Professional Summary

Certified ServiceNow Application Developer and Implementation Specialist with extensive experience in designing, implementing, and optimizing ServiceNow solutions for ITSM, ITOM, ITBM, and ITAM. Proficient in configuring ServiceNow modules, including CMDB, Discovery, Service Mapping, and Event Management, to enhance operational visibility and efficiency. Demonstrated expertise in developing custom Service Catalog items, workflows, and automation scripts to streamline business processes, resulting in improved service delivery and reduced operational costs. Skilled in integrating ServiceNow with third-party tools using REST/SOAP APIs and building custom reports for performance analytics and business insights.

Possesses a solid foundation in Java development, RESTful API design, and Spring Boot, with hands-on experience in database management using MySQL. Adept at working in Agile environments, collaborating with cross-functional teams, and delivering compliant IT solutions aligned with ITIL processes.

Key technical proficiencies include:

- ServiceNow ITSM, ITOM (Discovery, Service Mapping, Event Management), ITBM, ITAM
- Client-side and server-side scripting (Business Rules, Client Scripts, UI Actions, Script Includes)
- ServiceNow integrations using REST/SOAP APIs
- Java development, Spring Boot, and MySQL database management
- Performance analytics, workflow automation, and security incident response

Certifications:

ServiceNow Certified Application Developer

ServiceNow Certified Implementation Specialist - IT Service Management

AT&T, Plano, TX

April 2024 – December 2024

ServiceNow Developer

Key Responsibilities & Achievements:

- Spearheaded the implementation and configuration of ServiceNow ITOM modules for enhanced visibility across infrastructure, focusing on Event Management and Discovery.
- Customized MID Servers to enable secure data collection from remote environments for Discovery and CMDB integration.
- Developed automation workflows for Event Management that resulted in a 30% reduction in event handling time and improved incident correlation accuracy.

- Worked on Service Mapping to identify service dependencies and their impact on business operations, leading to more accurate change impact assessments.
- Optimized HRSD workflows by integrating with HRIS systems, reducing manual data entry and ensuring GDPR compliance.
- Configured Service Portfolio Management (SPM) for comprehensive service lifecycle tracking, including automated service retirement workflows that improved portfolio governance.
- Collaborated with IT teams to implement solutions aligned with business needs and ITIL processes.
- Integrated ITAM with CMDB, ITSM, ITOM, and third-party tools for seamless asset tracking and reporting.

UBS Financial Services, New York, NY
ServiceNow Developer

May 2023 – March 2024

Key Responsibilities & Achievements:

- Configured the ITBM module to streamline project management, resulting in more efficient portfolio and resource allocation for the internal teams.
- Developed custom Service Catalog Items and Record Producers for business units, improving service fulfillment accuracy by 30%.
- Integrated ServiceNow ITSM with existing enterprise tools to create a unified dashboard for all service management operations, enhancing overall visibility.
- Implemented change management processes within ServiceNow, streamlining approval workflows and ensuring better change visibility for the organization.
- Designed and developed custom client scripts and UI policies to enhance the user interface, increasing platform adoption by 15%.
- Worked with internal teams to establish SLA policies, automating service level agreement enforcement and ensuring compliance.
- Worked with cross-functional teams, including ITSM, ITOM, Security, and Procurement, to deliver end-to-end asset management solutions

Scotiabank, New York, NY
ServiceNow Developer

March 2022 – April 2023

Key Responsibilities & Achievements:

- Worked on the implementation of Change Management workflows, automating approvals and reducing time to implement changes by 25%.
- Developed and maintained Service Catalog Items and Record Producers, streamlining service requests and reducing approval bottlenecks.
- Created custom reports using performance analytics, providing management with real-time insights into incident resolution times and resource allocation.
- Integrated third-party monitoring tools with ServiceNow for event management, improving overall system uptime by proactively addressing issues.

- Assisted with the deployment of ServiceNow Discovery for accurate infrastructure mapping, improving visibility into all active CIs within the CMDB.
- Collaborated with security teams to design and implement Security Incident Response workflows, ensuring that critical incidents were flagged and responded to within SLAs.
- Streamlined onboarding and offboarding processes by automating tasks such as IT asset provisioning and account setup using ServiceNow Orchestration.
- Created custom UI Policies and Client Scripts to automate workflows and improve user experience within the ServiceNow interface.
- Implemented problem management workflows to ensure incidents are tracked back to root causes and resolve recurring issues effectively.
- Collaborated with security teams to design and implement Security Incident Response workflows, ensuring that critical incidents were flagged and responded to within SLAs.
- Applied knowledge of banking processes and regulatory frameworks to develop compliant ITAM solutions.

JCPenney, Dallas, TX
ServiceNow Developer

June 2021 – February 2022

Key Responsibilities & Achievements:

- Assisted with the ServiceNow ITSM implementation, providing configuration expertise for Incident, Problem, Change, and Request management.
- Worked on CMDB implementation, ensuring that all assets and configuration items were accurately represented, and aligning them with internal ITIL processes.
- Developed custom Service Catalog items to improve service request management, allowing the organization to fulfill requests with minimal manual intervention.
- Implemented approval policies and Workflows to ensure that change management processes adhered to compliance and security standards.
- Assisted in developing automated email notifications for the Incident and Change Management processes to keep stakeholders informed of progress.
- Supported ServiceNow system upgrades, ensuring that existing configurations were retained and that new features were implemented smoothly.
- Delivered technical documentation for custom configurations, improving internal knowledge sharing and reducing troubleshooting time.
- Worked on self-service features for end-users, reducing manual support requests and improving overall service desk efficiency by 30%.
- Assisted in setting up knowledge management in ServiceNow, enabling users to self-solve incidents and reducing the incident backlog.
- Created and maintained technical documentation for ServiceNow configurations, customizations, and development work.
- Troubleshoot and resolve technical issues in the ServiceNow platform, ensuring optimal performance.
- Developed workflows, scripts, and automation to optimize IT asset lifecycle processes.

Key Responsibilities & Achievements:

- Developed and maintained Java applications under the guidance of senior developers, focusing on core functionality and performance.
- Assisted in designing and implementing RESTful APIs for smooth communication between front-end and back-end systems.
- Participated in unit testing using JUnit to ensure the quality and functionality of developed features.
- Worked with the Spring Boot framework to implement basic business logic and microservices.
- Assisted in database management by writing basic SQL queries for retrieving and manipulating data in MySQL.
- Collaborated with team members in Agile Scrum environments, attending daily stand-ups, sprint planning, and reviews.

Key Responsibilities & Achievements:

- Designed, developed, and implemented multiple catalog items and record producers using ServiceNow to create customized user experiences for service requests.
- Built and configured Workflows and Flows to automate business processes and improve operational efficiency.
- Developed complex client-side scripts (e.g., Client Scripts, UI Policies, UI Actions) to customize the user interface and enhance the user experience.
- Created server-side scripts (e.g., Business Rules, Script Includes, Scheduled Jobs) using Javascript to implement backend logic and business rules for various modules.
- Developed Service Catalog solutions, including item fulfillment and request approval processes, based on business requirements.
- Worked on troubleshooting and debugging ServiceNow incidents, problems, and change requests, resolving technical issues quickly to minimize downtime.
- Created new tables, forms, and UI elements to support business processes outside of standard ServiceNow modules.
- Automated the scanning and identification of all components within the IT infrastructure using ServiceNow Discovery, streamlining the process of asset detection.
- Experienced in developing and managing integrations between ServiceNow and external systems using REST/SOAP APIs to optimize data exchange and workflow automation.
- Worked on enhancements for Incident, Knowledge, Change management and Service Catalog modules.
- Implemented custom solutions for client different business challenges and enhancing the product features to meet business requirements.
