external price sensitive events to generate alerts. Data will be gathered from news feeds to support the price movement analysis, focusing on release of PSI or other material news stories. Finally, information gathered from Client metadata and Client Transaction History will be used to rate the risk based on the transaction, the issuer, and the previous (trading) behavior of the clients or employee's security account.

Responsibility:

- Worked in agile framework as an individual contributor Responsibilities include - Interaction with Business team in story grooming, reviewing story/acceptance criteria.
- Responsible for design and built frameworks to integrate with Reuters news services.
- Responsible for design and built frameworks to integrate with Solr.
- Responsible for design and built frameworks for market material events (MME) and profitability modules using **Apache Java SPARK** technology.
- Responsible for design and built frameworks to integrate with mercury systems to get market data.
- Responsible for sequence diagrams and the peer review.
- Designed and developed the **REST based Micro services** using the **Spring Boot**.
- Mentored and supported the application developers with Java\J2ee capabilities and technical issues
- Functional testing and writing unit test case using JUnit.

Project: DB - Nasdaq SMARTS Integration

Technology: Java, J2EE, Spring, Spring Boot, JDBC, JBPM, Angular 7, SQL, Apache SPARK.

Role: Senior Consultant

Project Abstract: The goal of the project is to consume all market alerts (Region : APAC, EMEA ,America) into the DB system which will help the bank to reach its vision to streamline and scale the bank's market trade volume data requirement to meet the demands of the internal analyst.

Responsibility:

- Worked in agile framework as an individual contributor Responsibilities include - Interaction with Business team in story grooming, reviewing story/acceptance criteria.
- Responsible for design and built frameworks.
- Involved in Application and Service Design for the Application.
- Responsible for sequence diagrams and the peer review.
- Designed and developed the **REST based Micro services** using the **Spring Boot**.
- Mentored and supported the application developers with Java\J2ee capabilities and technical issues
- Functional testing and writing unit test case using JUnit.

Project: Market Surveillance Next Gen (NextGen)

Technology: Java, J2EE, Spring, Spring Boot, JDBC, JBPM, Angular 7, SQL.

Role: Senior Consultant

Project Abstract: The goal of the Market Surveillance Next Gen Project is to deliver a solution that will help the bank to reach its vision to streamline and scale the bank's market trade volume data requirement to meet the demands of the internal analyst. This will enable the bank to build out a solution that would improve the current

market trade volume data and reporting capability in a cost effective and timely manner based on a solution architected to eliminate process and data redundancies and overall reporting inefficiencies.

Responsibility:

- Worked in agile framework as an individual contributor Responsibilities include - Interaction with Business team in story grooming, reviewing story/acceptance criteria.
- Responsible for design and built frameworks.
- Involved in Application and Service Design for the Application.
- Responsible for sequence diagrams and the peer review.
- Responsible for application performance testing using Apache JMeter.
- Designed and developed the **REST based Micro services** using the **Spring Boot**.
- Mentored and supported the application developers with Java\J2ee capabilities and technical issues
- Functional testing and writing unit test case using JUnit.

Project: Regional Consolidation Layer (RCL)

Technology: Java, J2EE, Spring, Spring Boot, Hibernate, JPA, Kafka, JBPM, React JS, SQL.

Role: Senior Consultant

Project Abstract: The goal of the US- Regional Consolidation Layer Project is to deliver a solution that will help the bank to reach its vision to streamline and scale the bank's regulatory reporting requirement to meet the demands of the both regulators and internal stakeholders. this will enable the bank to build out a solution that would improve the current regulatory reporting capability in cost effective and timely manner based on a solution architected to eliminate process and data redundancies and overall regulatory reporting inefficiencies.

Responsibility:

- Involved in Application and Service Design for the Application.
- Responsible for Component Design Document and the peer review
- Responsible for design and built real-time batch data processing for 5000 record and file download utility.
- Responsible for application performance testing using Apache JMeter.
- Designed and developed the **REST based Micro services** using the **Spring Boot**.
- Mentored and supported the application developers with Java\J2ee capabilities and technical issues
- Functional testing and writing unit test case using JUnit.

Morgan Stanley Bank (Dec 2014 - March 2019)

Project: Teaming Workflow (Teaming)

Technology: Java, J2EE, IBM BPM 8.6, Angular JS 4, DB2.

Role: Lead Developer

Project Abstract: : The project intends to automate the teaming process for financial adviser .Today, there are a few pain point that are present in the processing of team creation and team name creation (legacy system).The pain points are mainly in the following categories: lack of restrictions, lack of exception management, lack of transparency and high number of manual activities. This initiative intends to overcome these pain points by integration of workflow with legacy system and providing seamless process experience to the end users.

Responsibility:

- Creating Project Plan and Play back Session with Business Users.
- Instrumental in creating recommendations, standards and best practices for IBM BPM 8.6.
- Design and development the archival framework using integration designer mediation module and Apache Solr system.
- **Part of the BPM centre of excellence (COE Team) team.**

Project: Debit Write-Off Process (DWO)

Technology: Java, J2EE, IBM BPM 8.6, Angular JS 4.

Role: Lead Developer

Project Abstract: The project intends to automate the journal debit write off process .Today, there are a few pain point that are present in the processing of journal transactions through JAWS (legacy system).The pain points are mainly in the following categories: lack of restrictions, lack of exception management, lack of transparency and high

number of manual activities. This initiative intends to overcome these pain points by integration BPM with legacy system and providing seamless process experience to the end users. The routing and transaction rules will be implemented using ODM.

Responsibility:

- Creating Project Plan and Play back Session with Business Users.
- Designed and Implemented **SPA** (single page application) using **Angular 4** directives, expressions, routing capabilities for bookmarking, pipes and validations.
- Mentored and supported the application developers with IBM BPM capabilities and technical issues.
- Responsible for design and development of a custom component and data model.
- Design and development Exception handling framework for IBM Process Designer.
- Instrumental in creating recommendations, standards and best practices for IBM BPM development work on IBM BPM 8.6.
- Part of the centre of excellence (COE Team) team.

Project: Retirement Death Distribution Process (RDD)

Technology: Java, J2EE, Spring, **SPA** (single page application) using **Angular 4** directives, expressions, routing capabilities for bookmarking, pipes and validations.

Role: Lead Developer

Project Abstract: The project intends to automate the retirement death distribution process for personal customers within the bank. The project is to be delivered in multiple phases with the first phase being retirement death distribution.

Responsibility:

- Creating Project Plan and Play back Session with Business Users.
- Design and development Exception handling framework for IBM Process Designer.
- Instrumental in creating recommendations, standards and best practices for IBM BPM development work on IBM BPM 8.5.6
- Responsible for design and development of the BPD, Coach Views and Coaches using **Spark UI toolkit**.
- Mentored and supported the application developers with IBM BPM capabilities and technical issues.
- Part of the centre of excellence (COE Team) team.

Project: New Account Opening Document Process (NAODP)

Technology: IBM BPM 8.5.5, DB2, DOJO, Java, J2EE, Restful Web service, Spring, JUnit.

Role: Lead Developer

Project Abstract: The project intends to automate the new account opening process for personal customers within the bank. The project is to be delivered in multiple phases with the first phase being Business Banking.

Responsibility:

- Creating Project Plan and Play back Session with Business Users.
- Responsible for design and development of BPD, Coach View, Coaches and Mediation flow.
- Supporting production and performance issues.
- Instrumental in creating recommendations, standards and best practices for workflow development with supporting Java based services on IBM BPM 8.5.5
- Functional testing and writing unit test case using JUnit, participate in iterative playback sessions with end user and process participants to collect feed-back to help improve interfaces and integration

Tata Consultancy Ltd. [Sep 2012 -Nov 2014]

Project: Account Opening Process of Royal Bank of Scotland

Technology: IBM BPM 8.5.5, Dojo 1.7, DB2, Java/J2EE

Role: Senior Software Engineer

Project Abstract: The project intends to automate the Account Opening process for non-personal customers within the bank. The project is to be delivered in multiple phases with the first phase being Business Banking.

Responsibility:

- Instrumental in creating recommendations, standards and best practices for IBM BPM development work on IBM BPM 8.
- Mentored and supported the application developers with IBM BPM capabilities and technical issues.
- Lead the COE team for review of Project. Aspects included Design, Code review.
- Responsible for design and development of a custom component and data model.
- Responsible for Component Design Document.
- Design and developed Custom coach views like File Upload, File Download, Progress Bar, custom dashboard etc.
- Implemented IBM BPM caching using web sphere DynaCache
- Helping customers realize the benefits that BPM can bring to their business by running custom proof of concept workshops and demonstrating an excellent knowledge of the product and BPM as a whole
- Functional testing and writing unit test case using JUnit, participate in iterative playback sessions with client and process participants to collect feed-back to help improve interfaces and integration

Project: Lending Process of Barclay Bank (Performance Assessment)

Technology: IBM BPM 7.x, DB2

Role: Senior Software Engineer

Project Abstract: Barclays Bank IBM BPM Performance assessments. BPM Processes are performing poorly on peak load and specific browser configurations. Barclays consulted TCS to find out the issues and submit report.

Responsibility:

- Instrumental in creating recommendations, standards and best practices for IBM BPM development work
- Responsible for performance assessment of BPM Process (http watch, Firebug, JavaScript Profiling tools).
- Mentored and supported the application developers with IBM BPM capabilities and technical issues
- Responsible for delivering best of breed business process management solutions using IBM WebSphere Lombardi edition product suite.

Project: Work Queue Management System

Location: Mumbai

Technology: IBM BPM 8.0.1, Dojo 1.7, DB2, SOAP Web Service.

Role: Senior Software Engineer

Project Abstract: The Billing operations team receives handover of orders from Viznet, M6, Liferay and others. Currently the order upload is manual onto a system called vBill. With this project, billing team wants to automate the inflow of orders, auto task allocation to team and tracking of the entire order life cycle.

Responsibility:

- Involved in Process Design and Service Design for the Process.
- Interface design with various interfaces between the Process and external applications including flat files and web services
- Instrumental in creating recommendations, standards and best practices for IBM BPM development work on IBM BPM 8.
- Mentored and supported the application developers with IBM BPM capabilities and technical issues.
- Built an exception handling framework to support process model.

Ness Technology [July 2011 - Aug 2012]

Project: Pearson Success Net

Location: Mumbai

Technology: Java 1.5, spring 2.0, Struts 1.2, RESTful Web Service, Eclipse 3.0, SQL

Role: Senior Software Engineer

Project Abstract: Dash is IPAD application that provides content authored specifically for IPAD for existing Pearson products. These products are from multiple platforms like PSN, PSN+ etc. Teacher access to a platform

agnostic integrated view of some common functionality provided by each platform. In the first phase this would be the ability to see their classes, class rosters, calendars and Mastery reports.

Responsibility:

- Involved in Application and Service Design for the Application.
- Mentored and supported the application developers with Java\J2ee capabilities and technical issues
- Responsible for Component Design Document and the peer review
- Functional testing and writing unit test case using JUnit.

Mphasis an HP Company [Feb2010 – June2011]

Project: Health Care Payer System

Location: Mumbai

Technology: Java 1.5, Spring 2.x, IBatis 3.x, SOAP Web Service, Eclipse 3.0, SQL

Role: Software Engineer

Project Abstract: HPS software provides various functionalities to meet the Medicaid and Medicare program run in US. It provides claim, provider, benefits, member, premium, managed care, care management, etc. HPS system is based on SOA (Service Oriented Architecture). HPS system is developed by using these standards such as MITA, HIPPA, etc. so that any system can connect with it.

Responsibility:

- Involved in Application and Service Design for the Application.
- Mentored and supported the application developers with Java\J2ee capabilities and technical issues
- Responsible for Component Design Document and the sequence diagram.
- Functional testing and writing unit test case using JUnit.

Project: Medicaid Eligibility and Health Information Services

Location: Mumbai

Technology: Java 1.5, Spring 2.x, Liferay 6.0, JSF 2.0, Eclipse 3.0, SQL

Role: Software Engineer

Project Abstract: Verifies the eligibility of a patient presenting for a medical service. The receptionist can perform a verification request on the MEHIS portal. The user receives a response to this verification request and is able to print the response.

Responsibility:

- Involved in Application and Service Design for the Application.
- Mentored and supported the application developers with Java\J2ee capabilities and technical issues
- Responsible for creating sequence diagram.
- Functional testing and writing unit test case using JUnit.

Mastek Ltd [Oct 2007 - Jan 2010]

Project: Share Patient Record Back Office Application

Location: Mumbai

Technology: Java 1.5, Servlets 2.3, JSPX, EJB 2.0, Web Service (Axis 2), Jibx 1.2.1, XML, Sun One Application Server8.1, Eclipse 3.0 and Apache Ant 1.6, Oracle 9i, Eclipse 3.0.

Role: Software Engineer

Project Abstract: The SPR BOA will be used by authorized back office users (currently NHS users located at the London offices) to perform data quality maintenance tasks on CBO (Clinical Back Office). The SPRBOA provides a work item management framework to control data quality maintenance tasks.

Responsibility:

- Mentored and supported the application developers with Java\J2ee capabilities and technical issues
- Responsible for defect fixing and the peer review
- Functional testing and writing unit test case using JUnit.
- Responsible for the application WAI compliance.
