Summary

Experienced DevOps Engineer with a solid background in AWS cloud infrastructure management. Adept at enhancing system performance and ensuring high availability through optimized architecture and automation tools. Notable projects include: - Managing and optimizing AWS environments for development, testing, and production. - Deploying containerized applications using Docker and Kubernetes. - Implementing CI/CD processes with Jenkins for faster release cycles. Demonstrates a focus on system stability and scalability, seeking to apply her expertise to improve overall service reliability.

Skills

Operating Systems: Unix, Linux, Windows

DevOps Tools: AWS, Azure, Chef, Puppet, Open stack, Nagios, Jenkins, Maven, Git/GitHub, Docker, Kubernetes, Ansible, GCP, Docker Registry

Continuous Integration Tools: Bamboo, Team city, Jenkins/Hudson

Monitoring Tools: Grafana, Splunk

Build Tools: Maven, Gradle

Web Servers: Tomcat, Apache

Programming/Scripting: Shell Scripting, Perl, Python, C, C++, Java, Ruby, SQL

Databases: MySQL, Oracle, MS SQL Server, Azure

Issue Tracking: JIRA

Additional Skills: DevOps, SRE, CI/CD, Containerization

Work Experience

HITACHI ENERGY

Chennai, India

Associate DevOps engineer

Jul 2019 - Dec 2022

- Managed and optimized AWS cloud infrastructure across development, testing, and production environments, utilizing services such as EC2, Lambda, and DynamoDB to ensure scalability, high availability, and fault tolerance.
- Designed EC2 instance architecture to meet high availability application architecture and security parameters.
- Automated cloud infrastructure management using Ansible, which eliminated repetitive tasks and ensured consistent environment configurations.
- Implemented CI/CD processes using Jenkins, creating automation scripts to streamline deployments, and improve deployment speeds.
- Administered Git and Bitbucket repositories, managing the version control processes including branching, tagging, merging, and repository optimization to enhance code release efficiency.
- Deployed and managed containerized applications using Docker and Kubernetes, ensuring scalability and reliability across multiple environments.
- Created and maintained Docker Images for ECS Cluster and worked on creating Service and Task Definitions, contributing to efficient continuous delivery pipelines.
- Monitored production applications for performance, assisted in troubleshooting performance issues, and generated performance reports.
- Created and implemented alert policies on AWS CloudWatch Dashboards for real-time insights and monitoring, critical for incident resolution.
- Collaborated with development teams to resolve configuration issues, streamline environment setup, and manage applications in both containerized and serverless architectures, optimizing system stability and efficiency.
- Managed Linux environments for cloud infrastructure, integrating system updates, configuring environments, and ensuring high system performance and security.
- Researched and integrated cutting-edge tools and technologies on AWS to enhance operational efficiency while optimizing costs and ensuring scalability.

Education

UNIVERSITY OF SOUTH FLORIDA

Master of Science, Software engineering

Jan 2023 - Present

- Achievements: GPA:3.6/4

G. NARAYANAMMA INSTITUTE OF SCIENCE AND TECHNOLOGY

Bachelor of technology, Electrical and Electronics Engineering

Aug 2015 - May 2019

- Achievements: GPA: 3.5/4
