

Jyothsna Pamarthi
AWS DevOps Engineer
jyothsnap997@gmail.com | +1 6605285172 | www.linkedin.com/in/jyothsnap

Professional Summary

- **5+ years of IT Infrastructure Management** experience, including DevOps, AWS, Azure, software build and deployment automation, and system administration in **Red Hat Linux, CentOS, and Windows environments**.
- Extensive knowledge of **Software Development Life Cycle (SDLC)** best practices in Agile, Scrum, and Waterfall methodologies.
- Strong expertise in **cloud computing** with **AWS, Microsoft Azure, and Google Cloud Platform (GCP)**, designing, configuring, and managing **public and private cloud infrastructures**.
- Expertise in **AWS services** such as **EC2, IAM, VPC, Lambda, ECS, EKS, and CloudFormation** for infrastructure as code (IaC), including advanced template configurations with parameters, mappings, conditions, and metadata.
- Designed and implemented **CI/CD pipelines** for web applications and containerized applications using **Jenkins, GitLab CI, Bamboo, and Travis CI**.
- Hands-on experience with **modern DevOps tools: Maven, Ansible, Terraform, Kubernetes, Docker, Gradle, Puppet, and Chef**.
- Automated large-scale deployments using **configuration management tools** and container orchestration with **Kubernetes**, including **Ingress Controllers for HTTP traffic management**.
- Experience setting up **Kafka clusters** in QA and production environments, working closely with Kafka Admin teams.
- Proficient in **Docker containerization**, including building custom Docker images and managing production-grade workflows.
- Experience in **continuous integration and deployment (CI/CD)** on **AWS** using **Docker and Kubernetes**.
- Strong background in **monitoring and logging solutions**, including **Splunk, Grafana, and Nagios**, for both physical and virtual infrastructure.
- Extensive experience in **system administration**: system builds, server installations, upgrades, patching, migrations, troubleshooting, security, disaster recovery, and performance tuning on **Red Hat Linux and Unix systems**.
- Deep knowledge of **networking protocols and devices: TCP/IP, Routers, Switches, SNMP, FTP, SFTP, SUDO, NFS, DNS, DHCP**.
- Strong scripting and automation skills using **Python, Perl, Shell, Go, NodeJS, Groovy, and Ruby**.
- Expertise in **SQL development**, including **complex queries, stored procedures, schema management, functions, DDL, cursors, and triggers**.
- Experience in **enterprise application integration** using **SOAP, REST, OData, JSON, SSIS, T-SQL, Azure Logic Apps, and .NET-based web services**.
- Implemented **RabbitMQ AMQP messaging** for synchronous and asynchronous communication, and **JMS messaging with Apache ActiveMQ**.
- Experience managing **AWS IAM** users, groups, and policies for secure access control.
- Strong analytical, presentation, and communication skills with the ability to **adapt to new technologies and fast-paced environments**.

Education: Master's in Computer Science from Northwest Missouri State University

Technical Skills:

Java/J2EE Technologies	Java/J2EE, JDBC, EJB, JMS
AWS/ Other Cloud Services	EC2, ECR, ECS, Elastic Beanstalk, Lambda, ELB, CloudFront, Kinesis, Route 53, S3, RDS, DynamoDB, DAX Accelerator, Elastic cache, SQS, SNS, API Gateway, Cognito, IAM, CloudWatch, CloudTrail, CloudFormation, Code Commit, Code Build, Code Deploy, Code Pipeline, Encryption, IBM Cloud, QTS Cloud
Web Technologies	HTML, SOAP/ RESTful Web Services, JSP, CSS, XML, JSON, Servlets, jQuery, JavaScript
Frameworks	Spring Modules, Struts, JSF MVC, Log4j, Testing, JUnit
ORM Frameworks	Hibernate, Spring JDBC
Development Methodologies	Agile (SCRUM, TDD), Waterfall
IDE's	Eclipse, NetBeans, IntelliJ, IBM Data cap Suite
Databases	IBM DB2, Oracle, DynamoDB, MySQL
Build/Automation Tools	Maven, Ant, Jenkins, TeamCity
Servers	IBM WebSphere, Oracle WebLogic, Apache Tomcat Server
Tools	SOAP-UI, JMeter, JBoss drools, IBM Jazz, Splunk, IBM Heap Analyzer
Version Control/Project Management	JIRA, GitHub, SourceTree, IBM RTC, SVN
Operating Systems	Windows, Linux, AIX, Unix, Mac OS
Other Tools/ Utilities	IBM FileNet, IBM Data cap, IBM Content Collector, UML, WINSXP, PUTTY, Xplore LDAP client, Squirrel client, Workflow server, MS Office

EXPERIENCE

Client: Progressive Insurance, OH (Mar 2024 – Present)

Role: AWS/Cloud DevOps Engineer

Responsibilities:

- Designed, built, and deployed cloud-based solutions, helping clients migrate legacy infrastructure to a cost-effective cloud environment.
- Extensive experience with AWS services: **EC2, VPC, EBS, Auto Scaling, Elastic Beanstalk, S3, ECS, EKS, Lambda, IAM, RDS, CloudWatch, SNS, and CloudFront.**
- Set up **infrastructure and CI/CD pipelines** for various environments (Dev, QA, Staging, Production) while adhering to **SDLC best practices in Agile, Scrum, and Waterfall methodologies.**
- Managed **Jenkins CI/CD pipelines** for automated builds, testing, and deployment, troubleshooting build issues during the Jenkins process.
- Developed **AWS CloudFormation and Terraform scripts** for infrastructure provisioning, automation, and resource management.
- Implemented **Cloud Custodian** for automating tag compliance across 1000+ AWS resources.

- Automated deployments using **CloudFormation Stack Sets** to enforce owner tagging, creation timestamps, and metadata on resources.
- Configured and maintained **ECS and EKS clusters**, deploying Kubernetes pods and scaling application containers using **ConfigMaps and Helm Charts**.
- Deployed a **serverless web application** on AWS Lambda, including:
 - Hosting a static website on **S3**
 - API integration via **API Gateway**
 - Data storage using **DynamoDB**
 - Backend logic using **Lambda functions**
- Designed and implemented a **microservices architecture** using Kubernetes (EKS) and Docker for scalability.
- Integrated **Kafka messaging** and reprocessed failure messages using offset IDs.
- Configured a **single Amazon SQS queue** for multiple AWS accounts to centralize email notifications.
- Implemented **AWS CloudWatch and CloudTrail** for real-time logging, monitoring, and debugging of cloud resources.
- Automated AWS infrastructure provisioning using **Terraform, Ansible, and Jenkins**, ensuring efficient deployment and configuration management.
- Developed **Ansible playbooks** for automated application deployment, system configuration, and patching.
- Worked with **Azure Resource Manager (ARM)** for **template-based deployments, role assignments, and activity log monitoring**.
- Installed and configured Jenkins plugins for Git integration and set up **SCM polling** for continuous builds using **Maven and Gradle**.
- Integrated **SonarQube and FindBugs** into **Maven/Gradle** projects for code quality checks.
- Maintained and managed **Docker containers, images, and registries**, collaborating with development teams to implement **continuous delivery**.
- Deployed applications in a **Kubernetes cluster using AWS-Kops (EKS)**, configuring and managing the Kubernetes dashboard for easy access.
- Used **GitLab, GitLab Runner, Jenkins, and Docker** to streamline workflow automation and improve DevOps efficiency.
- Implemented a **continuous delivery framework** using **Jenkins, Puppet, Maven, and Nexus** in a Linux environment.
- Monitored **Linux servers** for CPU, memory, and disk utilization using **Splunk and Tanium**, ensuring performance optimization.
- Worked with **Apache Tomcat 9.0, JBoss, and Oracle** for application hosting and management.
- Automated infrastructure management tasks using **Shell scripting, PowerShell, VBScript, and Python**.
- Scheduled automated jobs using **Rundeck** for optimized deployment workflows.

Environment:

Ansible, Docker, AWS, Jenkins, Maven, Git, Kubernetes, Chef, Nexus, Docker Registry, Tomcat, Splunk, JBoss, Tanium, Rancher, Oracle, Shell Scripting, PowerShell, VBScript, Python, Apache Tomcat 9.0, JIRA, Linux, Windows

Client: All State, IL (Aug 2023 – Feb 2024)

Role: AWS/Cloud DevOps Engineer

Responsibilities:

- Migrated on-premise applications to **AWS Cloud**, optimizing performance and cost-efficiency.
- Developed **Python-based automation scripts** using **Puppet** to manage and deploy Java applications across Linux servers.
- Designed and maintained **CI/CD pipelines** in **Jenkins**, automating builds with **Ant** and **Maven** to streamline software delivery.
- Managed **AWS EC2 instances, AMIs, and Elastic Beanstalk templates**, ensuring high availability and scalability.
- Configured **Elastic Load Balancers (ELB)** with **EC2 Auto Scaling** to dynamically handle traffic surges.
- Automated infrastructure provisioning using **Terraform**, reducing manual setup time.
- Integrated automated builds with a deployment pipeline, ensuring seamless software releases across **integration, QA, and production environments**.
- Deployed **Puppet and Puppet Dashboard** for **configuration management**, improving consistency across multiple servers.
- Managed **branching and version control** strategies using **Git** and **SVN**, enhancing collaboration across teams.
- Implemented **server-side user authentication and administration** for access control.
- Developed **Python scripts** to extract, transform, and load (ETL) data from **DynamoDB to MySQL**, improving data consistency.
- Created and scheduled **Linux Cron jobs** and **Jenkins jobs** to automate builds and deployments.
- Deployed **Java applications on Apache Tomcat Application Servers** and optimized runtime performance.
- Configured **Nexus Artifactory** for artifact management, ensuring versioned storage of builds.
- Implemented **unit testing with JUnit** and **server configuration validation** before deployments.
- Maintained **infrastructure as code (IaC)** best practices, enhancing deployment efficiency.
- Monitored and troubleshooted infrastructure issues, ensuring **99.9% uptime** across deployed environments.
- Managed **ClearQuest and Quality Center** for tracking infrastructure change requests and issue resolution.

Environment:

AWS (EC2, S3, RDS, ELB, IAM, CloudFormation), Terraform, Jenkins, Git, Puppet, Docker, Java/J2EE, Apache Tomcat, Maven, Ant, Linux, SonarQube, Nexus, JIRA, Shell/Groovy scripting, LAMP, Quality Center, ClearQuest

Client: Wipro, Remote (Jan 2019 – Aug 2022)

Role: AWS/DevOps Engineer

Responsibilities:

- **Designed, built, and deployed** cloud-based solutions for clients migrating from legacy infrastructure to AWS.
- **Extensively worked** with AWS services, including **EC2, VPC, EBS, Auto Scaling, Elastic Beanstalk, S3, ECS, Lambda, IAM, RDS, CloudWatch, SNS, and CloudFront** for scalable cloud solutions.
- Automated **infrastructure provisioning and configuration** using **Terraform and AWS CloudFormation**, leveraging modular Terraform scripts for **EKS, VPC, EC2, AMIs, ELB**, and other AWS resources.
- **Developed and managed CI/CD pipelines** in **Jenkins**, integrating **Git, Nexus, and deployment scripting** to streamline software delivery.
- Designed and deployed **serverless microservices** using **AWS Lambda, API Gateway, S3, CloudWatch, and SNS**.
- Automated **EC2 Auto Scaling and Load Balancer configurations** using Python SDK, ensuring optimal performance.
- Managed **AWS SNS and SQS** for distributed messaging and event-driven architectures.
- **Developed infrastructure automation** using **AWS CDK, Terraform, and the AWS Serverless Application Model (SAM)**.
- Created and enforced **S3 bucket policies and lifecycle rules**, utilizing **Glacier** for cost-effective storage and backups.
- **Designed containerized applications** with **Docker** and managed deployment using **Kubernetes, Helm, and Docker Compose**.
- Configured **Kubernetes clusters**, managing **nodes, ConfigMaps, selectors, and services** to optimize application scaling and availability.
- Migrated CI/CD pipelines from **Jenkins to Harness**, utilizing **Helm charts and Artifactory** for Kubernetes-based deployments.
- **Developed Ansible Playbooks** for deployment automation and day-to-day server administration.
- Implemented **Docker-based microservices**, including **Docker container orchestration** using Kubernetes and integration with **ELK (Elasticsearch, Logstash, Kibana)** for monitoring.
- Led test-driven development (TDD) practices for Terraform automation scripts, ensuring infrastructure reliability.
- Worked on **automating dev and test environment setup** using **Terraform and Jenkins** for seamless infrastructure testing.
- Configured **Kubernetes UI** for enhanced **cluster monitoring and pod management** across environments.

Environment:

AWS (EC2, VPC, EBS, S3, Lambda, IAM, RDS, CloudFront, SNS, SQS, CloudWatch, CloudFormation), Terraform, Kubernetes, Helm, Docker, Jenkins, Harness, Nexus, Git, Ansible, Python SDK, AWS CDK, AWS Serverless Application Model (SAM), ELK Stack (Elasticsearch, Logstash, Kibana).
