Objective

Dedicated AWS / DevOps Engineer with expertise in designing, implementing, and managing robust cloud infrastructure solutions. Proficient in maintaining robust CI/CD pipelines using Jenkins, automating the end-to-end build, test, and deployment processes. Adept at leveraging Git and GitHub for version control and collaborative development, as well as utilizing Jira for effective project management. Highly skilled in deploying applications using Infrastructure as Code tools like Terraform, managing users, optimizing storage solutions, and creating comprehensive, scalable, and cost-effective cloud strategies. Seeking a challenging position to apply my AWS expertise, coupled with a continuous drive for innovation and excellence.

Professional Experience

AWS / DevOps Engineer

ADCAR Technology LLC | July 2020 – Present

- Designed and implemented end-to-end infrastructure solutions on AWS platform, ensuring optimal performance, scalability, and resilience.
- Implemented and maintained robust CI/CD pipelines using Jenkins, automating the end-to-end build, test, and deployment processes, resulting in 30% faster release cycles and reduced manual errors.
- Demonstrated scripting proficiency in Bash and Python to automate routine tasks, enhancing efficiency and reducing manual efforts. This not only reduced deployment time but also minimized the risk of human errors during the provisioning process.
- Utilized Git and GitHub for version control, facilitating collaborative development and ensuring code integrity across the team.
- Implemented Infrastructure as Code using Terraform to automate the deployment and management of AWS resources. Utilized Terraform to build various infrastructure modules such as VPCs, RDS instances, EC2 instances, S3 buckets, load balancers, auto-scaling configurations, and more.
- Utilize Docker to containerize applications, ensuring a consistent and isolated environment for each application. Demonstrated proficiency in building, managing, and optimizing Docker containers, and effectively pushing them to AWS Elastic Container Registry (ECR) for secure

storage and version control of container images. This streamlined the deployment process and enhanced the reliability of application delivery.

- Monitored and analyzed cloud and system performance using AWS CloudWatch, CloudTrail, Prometheus, Grafana, and Linux system logs, ensuring proactive issue detection and system performance improvements
- Managed and maintained Linux servers in AWS, ensuring optimal performance, security, and reliability for mission-critical applications, and consistently demonstrated the ability to troubleshoot and resolve complex server-related issues.
- Proficiently managed EC2 instances, ensuring optimal Compute configuration, performance tuning, and automated backups.
- Orchestrated efficient storage solutions using AWS S3, integrating lifecycle policies, multi-region replication, and server-side encryption.
- Administered IAM roles, policies, and groups to ensure secure and least privileged access to AWS services for users and applications.
- Oversaw the networking components, such as VPCs, subnets, route tables, and security groups, ensuring isolation, scalability, and secure communication across services.
- Collaborated with cross-functional teams to understand application requirements, offering AWS solutions that align with business goals.

Sterile Processing Lead Tech

Northwell Hospital - Long Island, New York

March-2015 – June-2020

- Implemented process improvements that increased the efficiency of the sterilization cycle, reducing turnaround time by 20% while maintaining compliance with industry's best practices.
- Conducted quality assurance checks to detect and rectify any deviations from established standards, ensuring all surgical instruments met rigorous hygiene requirements.
- Collaborated with surgical and administrative teams to optimize workflows. Trained new technicians in proper sterilization techniques and safety protocols, enhancing team performance and knowledge.
- Maintained comprehensive documentation of sterilization cycles and outcomes to support hospital audits and regulatory reviews. Ensured all practices aligned with the Joint Commission and CDC guidelines.

CERTIFICATIONS: AWS Certified Solutions Architect

Education

Associate in applied science

Nassau Community College, New York

Associate in education

St. Louis College of Education, Ghana

SKILLS

Cloud Technologies: VPC, EC2, ECS, S3, EBS, EFS, RDS, ELB, Auto-Scaling, Route 53, IAM

Automation: Terraform, Docker, Git/GitHub, CI/CD

Networking & Security: IAM Policies, Security Groups, NACLs, WAFs, SSL/TLS Certificates

Monitoring & Troubleshooting: CloudWatch, CloudTrail, Logs Analysis, Prometheus, Grafana
