WINDOWS SYSTEMS ADMINISTRATOR | SERVER ENGINEER | TEAM MANAGER | IT MANAGER

- Systems Engineer with in-depth experience working in technical and customer support roles seeking to provide expertise in Windows System Administration.
- Windows Server utilizing advanced skills for maintaining and supporting Windows 2008 R2/2012 R2/2016/2019 server operating systems while maintaining server performance and reliability.
- Experienced in identifying and implementing existing, new and emerging technologies; developing project plans, schedules, and budget requirements to provide total customer satisfaction.
- Experience with managing and maintaining the Microsoft Windows Active Directory environment and the transition to Microsoft Azure Active Directory and Microsoft O365
- Knowledgeable technical team lead in server operations specializing in building, installing, setup, and configuring servers, systems and other complex project work.
- Demonstrates experience working with third-party vendors and managing projects and technical teams.
- Supported and maintained data center operations including servers, operating systems, networking, storage and participating in a 24x7 on-call support rotation and serving as the primary contact for hands and eyes escalations.

CORE SKILLS

System Administrator | Team Manager | IT Support | Infrastructure
Project Management | Server Build & Deployment | Data Migration | Collaboration

TECHNICAL SKILLS

Windows Server 2003/2008/2012/2016, VMWare/VCenter/VSphere, Active Directory, Azure Active Directory, DNS, DHCP, WINS, VLAN, Group Policy, Remote Desktop Servers/Terminal Services, EMC SAN, IBM ESS Storage, Hitachi DLM, NetIQ, Chef, Ivanti HEAT/Patchlink, Windows 2003/2008/2012/2016/2019, Windows 7/Windows 10 administration, BMC Remedy Change Request/Incident Report/Asset Management/Configuration Management, ServiceNow Change Request/Incident Report/Asset Management/Configuration Management, Microsoft O365, Microsoft Azure, Microsoft SharePoint, Microsoft Exchange, Lotus Notes/Domino, IBM X Series, IBM BladeCenter, Dell PowerEdge Servers, HP Proliant, VMWare ESXi, vCenter, vROPs, NetApp, Citrix Metaframe, Microsoft Clustering, Powershell and VB scripting, SysPrep, Norton/Symantec Internet Security, McAfee VSE/ENS and ePO, Crowdstrike Falcon, Sitescope, Nagios and Solarwinds monitoring, Okta, ADAudit Plus, ActiveBatch, SSL certificates

PROFESSIONAL EXPERIENCE

Triwest Healthcare Alliance - Contract

Progilysis Solutions, Phoenix, AZ

Windows Systems Engineer, Sr. – Server Support – January 2020 – January 2024

- Managed and tuned platforms to ensure expected availability, performance and security levels were achieved.
- Maintained overall system compliance with information security policies and procedures and supported annual security accreditation.
- Designed, developed, and implemented configuration settings for all systems to meet security requirements.
- Installed and setup Windows application and jump servers and collaborated with applications teams for their use with CareRadius, Triwest 360 and other VA interfaced systems.
- Worked closely with networking team to setup and maintain server network connectivity to ensure proper function of applications and processes. Coordinated with network team for setup of routers, switches and load balancers and configuration of firewalls for proper server connectivity and security.
- Utilized PowerShell scripting to set up automation and maintenance tasks in the environment.

- Worked on incident and problem tickets in ServiceNow to resolve issues and performed root cause analysis of issues in the environment. Planned, scheduled, and communicated system changes to other team members prior to implementation utilizing the change management features of ServiceNow.
- Assisted ServiceNow developers with creation of customized service requests for items such as virtual server builds and requests for creating administrator and service accounts.
- Implemented the installation, maintenance and performance metrics (up-time, adherence to Service Level Agreements) for server systems.
- Managed and maintained the Microsoft Active Directory environment and assisted with the transition to Microsoft Azure Active Directory and Microsoft O365.
- Primarily responsible for the creation and maintenance of privileged administrator and service accounts/group memberships for secure network share and application access.
- Assisted with the conversion of the on prem Microsoft AD environment to Microsoft Azure AD utilizing tools such as Microsoft Teams, Microsoft SharePoint, and Microsoft Exchange Online.
- Installed, implemented and maintained Okta SSO and MFA to secure access for servers and applications in the environment.
- Worked incident tickets related to Okta access issues and the creation of Okta accounts related to application and server access.
- Installed, implemented SolarWinds monitoring.
- Registered, renewed and implemented SSL certificates for applications and web sites utilizing GoDaddy and other certificate authorities.
- Managed, installed, and maintained the virtual server environment utilizing VMWare VCenter and IBM CMP.
- Managed complex Group Policies in the Active Directory environment and maintained high-level security standards.
- Maintained access to database reports utilizing Microsoft SQL Server Reporting Services (SSRS).
- Maintained documentation on systems, processes, and procedures utilizing Microsoft SharePoint and knowledgebase articles in ServiceNow.
- Utilized Atlassian Jira software to manage project planning and workflow using Scrum and Kanban boards.
- Utilized ManageEngine AD Audit Plus for Active Directory auditing and analysis.
- Provided after-hour support for high priority systems (on call).

Honeywell Aerospace Account

IBM, Phoenix/Tempe, AZ

Technical Team Lead/System Administrator – Systems Integration - February 2005 – June 2013

Capgemini, Phoenix/Tempe, AZ

Technical Team Lead/Senior Consultant – Systems Integration - July 2013 – June 2019

- Team leader for the systems integration team in coordination with server support and operations supporting over 8000+ servers worldwide.
- Managed approximately 20+ systems administrators in both the US and India specializing in supervising server build and provisioning, complex project work assignment, tier 3 ticket queue management and dispatching, providing mentoring as needed.
- Built, configured, and supported Windows 2008 R2/2012 R2/2016 physical and virtual servers in the local data center as well as remote site facilities globally.
- Collaborated with application, database, and web support teams along with assigned project managers to work with server system refreshes, new installs and other complex projects on customer systems and environments.
- Maintained and deployed OS installation images using the Microsoft Deployment Toolkit with Lite Touch Installation, Sysprep, VMWare templates and other imaging tools.
- The planning, development and implementation of client projects including server refreshes, data migrations, and physical to virtual and virtual to virtual server migrations.
- Developed and maintained automated scripts for quality control checks on servers for server builds using VBScript and PowerShell.
- Assisted with VMWare administration on multiple VMWare farms managing storage, snapshots, VMotion, vROPS, VCenter, templates and networking configurations.

Todd Kump

- Managed local security policies and server hardening by installing client endpoints and running server health checks using the NetIQ and Chef security tools.
- Coordinated site coverage for data centers in the Phoenix metro-area including creating on-call schedules, participating in the on-call rotation, and acting as the primary escalation contact for hands and eyes issues.
- Performed server racking and hardware installation in support of server builds and deployments.
- Helped with the VMWare/ESX and Nutanix setup on Cisco UCS, including coordination of resources across teams.
- Planned, developed, and implemented the Honeywell Integrated Cloud (HIC) environment which automated virtual server builds and allowed customers to request virtual servers on demand.
- Advanced skills with DNS, DHCP, WINS, and other IP network protocols.
- Configured servers with drivers, firmware, and host bus adapters for connection to EMC SAN, Hitachi Dynamic Link Manager, IBM Shark, and other storage solutions.
- Collaborated with the network and firewall teams to connect servers to the customer network and ensured all security and customer policies were enforced.
- Devised, maintained, and performed server decommissions processes for all assets removed from the environment.
- Excellent documentation skills for all system configurations and processes.
- Patched and secured servers per customer standards using Ivanti Endpoint Management & Security Suite (EMSS), NetIQ and Chef.
- Worked on incident and problem tickets in ServiceNow to resolve issues and performed root cause analysis of issues in the environment. Planned, scheduled, and communicated system changes to other team members prior to implementation of project related tasks utilizing the change management features of ServiceNow.
- Maintained proper asset management of server configuration items in ServiceNow CMDB when performing server build and project related tasks.
- Offered Tier 3 customer support for steady-state server operations and resolved all client issues in a timely and efficient manner.

EDUCATION

Santa Fe Community College, Santa Fe, NM - **Associate of Applied Science, Computer Science**
