Automation Test Engineer / QA Automation Test Engineer /Selenium Automation/SDET

About Me QA Automation Engineer with 10+ years of experience, I specialize in automation, manual testing, functional testing, performance testing, and working with various platforms such as ERP, CRM, and ETL systems. My expertise spans across testing on cloud environments (AWS, Azure, GCP) and on-premise setups. I've worked on delivering comprehensive automated solutions, covering UI frontend, middle-tier, backend interfaces, and services.

I have developed automation test scripts using Selenium in Agile environments, and I am proficient in using frameworks such as WebDriver + Cucumber (Java), Appium, Python, Karate, and REST Assured. I am experienced with integrating automated tests into CI/CD pipelines using DevOps practices, enabling continuous testing and feedback loops for development teams.

Core Skills and Technologies:

- **Automation Tools Frameworks:** Selenium, Appium, Cucumber, Karate, REST Assured, TestNG, JUnit.
- **Programming Languages:** Java, Python, JavaScript.
- **Cloud Platforms:** AWS, Azure, GCP.
- **Testing:** API Testing, ETL Testing, Functional Testing, Regression Testing, Performance Testing.
- **DevOps Tools:** Jenkins, Git, Maven, Docker.
- **Test Management:** Jira, TestRail, Zephyr,
- **Agile Methodologies:** Scrum, Kanban, TDD, BDD.

Certification: Certified QA Automation Engineer

Experience Overview / Professional Summary

- **Automation Testing:** Developed and executed automated test scripts for web and mobile applications using Selenium, Appium, and Python. Designed, implemented, and maintained robust test automation frameworks for functional, regression, and performance testing.
- **CI/CD Integration:** Integrated test automation into CI/CD pipelines using Jenkins, allowing for continuous integration and seamless testing in DevOps environments.
- **Cloud Testing:** Performed testing across multiple cloud platforms, including AWS, Azure, and GCP, in addition to traditional on-premise applications, ensuring cross-environment compatibility and performance optimization.

API and ETL Testing: Led API testing using tools like Karate, REST Assured, and SoapUI, validated data integrity and transformations during ETL testing, and verified data quality across various data pipelines.

- **Cross-Functional Collaboration:** Worked closely with development teams to understand requirements and design test cases, ensuring comprehensive test coverage and prompt issue resolution.
- **Automation Framework Development:** Delivered scalable automation frameworks for multiple types of applications, and optimized test execution by creating reusable, maintainable code. Designed Page Object Models, integrated them with frameworks like Maven, TestNG, and Jenkins.
- **Defect Tracking and Reporting:** Interacted with developers during defect tracking meetings, analysed results of tests, and collaborated on issue resolution. Maintained detailed documentation of test plans, test cases, and defect reports.
- **Agile & SDLC:** Worked in Agile environments, following SDLC methodologies like Scrum and Waterfall. Contributed to continuous process improvements and helped develop testing strategies for both manual and automated testing.

Technical Skills:

Testing Tools	Selenium, Selenium IDE, Web driver IO, SOAP UI, Katalon, QTP, Rest Assured, Cypress, TOSCA, Playwright.
Language/ Script	Java, JavaScript, Shell Script, VBScript, C, C#, Python, Gherkin, Power Shell, React JS
Frameworks	TestNg, Robot, Keyword Driven, TDD, BDD, Page Object Model, PySpark, Ruby on Rails, Cucumber.
Firefox Add-ons	Fire Path, Firebug
Web development	HTML, XML, CSS
SOA Technologies	SOAP, REST, WSDL, Web Services, Microservices.
Tracking Tools	HP Quality Center, Bug Zilla, Visual Studio TFS, JIRA, Rally, HP ALM
Build/ CI Tools	Ant, Maven, Jenkins, Hudson, Git, Bitbucket, Bamboo, ADO
Databases Technologies	MS SQL Server, PostGre SQL, Oracle, MS Access TSQL, Mango DB.
ERP / CRM	Salesforce, SAP
Cloud	AWS, Azure, GCP, Big Data
Methodologies	Agile (Scrum), Waterfall, SDLC, STLC
MS Office tools	Outlook, Word, Excel, PowerPoint

Professional Experience:

Client: Cyrus One, Dallas, TX

Sep 2023 – Till Date

Role: Test Automation Specialist/ SDET

In this project the focus was on testing and validating scalable data pipelines and analytics frameworks to support CyrusOne's cloud-hosted solutions. It involves leveraging the Apache Hadoop technology stack on Microsoft Azure for efficient data management and advanced analytics. The objective is to ensure the quality, accuracy, and performance of data-driven systems that support CyrusOne's enterprise clients. This includes testing data pipelines, automating test cases for large-scale data integration, and validating configurations for hybrid cloud environments.

Responsibilities:

- Performed ETL testing & Data Validation on Snowflake tables.
- Automated Data Integrity Checks using Python & Snowflake Connector.
- Used SnowSQL CLI for querying large datasets in test cases.
- Verified data migration from AWS S3 / Azure Blob to Snowflake.
- Implemented CI/CD Pipeline in Azure DevOps for automation scripts executions for QA perspective.
- Designed BDD framework from scratch by writing **Gherkin feature** scenarios using **Cucumber**.
- Involved in the usage of BDD framework to Develop **Cucumber Step Definitions, Scenarios Features**
- Wrote Scenarios, Scenario outlines and Step Definitions using **Gherkin** in **Cucumber** for BDD.
- Writing and managing automation test-cases for REST API endpoints using **Postman tool**.
- Developed multiple **Selenium WebDriver** Java scripts for **Black-box Testing**.
- Implemented **SonarQube** as a process of **Code quality control** for all the applications and services and **integrated with AWS and on premise Jenkins**.
- Created **REST API** automation - validating - **response header, status, body, authentication, authorization and CSRF** using **RESTAssured, Java8, TestNG, Jackson**.
- Used **Gradle** for dependency management and build management. Used **Jenkins, Docker Containers** and **AWS** for continuous integration and testing.
- Involved in creating test cases for **Android** apps using **Appium** on **emulators** and **real devices**. Used **AndroidUIAutomator, TouchActions** and **Key Events**, Android Tools **ADB, Logcat** and **Emulator**.
- Used **BDD Framework** with **Cucumber, Java** and created **Feature file** with **Scenario Outline** files.
- Worked on **Performance** testing using **JMeter**, developed **Load scripts** for **REST API** performance testing, Generated **response times** with **throughputs** for different **load scenarios**.
- Working with **Web** and **Mobile** application automation in an agile **environment**, we used 2-week **sprints** , Worked as part of the framework design team and featured **scrum teams**.
- Worked on Building and implementing real-time streaming ETL pipeline using Kafka Streams API.
- Worked on Hive to implement Web Interfacing and stored the data in Hive tables.
- Wrote Scenarios, Scenario outlines and Step Definitions using **Gherkin** in **Cucumber** for BDD.
- Validated web services manually and through automation using SOAP UI.
- Writing and managing automation test-cases for REST API endpoints using **Postman tool**.
- Developed multiple **Selenium WebDriver** Java scripts for **Black-box Testing**.
- Involved in writing automated scripts for application using **Java scripts**.
- Deployed and managed automated test execution using **Kubernetes clusters**.
- Performed Data Centric testing to validate the data that is loaded into the data warehouse is correct as per the defined business rules. Continuous Integration(CI) process with Jenkins.

- Performed **Data Centric testing** / to **validate** the **data** that is loaded into the **data** warehouse is correct as per the defined business rules. **Continuous Integration (CI)** process with Jenkins.
- Working experience with Cloud Platforms like **AWS, Sauce Labs, Heroku.**
- **Web-services (SOAP & REST)** testing using automation tools such as **Rest Assured, SOAPUI, Postman.**
- Writing Test cases, Automating test cases, Reviews, Triage, Test Estimation, and Hot fix releases

Environment: Selenium, WebDriver, Cucumber (Java), Appium, Python, Karate, REST Assured, SOAPTest, SoapUI, Unix Shell, AWS, Azure, GCP, CI/CD, Jenkins, Docker, Kubernetes, Agile, Automation Testing, Manual Testing, Functional Testing, Performance Testing, Database Testing, ETL Testing, Cloud Testing, CRM Testing, ERP Testing, AI, ML, Data Science, Cyprus.

Client: Optum, Austin, TX

Aug 2020 – Jul 2023

Role: QA Automation Engineer

Project Description: Project focuses on ensuring the quality of applications running on cloud platforms, migrating from AWS to GCP. The scope includes validating and testing critical applications such as **Angular, Oracle ERP, and SAP** to ensure smooth operation and availability during infrastructure upgrades and patch releases. The QA team performs comprehensive smoke testing, validates change orders, and ensures application functionality post-upgrade. In addition to manual testing, legacy test cases are migrated into automation using **open-source technologies** to streamline the testing process.

Responsibilities:

- Developed and executed **manual and automated test cases** for critical applications (Angular, Oracle ERP, SAP) across cloud platforms (AWS to GCP).
- Conducted **smoke testing**, validating the initial health of applications post-upgrade or patch application.
- Migrated **legacy automation and manual test cases** into **automated scripts** using open-source tools, reducing testing time and improving efficiency.
- Responsible for **test case development**, execution, and reporting of testing progress and results.
- Ensured the availability and functionality of applications during **application/infrastructure upgrades** and **patch deployments**.
- Worked closely with the development team to identify and report defects, track issues, and follow-up for resolution.
- Participated in **release support**, ensuring all tests are completed, and applications are validated before deployment.
- Worked on Karate, testing the framework for API testing, UI testing, and performance testing to write tests in plain text, which can be easily read understood by both technical non-technical team members.
- Responsible for implementing Page Object Model (**POM**) using **Selenium** WebDriver.
- Involved in testing both SOAP and REST services using Rest Assured and tested both XML and JSON formats. Involved in writing SQL queries for backend/ETL testing.
- ETL Tester responsible for the understanding the business requirements, ETL and subsequently design ETL testing strategy using SQL scripts.
- Wrote automated scripts for Angular JS application using protractor and Java scripts.
- Used BDD framework with Cucumber, Java created feature files with scenario and scenario outline files.
- Perform backend validations in the **SQL** server database and deploy SQL database scripts in the lower environments. Maintenance of Automation Resources. Ready API tool to test SOAP REST API services.
- Automation using Visual Studio Coded UI C# .NET and creating XML data-driven unit tests.

- Tested many features in an agile environment using Python, Django, HTML5, CSS, JavaScript.
- Developed test automation, using BDD and ATDD approach (Cucumber, Gherkin, etc.)
- Working with **Web** and **Mobile** application automation in an agile **environment**, we used 2-week **sprints** and **CI/CD**, Worked as part of the framework design team and featured **scrum teams**.
- WebDriver for **UI automation**, **Appium** for **Android** automation, **JMeter** for performance automation, **RESTAssured** for **API automation**, and **JIRA** for **Story** and **Task Management**.
- Created framework with - **Page Object**, **UI Mapping**, **Data Driven**, **Dependency Injection**, **Dynamic Configuration**, **Wrapper around WebDriver** and other patterns.

Environment:

Testing Tools: Selenium, TestNG, JUnit, Cucumber, Appium **Cloud Platforms:** AWS, GCP

ERP Systems: Oracle ERP, SAP **Programming Languages:** Java, Python, JavaScript (Angular)

CI/CD Tools: Jenkins, Git, Maven

Automation Frameworks: Selenium WebDriver, Cucumber (BDD), REST Assured

Client: Affinius Capital, San Antonio, TX

May 2018 – Aug 2020

Role: Test Analyst/SDET

Project Description: This project involved the development of a dynamic **J2EE** application with both **UI** and **API** modules. The UI was built using **ReactJS**, **JavaScript**, and **HTML5/CSS3**, and deployed on the **AWS Cloud**. The project used **Agile (SCRUM)** methodology for the **Software Development Lifecycle (SDLC)**, with a focus on testing UI layout and functionality against the wireframes and current browser standards. The software systems' UI was migrated to current browser standards to ensure compliance with modern web technologies. The application included **financial modules** and **test automation** using **Selenium**, **Cucumber**, and **Rest Assured** for **UI** and **API testing**. The project aimed to ensure a seamless user experience and reliable API functionality with testing strategies, incorporating both manual and automation tests across multiple modules.

Responsibilities:

- Developed automated test scripts for both **UI** and **API** modules using **Selenium**, **Cucumber**, and **Rest Assured**.
- Migrated legacy manual test cases into **automated test scripts** using **open-source technologies** such as **Selenium WebDriver**, **Cucumber**, and **Protractor**.
- Used **Docker** to define, create, and deploy application services encapsulated in containers.
- Developed a **UI Automation Framework** using **Cucumber** and **Protractor** for Angular applications, written in **TypeScript**.
- Performed API testing using **Postman**, **SoapUI**, and **Swagger** to validate both **SOAP** and **RESTful** web services.
- Contributed to **Agile** methodologies, actively participating in **sprint planning**, **daily stand-ups**, and **retrospective meetings** to ensure timely delivery of test cases and defect tracking.
- Automated regression tests and integrated them into the **CI/CD pipeline** using **Jenkins** to ensure continuous testing and deployment.
- Executed **UI automation** using **Selenium WebDriver** with **TestNG** for **Java** applications, enhancing test scripts to validate **user interface** functionalities.
- Used **JavaScript** for client-side validation and executed automated **UI tests** using **Protractor** and **Selenium**.
- Developed **mobile automation scripts** using **Appium** for both **iOS** and **Android** platforms, including creating **simulators** for mobile testing.

- Collaborated with teams to validate **database queries** and deploy SQL scripts in lower environments for backend validation.
- Assisted in **production deployment**, post-deployment validation, and **Go-Live** support.
- Created Automated Web services testing processes using SoapUI NG Pro tool and Karate DSL framework.
- Worked on web services tools Rest API and understanding of HTTP code responses. Involved in testing REST services using Rest Assured and tested.
- Wrote and executed **manual and automated test cases** covering **functional, regression, negative testing**, and **usability**.
- Worked closely with business analysts, developers, and **DBAs** to define **test strategies** and prepare **test cases for functional, system integration, and regression testing**.
- Developed and executed automation scripts using **Selenium WebDriver, Cucumber, Java, and TestNG** to validate the **UI and API** of the web application.
- Configured **CI/CD pipelines** using **Jenkins**, integrating automated tests to ensure continuous deployment and testing.
- Worked with **SOAPUI** and **REST Assured** to perform **API testing** and validate services through **swagger** and other tools.
- Automated testing for **Angular 8** UI using **Jasmine** and **Karma**.
- Ensured **browser compatibility** and **cross-platform testing** using tools like **Jenkins, TestNG, and Maven** for streamlined test execution.
- Collaborated with cross-functional teams in **Agile sprints** to deliver high-quality software with robust testing coverage.

Environment: Selenium, Cucumber, Protractor, Appium, Jenkins, Docker, AWS, Postman, SOAP UI, Rest Assured, TestNG, Java, TypeScript, JavaScript, Angular, Maven, JIRA, Git, Jenkins, SQL, Oracle, AWS, Azure, Tableau.

Client: Dish Networks, Denver,CO

July 2016 – April 2018

Role: QA Analyst

Project Description: In this project I focused on implementing automated testing for various applications across different environments on cloud / on premise. The primary objectives included maintaining zero downtime during production releases using **Blue-Green deployments**, ensuring continuous integration, and testing applications in a **microservices architecture**. Testing was done across multiple platforms including **AWS, Azure, and Linux environments** with a focus on **Docker, Kubernetes**, and various **DevOps tools**. project involved automating both **frontend** and **backend** testing, ensuring seamless delivery, and enhancing productivity with the use of **Cypress, Selenium**, and other testing frameworks.

The project also included the migration of legacy automation and manual tests to modern frameworks, streamlining workflows, and reducing testing time. The aim was to improve the speed and quality of releases through continuous testing and integration within the **CI/CD pipeline**.

Responsibilities:

- Tested **Blue-Green deployments** to ensure zero downtime during **production releases** while maintaining **Git-Flow** standards.
- Used **Docker** and **Maven** to build **Docker images** for microservices and deployed them on **AWS Elastic Container Service**.
- Worked on **TFS/Azure DevOps** for **continuous integration (CI)** and automation of builds and deployments using **PowerShell**.

- Tested and orchestrated workloads using **Terraform, Chef, Puppet, Ansible**, and **ARM templates** in **Microsoft Azure**.
- Involved in the **migration testing** of Linux environments to **AWS Linux**, leveraging **auto-scaling** features and remediating Unix/Linux server patches.
- Created **Docker containers** from **Java JAR files** and deployed them in AWS, creating an enterprise-level **Docker repository**.
- Automated frontend testing using **Cypress** and **Selenium** for UI testing, increasing productivity and coverage.
- Architected an **automation framework** leveraging **Selenium, Java**, and **Jenkins** for **UI** and **API testing**.
- Created **Cucumber feature files** with over 3000 test cases to automate **MOGA** processes, reducing **APAC regression time**.
- Developed and executed **TestNG** and **JUnit** test scripts for regression and functional testing using **Selenium WebDriver**.
- Designed and implemented **Hybrid Automation Framework** with **Selenium WebDriver**, enhancing test execution efficiency.
- Conducted **functional testing, parallel testing**, and **cross-browser testing** on various browsers, ensuring compatibility across platforms.
- Involved in **API testing** using **SOAPUI** for **SOAP** and **RESTful** web services and validated the functionality with **Groovy scripting**.
- Performed **database validations** using **SQL** and **complex queries** to ensure data integrity and correctness.
- Automated **mobile app testing** for both **iOS** and **Android** platforms using **Appium**, including integrating **Appium with Sauce Labs** for cloud-based mobile test execution.
- Utilized **Jenkins** for continuous integration and deployment, ensuring **CI/CD** pipelines were automated and optimized for quick deployment.
- Worked closely with **developers** to track and resolve defects through **JIRA**, providing consistent feedback to ensure timely delivery.
- Developed and deployed scripts for **mobile native applications**, integrating testing with **Test Object** on cloud-based devices.

Environment: QuickTestPro, Selenium IDE, Selenium WebDriver, Apache POI, Auto IT, Java, Python, JMeter, LoadRunner, HTML, CSS, XML, XPath, Windows 10, SQL Server, Maven, Cypress, Web Services (SOAP & RESTFUL), Jenkins, GIT, Bit Bucket, Subversion, Linux, Visual Studio, JIRA, AWS, Azure, CI/CD.

Client: Orvito Inc., Hyderabad, India

Aug 2012 – July 2014

Role: Software Test Engineer

Project Description: In this project I was involved in testing the company's web-based by using **Selenium WebDriver**, which allows users to manage their smart home devices from anywhere. This platform served as the central hub where users could control everything from lighting and thermostats to security systems and energy management. It was designed to work across multiple browsers, providing a user-friendly interface with real-time control and feedback. My focus was on ensuring that the platform was stable, secure, and scalable, providing users with a flawless experience regardless of their environment.

Also, I was responsible for managing the testing lifecycle, from test planning and strategy creation to execution and defect management, and to make sure the platform worked smoothly across multiple devices, browsers, and environments. Testing is used to cover from device connectivity, real-time data synchronization, and security features to performance underload and usability across different user journeys.

Responsibilities:

- Focused on testing the web portal through which users could manage their smart home devices, it also involved performing functional testing to ensure features such as device setup, control, and monitoring were working as expected.
- Validated UI/UX to ensure the platform was intuitive and responsive across different browsers (Chrome, Firefox, Safari, Edge).
- Conducted **cross-browser testing** to make sure it as consistent behavior and appearance of the web application, to check that all devices and functionalities worked smoothly across the most common browsers and their versions.
- Performed integration testing of the web platform with the various IoT devices. This included verifying device pairing, status updates, and real-time communication between the platform and devices.
- Ensured that user commands like turning lights on/off, adjusting thermostat settings were reflected immediately on the devices without delays.
- Utilized tools like **JMeter** to simulate high traffic and conduct **stress testing**, ensuring the platform could handle multiple simultaneous users, especially when controlling multiple devices at once.
- Measured load times, response times, and system stability, making sure the platform could scale seamlessly as the number of connected devices or users grew.
- Conducted vulnerability assessments to identify and fix any potential security flaws that could expose the system to breaches.
- As issues were found, I used **Jira** to log, track, and prioritize defects, ensuring timely resolution by collaborating closely with developers and product managers.
- Helped troubleshoot and provided detailed steps for bug reproduction, which sped up the fixed process.
- Participated in **UAT** sessions, working directly with stakeholders to confirm that the platform met end-user expectations and business requirements before going live.

Environment: Selenium WebDriver, JMeter, TestRail, Jira, Bugzilla, Git, GitHub, Jenkins, Bamboo, JMeter, LoadRunner, Slack, Confluence.

Education:

- Masters in University of North Texas **May 2016**
- Bachelors in Vignana Bharathi Institute of Technology, JNTUH, HYD **May 2012**
