

Kalyan Srinivas | Senior Full Stack .Net Developer
+1 (971)-236-2455 | kalyankrishnapasetty22@gmail.com | [linkedin](#)
Core Skills: C#, ASP.NET Core, | AZURE | AWS | JIRA | XML | Entity Framework

PROFESSIONAL SUMMARY:

- 10+ years of experience across the full SDLC, specializing in Agile methodologies and delivering scalable applications.
- Proficient in C#, VB.NET, ASP.NET Core, and ASP.NET MVC, focusing on robust backend service and API development with Entity Framework Core.
- Experienced in frontend development using JavaScript (ES6+), TypeScript, and popular frameworks such as React, Angular, Vue.js, along with Razor and Blazor for dynamic web UI creation.
- Strong expertise in database management with relational (SQL Server, MySQL, PostgreSQL, Oracle) and NoSQL databases (MongoDB, Azure Cosmos DB).
- Hands-on with cloud technologies (Microsoft Azure, AWS), working with services such as Azure App Service, Lambda, EC2, S3, and RDS for scalable solutions.
- Proficient in containerization using Docker, Kubernetes, and OpenShift, along with CI/CD tools like Azure DevOps, Jenkins, and Terraform for streamlined deployment and automation.
- Familiar with messaging systems like Kafka, RabbitMQ, and ActiveMQ, and experienced with web services (WCF, SOAP, RESTful APIs).
- Expertise in version control systems (Git, SVN, TFS) and modern authentication protocols (OAuth 2.0, JWT).
- Strong experience in performance monitoring, debugging, and generating reports using tools like New Relic, ELK Stack, Swagger, Crystal Reports, and SSRS.
- Familiar with frontend frameworks like Bootstrap, and backend technologies such as .NET Framework, WPF, and MVVM patterns.
- Skilled with IIS, Kestrel, and Nginx web servers and experienced with testing frameworks such as NUnit, MSTest, XUnit, and Mockito, emphasizing Test-Driven Development (TDD).
- Proven ability to communicate complex technical concepts to non-technical stakeholders and collaborate within Agile teams using JIRA, Confluence, and Slack for project tracking and communication.

TECHNICAL SKILLS:

Languages: C#, VB.NET, JavaScript (ES6+), TypeScript, SQL, PL/SQL, T-SQL
Frameworks and Web Development: ASP.NET Core, ASP.NET MVC, Entity Framework Core, ASP.NET Web API, Razor, Blazor, HTML5, CSS3, XML, React, Angular, Vue.js, jQuery, Bootstrap, .NET Framework, WPF, MVVM
Development Environments: Visual Studio, VS Code, Rider IDE, Eclipse
Cloud Platforms and Services: Microsoft Azure: Azure App Service, Azure Functions, Azure Storage, Azure Logic Apps, Azure AD, Azure DevOps, Azure Key Vault, Azure Data Factory (ADF), Azure Service Bus, AWS: EC2, S3, RDS, Lambda, API Gateway, Autoscaling
Database Systems: SQL Server, MySQL, PostgreSQL, Oracle, MongoDB, Azure Cosmos DB
Containerization and Orchestration: Docker, Kubernetes, OpenShift
CI/CD and Automation Tools: Azure DevOps, Jenkins, Terraform
Messaging and Integration: Kafka, RabbitMQ, ActiveMQ, WCF, SOAP, RESTful APIs
Testing and Quality Assurance: NUnit, MSTest, XUnit, Mockito, Test-Driven Development (TDD)
Web Servers and Hosting: IIS, Kestrel, Nginx
Agile Project Management and Collaboration: JIRA, Confluence, Scrum, Kanban, Slack
Version Control and Security: Git, SVN, TFS, OAuth 2.0, JWT
Performance Monitoring: New Relic, ELK
Documentation: Swagger, Crystal Reports, SSRS

PROFESSIONAL EXPERIENCE:

Fifth Third Bank | Cincinnati, Ohio

Oct 2022 — Till Date

Senior .NET Developer

Responsibilities:

- Conducted thorough requirements analysis, collaborating with stakeholders to gather and define project requirements for software solutions.
- Designed and implemented scalable architecture using ASP.NET Core, C#, and Entity Framework Core, achieving 90% uptime and reducing maintenance incidents by 20%.
- Implemented full-stack solutions on Microsoft Azure cloud, utilizing Azure App Service, Azure Functions, Azure Storage, and Azure Logic Apps for seamless integration and scalability.
- Integrated SQL Server and Azure Cosmos DB databases, optimizing data retrieval speeds by 40% through efficient indexing and query optimization.
- Developed RESTful APIs and GraphQL endpoints, achieving an average response time of under 100ms and enhancing data retrieval efficiency by 25%.
- Used JavaScript ES6+, HTML5, CSS3, and Bootstrap for responsive and user-friendly interfaces.
- Automated infrastructure deployment and management using Terraform, Docker, and Kubernetes, optimizing application scalability and reliability.
- Configured and optimized Internet Information Services (IIS) for hosting and scaling web applications on Windows servers.
- Built interactive web applications using Blazor and Razor, achieving a 95% user satisfaction rate based on usability testing feedback.
- Tracked project progress, managed tasks, and collaborated with teams using JIRA for agile project management.
- Implemented XML transformations (XSD, XSLT) for data interchange and system integration, ensuring compatibility and data integrity.
- Implemented Kafka for event streaming, enabling real-time data processing and reducing latency by 50%.
- Designed and implemented caching strategies for performance optimization, utilizing Redis and other caching mechanisms.
- Crafted and executed reports utilizing SQL Server Reporting Services (SSRS) while overseeing application logs through the ELK stack.
- Developed applications using Rider IDE, optimizing development workflows and enhancing code quality.
- Managed secrets and sensitive information using Azure Key Vault, ensuring secure application configuration and management.
- Implemented authentication and authorization using Azure Active Directory (Azure AD), ensuring secure access to applications and APIs.
- Implemented CI/CD pipelines using Azure DevOps, achieving a deployment frequency of twice weekly and reducing manual deployment errors by 90%.
- Managed dependencies and package management using NuGet, ensuring efficient library integration and version control.
- Documented and exposed APIs using Swagger specifications, facilitating API discovery and integration for external developers.
- Conducted unit testing and practiced Test-Driven Development (TDD) using NUnit, ensuring software quality and reliability throughout the development lifecycle.

Environment: ASP.NET Core, C#, Entity Framework Core, Microsoft Azure, Kafka, RESTful APIs, GraphQL, Blazor, Razor, GitHub, JavaScript ES6+, SSRS, Terraform, Docker, Kubernetes, Azure DevOps, IIS, JIRA, XML, Rider, Azure AD, NuGet, ELK Stack, Swagger, NUnit.

State of New York | New York, NY

Aug 2020 – Sept 2022

Senior .NET Developer

Responsibilities:

- Developed scalable web applications using C#, ASP.NET Core, and Entity Framework, ensuring high performance and maintainability.
- Designed and implemented RESTful APIs and microservices architecture using ASP.NET Web API, reducing API response times by 30% through optimized endpoint design.
- Integrated MySQL and MongoDB databases with .NET applications, enhancing data access efficiency by implementing indexing strategies that improved query performance by 40%.
- Deployed applications on Azure App Service, utilizing Azure Data Factory (ADF) and Logic Apps for ETL processes, achieving a 50% reduction in data processing time.
- Implemented serverless computing using Azure Functions and message queuing with Azure Service Bus, improving application scalability and responsiveness.
- Automated build and deployment pipelines using Jenkins, ensuring continuous integration and delivery of software releases.
- Developed and debugged applications using Visual Studio, optimizing development workflows and enhancing productivity.
- Created dynamic and responsive user interfaces using HTML5, CSS3, TypeScript, React, Redux, and React Router, resulting in a 25% increase in user engagement metrics.
- Implemented OAuth 2.0 authentication and authorization mechanisms, ensuring secure access to APIs and applications.
- Developed server-side rendering applications with Razor and AJAX for asynchronous operations, reducing page load times by 50% through efficient data fetching techniques.
- Conducted unit and integration testing using MSTest and JSON for data serialization, ensuring code quality and reliability of software products.
- Monitored application performance and troubleshooting using New Relic, ensuring proactive system health and performance management.
- Managed source code versioning and collaboration using Git, ensuring code integrity and efficient teamwork.
- Orchestrated containerized applications using Docker and Kubernetes, achieving a deployment frequency of twice weekly and reducing deployment errors by 80%.
- Utilized Kestrel as a web server for ASP.NET Core applications, optimizing web application performance and scalability.
- Tracked project progress and managed tasks using JIRA, ensuring transparency and alignment across development teams.
- Optimized database queries and performance using query optimization techniques, improving database response times by 30% and enhancing overall application efficiency.
- Generated reports and implemented business intelligence solutions using Crystal Reports, providing valuable insights and data visualization for stakeholders. Implemented caching mechanisms using Redis and MemoryCache to reduce database load and improve application response times by 40%.
- Collaborated closely with cross-functional teams to gather requirements and ensure seamless integration of features, resulting in a 20% increase in project delivery speed.

Environment: C#, ASP.NET Core, Entity Framework, MySQL, MongoDB, Azure, HTML5, CSS3, TypeScript, React, Razor, Jenkins, Visual Studio, OAuth 2.0, MSTest, JSON, New Relic, Git, Kestrel, JIRA, Crystal Reports.

Molina Health Care | Bothell| WA

March 2018 – July 2020

.NET Developer

Responsibilities:

- Developed desktop applications using VB.NET, .NET Framework, and WPF with MVVM architecture, ensuring efficient data binding and separation of concerns.
- Designed and implemented responsive web applications using HTML5, CSS3, JavaScript, and Ajax, incorporating jQuery for DOM manipulation and asynchronous operations.
- Utilized Angular and TypeScript to build dynamic front-end interfaces, reducing page load times by 40% and enhancing overall application performance.
- Integrated PostgreSQL databases with .NET applications, writing efficient queries and utilizing ORM frameworks where applicable.
- Implemented cloud solutions on AWS, including EC2, S3, RDS, Lambda, and Autoscaling, reducing infrastructure costs by 20% while maintaining 99.99% uptime.
- Developed and maintained RESTful APIs using API Gateway and Lambda functions, enabling seamless integration with external services.
- Implemented real-time web functionality using SignalR, improving application responsiveness and user experience, as evidenced by a 40% decrease in latency.
- Managed source code versioning and collaboration using GIT, ensuring code integrity and effective teamwork.
- Automated build, test, and deployment processes using Jenkins and CI/CD pipelines, reducing deployment time by 50% and improving deployment reliability by 30%.
- Deployed applications on Openshift, leveraging containerization for scalability and portability across different environments.
- Practiced Agile methodologies, specifically Scrum, participating in sprint planning, daily stand-ups, and retrospective meetings using JIRA for project management.
- Implemented logging and monitoring using log4Net, ensuring comprehensive error tracking and performance analysis.
- Configured and maintained Nginx servers for load balancing and reverse proxying, enhancing application security and optimizing performance metrics by 25%.
- Conducted unit and integration testing using XUnit, ensuring code quality and reliability of software releases.
- Collaborated effectively with cross-functional teams using Eclipse for development and debugging, fostering a collaborative environment for project success.

Environment: VB.NET, .NET Framework, MVVM, WPF, XAML, Angular, Typescript, PostgreSQL, AWS, SignalR, GIT, Jenkins, Nginx, Openshift, Agile (Scrum), Eclipse, JIRA, log4Net, XUnit.

Hexaware | Hyd,India

May 2014– Nov 2017

.NET Developer

Responsibilities:

- Developed scalable web applications using C#, ASP.NET, and MVC framework for high performance and responsiveness.
- Implemented Object-Oriented Programming (OOP) principles such as inheritance, polymorphism, and encapsulation to enhance code reusability and maintainability.
- Utilized LINQ and ADO.NET to interact with SQL Server databases, writing optimized queries and stored procedures to handle complex data operations.

- Integrated XML and SOAP protocols to facilitate seamless communication between distributed systems, utilizing WSDL for service definitions.
- Designed and implemented asynchronous messaging systems using RabbitMQ, improving application efficiency and real-time data processing capabilities.
- Leveraged JavaScript for client-side scripting and enhanced user interface functionalities.
- Implemented Agile and Kanban methodologies to optimize development processes, leading to a notable 20% increase in team productivity.
- Managed version control and collaborated effectively using SVN and Agile methodologies, participating in daily stand-ups and sprint planning meetings.
- Conducted unit and integration testing using Mockito.

Environment: C#, ASP.NET, LINQ, MVC, ADO.NET, SQL, PL/SQL, XML, SOAP, WSDL, RabbitMQ, JavaScript, SVN, Agile, Kanban, Mockito, Slack.
