

Mahesh Babu Jagarlamudi

DevOps/Cloud Engineer

Phone: (816) 256-6445

Mail ID: maheshjagarlamudi6445@gmail.com

OBJECTIVE

To leverage 5+ years of expertise in **DevOps Engineering**, **cloud architecture**, **automation**, and **infrastructure management** across AWS, Azure, and GCP, driving **efficient cloud deployments**, cost optimization, and high availability for enterprise applications.

PROFILE SUMMARY

- **DevOps Engineer** with 5+ years of experience in **cloud infrastructure management** across AWS, Azure, and GCP.
- Expertise in CI/CD pipelines, leveraging Jenkins, Gitlab CI/CD, Bitbucket, and Azure DevOps for automated software deployment.
- Strong hands-on experience with **Terraform** for **Infrastructure as Code (IaC)**, optimizing cloud resource provisioning.
- Deep understanding of **AWS** services (EC2, RDS, Lambda, S3, CloudFront, Kubernetes, EKS, CloudFormation, Docker).
- Extensive experience with **containerization** and **orchestration** using **Docker**, **Podman**, **Kubernetes** (EKS, AKS, GKE), and OpenShift.
- **Scripting and automation** expert using Python, Bash, and PowerShell to automate system administration tasks.
- Strong **cloud security** knowledge, implementing IAM, AWS Security Hub, CIS Benchmarks, and security best practices.
- Experienced in **monitoring and logging** using Prometheus, Grafana, CloudWatch, and ELK Stack.
- Hands-on experience with **serverless architectures** using **AWS Lambda**, **Azure Functions**, and **GCP Cloud Functions**.
- Proven ability to design and implement **cloud architectures** for **high availability**, **fault tolerance**, and **disaster recovery**.
- Proficient in managing cloud costs using **AWS Cost Explorer** and **Azure Cost Management**.
- Experienced in **Kubernetes** orchestration with **Helm** for managing containerized applications at scale.
- Strong background in **auto-scaling** and **load balancing** solutions using AWS ELB, Azure Load Balancer, and GCP Load Balancing.
- Well-versed in **Linux/Unix system administration**, ensuring performance optimization and automation.
- Expertise in **networking**, **security**, and **VPC configurations**, including Load Balancers (ALB, NLB), API Gateway, and SSL/TLS.

TECHNICAL SKILLS:

- **Cloud Platforms:** AWS, Azure, Google Cloud (GCP), Kubernetes (EKS, AKS, GKE), Helm
- **CI/CD and Automation Tools:** Jenkins, Hudson, Anthill Pro, Bamboo, Cruise Control, Team Foundation Server, TeamCity, Ansible, Chef, Puppet.
- **Deployment Tools:** Nexus, IIS, Tomcat
- **Version Control:** Git, GitHub, Bitbucket, GitLab, Subversion (SVN), TFS, VSS, Perforce, ClearCase
- **Security & Compliance:** IAM, AWS Security Hub, CIS Benchmarks, DevSecOps practices
- **Application Monitoring Tools:** Nagios, Mercury, IBM RTC, Prometheus, Grafana, ELK Stack, Datadog
- **Bug Tracking Tools:** Jira, Azure DevOps, Bugzilla, Clear Quest, Footprints, Quality Center, LoadRunner
- **ETL Tools:** Discovery, Data Studio, Data Architect
- **Automation and Configuration Tools:** Terraform, Chef, Puppet, Ansible, Docker, Gerrit
- **Middleware Administration:** JBoss, WebSphere, WebLogic, Apache, Jetty
- **Networking:** AWS ELB, Azure Load Balancer, VPC, VPN, DNS, SSL/TLS
- **Virtualization and Cloud Computing:** VMware, Hyper-V, EC2, Azure VMs
- **Operating Systems:** Unix, Solaris, Linux, HP-UX, Windows
- **Database:** Oracle, SQL Server, DB2
- **Programming Languages:** C, C++, Java(J2EE), Groovy, C#, .NET
- **Scripting:** Shell, Perl, Python, Bash, PowerShell, Ruby, Groovy
- **Build Automation Tools:** Apache Ant, Maven, Gradle, MS Build

EDUCATION:

University of Missouri – Kansas City, Master of Science in Computer Science

WORK EXPERIENCE:

Barnes-Jewish Hospital, St. Louis, Missouri, USA | Senior DevOps Engineer | April 2024 – Present

DESCRIPTION: Barnes-Jewish Hospital is a leading academic medical center known for its world-class healthcare services, advanced research, and patient-centered care. Working with development and operations teams, using tools to manage and automate infrastructure and application configurations, and writing infrastructure-as-code and Identifying issues in the application or deployment processes, and troubleshooting problems.

Key Responsibilities and Achievements:

- Designed and managed **Azure CI/CD pipelines** using **Azure Pipelines**, reducing deployment cycle time by **50%**.
- Implemented **Infrastructure as Code (IaC)** using Azure Resource Manager (ARM) templates, Terraform, and Ansible.
- Automated **Azure resource provisioning**, including Azure VMs, AKS (Azure Kubernetes Service), and App Services.
- Deployed and managed **Docker containers** within Azure Kubernetes Service (AKS).
- Implemented **Helm charts** for efficient Kubernetes application management.
- Managed **source code repositories in Azure Repos**, ensuring best practices for version control.
- Wrote automation scripts in **PowerShell and Bash** for deployments and infrastructure management.
- Set up **monitoring and alerting** using **Grafana** and **Prometheus**, proactively identifying performance issues and reducing downtime by **20%**.
- Secured deployments by managing **Azure Active Directory (AAD)** and **Azure Key Vault** for secrets and certificates.
- Enforced **security policies using Azure Policy** and managed compliance through **Azure Security Center**.
- Tracked and managed agile development workflows using **Azure DevOps Boards and JIRA**.
- Monitored and optimized **Azure cloud cost and resource usage** using Azure Cost Management and Azure Advisor.
- Integrated **automated testing frameworks** like Selenium and JUnit into CI/CD pipelines.

Hallmark Cards, Missouri, USA | AWS DevOps Engineer | Feb 2023 – March 2024

DESCRIPTION: Hallmark Cards is a leading American company specializing in greeting cards, gifts, and related products. Orchestrated scalable cloud infrastructure, automated deployment pipelines, and implemented robust security, disaster recovery, and high-availability solutions to optimize operational efficiency.

Key Responsibilities and Achievements:

- Designed, deployed, and managed **AWS cloud infrastructure**, leveraging EC2, S3, RDS, VPC, and Lambda.
- Implemented **Infrastructure as Code (IaC)** using **AWS CloudFormation** and **Terraform**, reducing setup errors and improving consistency by **40%**.
- Developed and maintained **CI/CD pipelines** using AWS Code Pipeline, Jenkins, and GitLab CI/CD.
- Automated deployment and infrastructure changes using **Python and Bash scripting**.
- Ensured **AWS security best practices** by implementing **IAM policies** and **KMS**, improving security compliance by **40%**.
- Designed **disaster recovery and high-availability solutions** using AWS Backup and Elastic Load Balancing.
- Deployed applications using **AWS Elastic Beanstalk, ECS, and EKS** for containerized workloads.
- Created **AWS environment automation scripts** using AWS CLI, Shell, and Python.
- Managed **AWS-based SQL databases** such as Amazon RDS and Aurora, optimizing backups and performance.
- Worked on **server virtualization** using Docker and implemented load balancing via **Nginx**.

British Airways (TCS), Chennai, India | DevOps Engineer | July 2021 – Dec 2022

DESCRIPTION: British Airways (BA), is one of the world's leading airlines and the flag carrier offers a range of travel experiences, including its iconic first-class and business-class services. Ensured that all code changes, deployments, and infrastructure configurations meet regulatory requirements and protect customer data. This includes performing security audits and implementing vulnerability assessments.

Key Responsibilities and Achievements:

- Deployed application code and **provisioned Azure cloud environments** using Azure DevOps (VSTS).
- Configured **Kafka clusters**, optimizing message partitioning and replication factors, improving message throughput by **35%** and reliability.
- Automated **Azure resource provisioning** using PowerShell and ARM templates.
- **Implemented centralized logging** by forwarding Kubernetes container logs, application logs, and system logs into Azure Event Hubs and Splunk.

- Monitored **Azure-based Kubernetes environments** using Grafana and Prometheus, ensuring proactive alerting and reporting.
- Installed and managed **OpenShift on Azure**, supporting scalable and secure containerized workloads.
- Configured **Maven** dependencies and integrated it with **Git**, reducing build issues by **30%** and optimizing deployment cycles.
- Managed **Azure DevOps repositories and permissions**, supporting efficient source code management.
- Created documentation in **Confluence** and tracked project progress using **JIRA**.
- Performed **Azure migration tasks**, including backup, state scanning, and user profile restoration.

Gilead Sciences, Inc., Chennai, India | Cloud Engineer | June 2019 – June 2021

DESCRIPTION: Gilead Sciences, Inc, is a leading biopharmaceutical company dedicated to advancing therapeutics in areas of significant unmet medical need and company's portfolio extends beyond virology to include oncology, inflammation, and other life-threatening diseases. My role involved in setting up Continuous Integration/Continuous Deployment pipelines and working with security and compliance teams.

Key Responsibilities and Achievements:

- Designed and automated infrastructure provisioning using **Terraform** and **Ansible**, reducing deployment time by **50%** and improving consistency across environments.
- Built and managed **CI/CD pipelines** using Jenkins and GitLab CI/CD, reducing deployment time and increasing code quality.
- Implemented **monitoring and logging solutions** using Prometheus, Grafana, and Splunk to enhance observability and proactive issue detection.
- Collaborated with development teams to integrate DevOps practices into the **software development lifecycle (SDLC)** for improved software delivery.
- Ensured **security integration within DevOps pipelines**, incorporating tools like SonarQube and Snyk for vulnerability scanning.
- Managed **containerized applications** using Docker and Kubernetes, enabling efficient microservices deployment.
- Automated repetitive operational tasks using **Python** and **Bash scripting**, improving team productivity by **30%**.
- Supported **cloud-native databases**, handling optimization, backups, and scaling strategies.
- Implemented **disaster recovery solutions** using Veeam and Zerto, ensuring high availability.
- Advocated for **DevSecOps practices**, ensuring security was integrated into the DevOps workflow.
- Enhanced cloud security posture by integrating **Cloud Security Posture Management (CSPM)** tools like Palo Alto Prisma Cloud and Check Point Cloud Guard, ensuring compliance with industry security standards and mitigating risks.
- Worked with **Big Data technologies** like Apache Hadoop, Spark, to facilitate large-scale data processing and analytics in the cloud, supporting Micron's data-driven decision-making.
