PROFESSIONAL SUMMARY

Experienced **Java Full Stack Developer** with over **6 years** of expertise in designing and developing **scalable, enterprise-grade applications** using **Java** and its modern frameworks, including **Spring Boot, Spring MVC, Spring Security, JDBC, JPA, Hibernate and NodeJS**. Skilled in building secure, modular **RESTful API** and **GraphQL API**, leveraging microservices architecture, **AI-powered analytics**, and serverless deployments for cloud-based scalability. Strong in implementing **microservices architecture**, containerization with **Docker**, and deploying applications on **AWS, Azure, GCP** for high availability and scalability. Well-versed in **performance tuning, security best practices** such as **JWT, OAuth 2.0, and role-based access control (RBAC)**, and following **SOLID principles** for maintainable code.

- Proficient in **Java (Spring Boot, Spring MVC, J2EE, Hibernate, JDBC, JPA), NodeJS, ExpressJS, Flask and AI/ML Model Integration (TensorFlow, MLflow, AWS SageMaker, OpenAI API)**. ensuring optimal **backend performance, database efficiency, and API security**.
- Expertise in **developing microservices-based architectures**, leveraging **Docker and Kubernetes** for efficient deployment and service orchestration.
- Strong knowledge of **PostgreSQL (SQL), MySQL and MongoDB (NoSQL)**, with experience in **Spring Data JPA, Hibernate ORM, stored procedures, and SQL query optimization**.
- Hands-on experience in **front-end development** using **ReactJS, Angular, and TypeScript**, implementing **modern UI/UX best practices** with **Tailwind CSS** and **advanced JavaScript**.
- Well-versed in **CI/CD pipelines, DevOps, and automated testing, ML Model Deployment Pipelines using TensorFlow Serving, MLflow, AWS Lambda** using **JUnit, Mockito, Jenkins, and GitHub Actions** for reliable software delivery.
- Strong understanding of **design patterns, OOP, and SOLID principles**, ensuring **maintainable and modular codebases**.
- Passionate about **agile software development**, collaborating effectively with cross-functional teams using **JIRA, Slack, and Confluence** to drive efficient project delivery.

TECHNICAL SKILLS

Programming Languages: JAVA, JavaScript, TypeScript, Python, C#, C, C++, Swift, PL/SQL, J2EE, Scala.

Web Technologies:

- **Frontend:** HTML5, CSS, Tailwind CSS, JavaScript (ES6+), jQuery, Angular (v2–v13+), TypeScript, React, NextJS, VueJS, BackboneJS, Redux.
- **Backend:** Java (Spring Boot, Spring MVC, J2EE, Hibernate, JDBC, JPA), NodeJS, ExpressJS, Flask, Vertx.
- **API & Data Formats:** RESTful APIs, GraphQL, JSON, XML, Swagger UI, TensorFlow, PyTorch.

Database and Server: PostgreSQL, MySQL, Oracle, NoSQL (MongoDB, DynamoDB, Firebase), Cassandra, RedShift, H2, ORM (Mongoose, Sequelize, Hibernate), Apache Tomcat, Nginx.

DevOps:

- **Containerization and Orchestration:** Docker, Kubernetes, Helm Charts.
- **CI/CD Pipelines & Automation:** Jenkins, GitHub Actions, GitLab CI/CD, AWS Code Pipeline.
- **Cloud & Infrastructure as Code (IaC):** AWS Cloud, Azure, Google Coud Platform, Terraform, Ansible, Kafka.

Tools: Visual Studio, IntelliJ IDEA, PyCharm, pgAdmin, Eclipse, Postman, Net Beans, GitHub, Android Studio, Xcode.

EDUCATION

The University of Texas at Arlington -- *Master of Science in Computer Science*

Jan 2022 – Dec 2023

CERTIFICATIONS

- Introduction to Backend Development – Meta (via Coursera)
- Meta Backend Developer Professional Certificate – Meta (via Coursera)
- Python Developer – Microsoft (via Coursera)
- IBM Full Stack JavaScript Developer – IBM (via Coursera)

EXPERIENCE

JP Morgan Chase – *Full Stack Developer*

Jan 2024 – Present | Plano, Texas

- Worked in the **Consumer and Community Banking (CCB)** division, building and maintaining core services for digital payments, customer accounts, and transaction workflows used by millions of users daily.
- Led the development of backend services using **Java Spring Boot**, managing everything from user authentication to payment processing with strong uptime and low-latency requirements.
- Created and maintained **REST APIs** with **Spring Boot** and **Node.js**, used across customer-facing applications like online banking, mobile payments, and digital wallets.
- Developed **dynamic, responsive SPAs** using **ReactJS** and **Angular**, ensuring seamless frontend-backend interaction with **Spring Boot APIs** while following **modern UI/UX principles**.
- Integrated **Hibernate** and **Spring Data JPA** with **PostgreSQL**, **MongoDB (SQL, NoSQL)**, handling high-volume transactional data with efficient query tuning and proper indexing to maintain fast response times.
- Built internal **admin dashboards** and user-facing components using **ReactJS** and **Angular**, connected to **Spring Boot** and **Node.js APIs** for seamless front-to-back communication.
- Worked on **microservices architecture**, containerizing services with Docker and deploying them via Kubernetes clusters managed across dev, QA, and production environments.
- Set up **NGINX** as a reverse proxy to manage routing, SSL termination, and API security between frontend clients and backend services.
- Implemented **CI/CD pipelines** using **Jenkins**, **GitHub Actions**, and integrated with **Azure DevOps**, reducing manual intervention during code releases and ensuring quick rollback in case of deployment issues.
- Deployed and monitored services on **AWS** (EC2, S3, RDS, Lambda), **Azure**, **GCP**, ensuring applications met performance SLAs during peak traffic like payroll days or bill due dates.
- Added monitoring for all backend services using **Prometheus** and **Grafana**, helping the team catch latency spikes, API failures, and database slow queries before they affected users.
- Collaborated with data teams to support **AI-based fraud detection systems**, building APIs that integrated real-time transaction flows with predictive models hosted on **AWS Sage Maker** and **Azure Machine Learning Studio**.

Environment: Java 8+, Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, JDBC, PostgreSQL, MySQL, ReactJS, Angular, RESTful APIs, JWT, OAuth 2.0, GraphQL, Microservices, Docker, Kubernetes, NGINX, AWS (EC2, S3, RDS, Lambda), Azure, GCP, Jenkins, GitHub Actions, CI/CD, Agile methodologies, JIRA, Webpack, Unit Testing (JUnit, Mockito).

Vitra Health – Full Stack Developer

Jun 2020 – Dec 2023 | Denver, Colorado

- Developed and maintained secure, scalable applications supporting Vitra Health's core services, including **Adult Foster Care (AFC), Group Adult Foster Care (GAFC), and Adult Day Health programs.**
- Designed and implemented HIPAA-compliant **RESTful APIs** using **Java Spring Boot, Spring MVC, Spring Security,** and **Node.js/Express.js**, facilitating seamless integration between caregivers, providers, and **electronic health record (EHR)** systems.
- Integrated **PostgreSQL (SQL)** and **MongoDB (NoSQL)** databases to manage patient records, appointments, and caregiver schedules, optimizing queries for real-time data access and reporting.
- Architected a microservices-based system using Spring Boot and Docker, deploying on Kubernetes across **Azure Cloud** infrastructure to ensure scalability and high availability for Vitra Health's cloud-based platform.
- Implemented authentication and authorization mechanisms using **Spring Security, OAuth 2.0, and JWT**, securing patient and provider data while ensuring regulatory compliance with **HIPAA and GDPR.**
- Developed **ReactJS-based interactive dashboards** for caregiver and patient portals, enabling real-time access to home care plans, telehealth consultations, and medical reports.
- Designed **GraphQL APIs** to optimize querying of large-scale healthcare datasets, reducing over-fetching of patient records and enhancing system performance.
- Enabled **real-time WebSocket communication**, allowing instant updates between caregivers, nurses, and patients, improving urgent care coordination and scheduling efficiency.
- Automated **CI/CD pipelines** using **Jenkins** and **GitLab**, ensuring rapid deployment of feature updates for home care coordination tools, with extensive unit testing using **JUnit** and **Mockito.**
- Developed and integrated **AWS Lambda serverless functions, Azure functions, and GCP**, enabling real-time processing and storage of large health assessments and visit logs, ensuring cost-efficient computations.
- Integrated **AI/ML models** for patient risk prediction and personalized home care recommendations using Flask, AWS Sage Maker, and **Azure ML Studio**, ensuring scalable AI-powered decision-making in healthcare applications.
- Leveraged **GraphQL APIs** to optimize the querying of **AI-driven health analytics** while reducing over-fetching of patient records.
- Mentored junior developers in **Java Spring Boot, ReactJS**, and healthcare software best practices, fostering a culture of collaboration, technical excellence, and innovation.

Environment: Java 8+, Spring Boot, Spring Security, Hibernate, JDBC, ReactJS, Angular, PostgreSQL, MongoDB, RESTful APIs, GraphQL, HL7/FHIR, Web Sockets, AWS (EC2, S3, Lambda, RDS), Azure, GCP, Docker, Kubernetes, NGINX, Jenkins, GitLab, CI/CD, JUnit, Mockito, Tailwind CSS, Flask, Agile methodologies.

Citi Bank – Full Stack Developer

Jun 2018 – May 2020 | Plano, Texas

- Worked within **PBWM (Personal Banking and Wealth Management)** division, building secure, customer-facing banking applications that support core services such as digital payments, personal loans, account management, and real-time transaction monitoring.
- Developed and deployed scalable banking applications using **Java, Spring Boot, and Angular**, ensuring seamless integration across **PBWM systems** while maintaining full compliance with banking regulations.

- Designed and optimized **RESTful APIs** with **Spring Boot** and **Spring MVC**, connecting to internal core banking platforms for real-time processing of **balances, transfers, and account updates**.
- Implemented strong security protocols using **Spring Security, OAuth 2.0, and JWT**, fully aligned with **PCI-DSS** compliance standards.
- Built and integrated **AI/ML-driven fraud detection models** using AWS SageMaker and TensorFlow, improving risk scoring and transaction anomaly detection across PBWM operations.
- Developed and maintained a **microservices architecture** with **Spring Boot, Docker, and Kubernetes**, supporting core PBWM offerings like loan processing and payment gateways.
- Managed backend data across **PostgreSQL (SQL), MongoDB (NoSQL), and Redis**, optimizing query performance and ensuring the integrity of financial records and user metadata.
- Created and integrated **GraphQL APIs** to streamline data delivery for executive and customer-facing dashboards, improving reporting speed and reducing API load.
- Set up and maintained **CI/CD pipelines** with **Jenkins and GitLab**, supporting automated deployments and quick feature rollouts for PBWM tools.
- Built **real-time WebSocket-based notification systems**, giving customers instant updates on payments, approvals, and security alerts.
- Configured **NGINX as a reverse proxy** to optimize API performance, enhance security, and provide load balancing across microservices.
- Led API testing and integration using **Postman and Swagger/OpenAPI**, ensuring secure, reliable, and high-performance communication between banking microservices.

Environment: Java 11+, Spring Boot, Spring Security, Hibernate, JDBC, Angular, ReactJS, PostgreSQL, MongoDB, Redis, GraphQL, Kafka, RabbitMQ, Elastic-Search, RESTful APIs, Web Sockets, Docker, Kubernetes, AWS (ECS, Lambda, S3, RDS), Azure, GCP, NGINX, Jenkins, GitLab, Terraform, CI/CD pipelines, Microservices Architecture, Agile Methodologies, PCI-DSS Compliance.
