

LAHARI CH | Python Developer

Location: Arlington, Virginia, 22202 | **Phone:** (716) 907 - 6478 | **Email:** laharis164@gmail.com | **LinkedIn**

SUMMARY

- Around **5 years** of hands-on experience in **Python3** development, leveraging **Django** and **Flask frameworks** to design and deploy scalable web applications, achieving a 30% improvement in system efficiency and reducing response time by 25%.
- Streamlined **CI/CD** pipelines with **AWS, Docker, Kubernetes**, and **Jenkins**, **cutting** deployment time from 2 hours to 30 minutes and improving development-to-production efficiency by 60%.
- Enhanced system design and performance through best practices in **Object-Oriented Programming (OOP)** and data structures, resulting in a 35% improvement in code quality and maintainability.
- Collaborated with cross-functional teams to deploy scalable **CI/CD pipelines** and deliver complex software projects on time, exceeding client expectations by 15%.
- Spearheaded the implementation of microservices architecture using **Python, Spring Boot**, and **Node.js**, leading to a 40% increase in application modularity and maintainability.

TECHNICAL SKILLS

Languages:	Python3, Java EE Technologies (Java, JPA, JMS), JavaScript, TypeScript, Go
Frameworks:	React.js, Redux, Angular, Node.js, Spring Boot, Django, Flask, Express.js
Data Bases:	MongoDB(NoSQL), MySQL, RDBMS, PostgreSQL
DevOps:	AWS, Docker, Azure, Kubernetes, Jenkins
Core Competencies:	CI/CD Pipelines, MicroServices, API Design(REST), System Design

PROFESSIONAL EXPERIENCE

Northern Trust, US Python Developer

Jan 2024 – Present

- Designed and implemented **multi-threaded Python3 applications**, improving data processing speed by 50% for real-time analytics projects, leveraging **Spring Boot** for enhanced system scalability.
- Architected and implemented **scalable microservices** using **Django** and **Flask**, leading to a 35% reduction in system downtime by designing fault-tolerant systems with robust error-handling mechanisms.
- Designed, developed, and deployed over 50 **RESTful APIs** for data-intensive applications, handling over 1 million daily requests with optimized caching and load balancing techniques that reduced API response times by 40%.
- Partnered with front-end development teams utilizing **React.js, Redux**, and **Angular** to seamlessly integrate back-end services, improving front-end performance by 25% and reducing UI load times by 1.2 seconds on average.
- Built and automated CI/CD pipelines with **Jenkins, Docker**, and **Kubernetes**, enabling continuous integration and deployment of 20+ production releases per month with 99% system uptime.
- Conducted complex SQL and NoSQL query optimization for **MongoDB, MySQL**, and **PostgreSQL**, increasing database performance by 30% and lowering storage costs by 15% through effective schema design and indexing strategies.
- Migrated legacy systems to the cloud using **AWS** and **Azure**, improving system scalability by 50% while cutting infrastructure costs by 25% through efficient resource allocation and utilization of cloud-native tools

Northern Trust, USA (Intern) Python Developer

Jun 2023 – Dec 2023

- Designed and deployed a real-time data analysis platform using **Python3**, integrated with **JavaScript** and **TypeScript** for dynamic, interactive visualizations that increased user engagement by 60% within the first quarter.
- Developed event-driven systems using **Spring Boot** and **Django**, processing over 5TB of data daily with a fault-tolerance rate exceeding 99.9%, ensuring uninterrupted service for high-traffic applications.
- Automated repetitive workflows through custom **Python scripting**, saving over 200 work hours annually, and introduced logging systems that reduced debugging times by 40%.
- Contributed to API gateway development with **Node.js** and **Express.js**, enabling support for 10,000+ concurrent users and increasing request throughput by 45%.
- Engineered a **NoSQL** schema for **MongoDB**, accommodating high-volume, real-time applications and maintaining a sub-100ms latency while handling 3 million records daily.
- Developed robust **GraphQL APIs** with **Python** and integrated them with front-end applications, enhancing data query efficiency and reducing data transfer sizes by 30%.

Elda Health
Software Developer

May 2020 – Jun 2022

- Proficient in programming languages such as **Python 3**, **Java EE Technologies (JPA, JMS)**, **JavaScript**, **TypeScript**, and **Go**.
- Hands-on experience with frontend frameworks like **React.js**, **Redux**, **Angular**, and backend technologies including **Node.js**, **Spring Boot**, **Django**, **Flask**, and **Express.js**.
- Skilled in database management with expertise in **MongoDB (NoSQL)**, **MySQL**, **PostgreSQL**, and **RDBMS**.
- Adept at designing and implementing **RESTful APIs**, **Microservices**, and scalable **System Design** solutions.
- Optimized application performance by refactoring codebases and fine-tuning **CI/CD pipelines**, reducing deployment times by up to 40%.
- Efficiently resolved **complex technical** challenges in backend integration, database optimization, and system scalability.

Cybage Software (Intern)
Software Developer

May 2019 – May 2020

- Automated deployment processes using **AWS CodePipeline**, **CodeBuild**, and **Jenkins**, reducing deployment times by 40% and ensuring zero-downtime releases.
- Designed and deployed containerized job schedulers with **Docker Swarm** and **Kubernetes**, automating repetitive tasks and reducing human error by 70%.
- Designed and deployed serverless applications with **AWS Lambda** and **Azure Functions**, reducing infrastructure overhead by 40% and ensuring system efficiency.
- Proficient in **CI/CD pipelines**, **REST API design**, **microservices architecture**, and **system design** for end-to-end software development lifecycle.
- Built custom middleware for **real-time notifications** and **WebSocket communications** in **Node.js** and **Express.js**, enhancing user interactivity by 35%.
- Developed **GraphQL APIs** with **Django** and **Flask**, integrating them with **React.js** and **Angular** front-end applications to enhance query efficiency and reduce data transfer sizes by 30%.
- Created real-time tracking systems using **Python3** and **PostgreSQL**, reducing data latency for logistics platforms by 50%.

EDUCATION

Masters of Science, Data Science

Aug 2022 – Dec 2023

University at Buffalo

Bachelor of Technology, Electronics and Communications

Aug 2016 – May 2020

Andhra University

PROJECTS

Data-Driven Traffic Ticket Analysis | Python, Flask, AWS, PostgreSQL, Docker

Mar 2023 – Aug 2023

- Analyzed over 100,000 traffic tickets using Python and Snowflake, improving resolution strategies by 67% through Alteryx-driven ETL enhancements.
- Refined data querying and manipulation with Advanced SQL and Python on AWS RDS, reducing ticket resolution times by 20% through machine learning optimizations.

Edu Tracker | Next.js, MongoDB, REST API, Microservices

Jan 2023 – Apr 2023

- Implemented a SPA Student Progress Tracker using Next.js, with MongoDB for data management, and deployed via Docker, improving page load times by 30%.
- Designed a RESTful API for the course management microservices, reducing data processing time by 35% with Optimized GET, DELETE, POST, and PUT operations.
