
PROFESSIONAL SUMMARY:

- Over 11 years of expertise in network infrastructure and security, including the design, deployment, and support of network systems, as well as installation and analysis of LAN/WAN protocols, routing, switching, and troubleshooting complex networks.
- Proficient in configuring and troubleshooting Cisco routers (ISR 2900, ISR 881, ISR 871, ISR 877) and Juniper firewalls (SRX 320, SRX 345), as well as Cisco switches (Catalyst 3550, Catalyst 3560).
- Extensive hands-on experience with Cisco Nexus switches (2248T, 2224T, 5548P, 5596T, 6000, 7010, 7018, 7710), including implementing VDC, VPC, VXLAN, and EVPN.
- Extensive experience in Network Switching, including the configuration and troubleshooting of Cisco Catalyst and Nexus switches. This includes working with technologies like VDC, VPC, VLAN, EtherChannel, and spanning tree protocols (STP) across access, distribution, and core layers to ensure optimal network performance.
- Designed and implemented Cisco ACI solutions in data centers, utilizing containers and cloud orchestration tools.
- Implemented and supported SDWAN solutions, including Cisco Viptela, Versa, Fortinet, Meraki, SilverPeak, and Talari, managing overlays, updates, and outages.
- Experienced in configuring and troubleshooting access, distribution, and core layer switches, including Cisco Catalyst 2960, 3750, 4507, 4010, 6506, and 6509 models.
- Deployed wireless network infrastructure and performed wireless surveys. Advanced knowledge of TCP/IP suite, IPAM, and routing protocols (OSPF, EIGRP, ISIS, BGP), including configuring LACP and OSPF on Arista 7250qx64 switches.
- Implemented and managed Network Access Control (NAC) solutions to ensure secure network access based on compliance with security policies.
- Troubleshot and optimized NAC systems to enhance security posture and prevent unauthorized access to critical network resources.
- Implemented and troubleshot switch technologies such as STP, VTP, 802.1q, VLAN, EtherChannel, and port security.
- Created security zones and policies on Juniper SRX firewalls. Configured RIP, OSPF, and static routing on Juniper routers and implemented security policies like NAT, PAT, and access lists.
- Experienced in deploying Frame Relay, GRE tunnels, remote access VPNs, and site-to-site VPNs. Configured proxy servers and managed RADIUS and TACACS+ authentication.
- Expertise in Network Routing with protocols such as BGP, OSPF, EIGRP, RIP, and ISIS. I have configured complex routing setups, including LACP and OSPF on Arista switches, to improve traffic routing efficiency and ensure network resiliency in large-scale environments.
- Designed, deployed, and troubleshot F5 load balancers (BIGIP Series 5050V, 10000V, 8900, 6900, 3900), including configuring F5 objects, components, and various modules like LTM, GTM, ASM, and APM.
- As a CCNA certified professional, I have demonstrated proficiency in configuring, administering, and troubleshooting Cisco routers (ISR series) and switches (Catalyst series), ensuring robust solutions in LAN/WAN environments and adherence to networking best practices.
- Configured and maintained F5 environments, including creating new VIPs/WIPs and iRules, and migrating applications from Cisco ACE/CSM to F5 LTM.
- Proficient in using network management tools such as SNMP, SolarWinds, NTP, and Syslog. Skilled in MS Visio for documentation and configuring VoIP phones using Asterisk.
- Skilled in deploying and supporting SDWAN solutions, including Cisco Viptela, Versa, Fortinet, Meraki, SilverPeak, and Talari. My experience includes managing overlays, troubleshooting outages, performing updates, and optimizing WAN performance across various remote locations.
- Experienced in configuring Palo Alto firewalls, including IPSEC and SSL VPNs, zone-based firewall, security rules, and analyzing firewall logs using Panorama.

CERTIFICATIONS:

- Cisco Certified Network Associate (CCNA).
- CCNP – Certified Cisco Network Professional.

TECHNICAL SKILLS:

Cisco Switches	Nexus 7K, 5K, 2K & 1K,(Network Switching) Cisco routers (7200, 3800, 3600, 2800, 2600, 2500, 1800 series) & Cisco Catalyst switches (3650,6500, 4900, 3750, 2960 3500, 2900 ,2911,
Cisco Routers	Cisco 2600, 2900, 3600, 3900, 7200 and 7600 series
Infrastructure services	DHCP, DNS, SMTP, FTP, TFTP
LAN technologies	Ethernet, Fast Ethernet, Gigabit Ethernet, & 10 Gigabit Ethernet, Port Channel, VLANs, VTP, STP, RSTP, 802.1Q, SVI
Routing Protocols	Network Routing,RIP, IGRP, EIGRP, OSPF, BGP, HSRP, VRRP, & GLBP.
WAN technologies	Frame Relay, ATM, MPLS, leased lines & exposure to PPP, T1 /T3 & SONET, supporting largescale WAN deployments and SDWAN
Firewall Technologies	Cisco ASA 5580 series, PANOS 2020, Juniper SRX, Palo Alto, Checkpoint.Juniper Switches/Routers
Network Security	NAT/PAT, Ingress & Egress Firewall Design, VPN Configuration, Internet Content Filtering, Load Balancing, IDS/IPS, SSL, IPSEC, IKE, Static, Dynamic, Reflexive ACL, and authentication AAA (TACACS+ & RADIUS)
Network Management	SNMP & knowledge on Cisco Works, Ethereal.
Platforms	Cisco IOS (11.x, 12.x), LINUX, Nexus OS, Windows XP, providing a strong platform foundation for CCNA and Network Routing expertise.
Documentation	MS Office, MS Visio
LoadBalancer Technologies	F5 BIGIP LTM.

Client: HCL America Inc.

Role: Network Engineer

Responsibilities:

- Designed, implemented, and maintained robust network solutions to meet organizational needs while ensuring optimal performance and uptime.
- Configured and managed Cisco routers, switches (Catalyst and Nexus series), and wireless controllers, including IOS/NXOS upgrades for compliance and performance optimization.
- Deployed and managed Cisco SD-WAN solutions (Viptela and Meraki), optimizing traffic flows to enhance application performance and reduce latency.
- Hands-on experience with vManage, including template creation, policy design, and device onboarding for scalable SD-WAN deployments.
- Designed and implemented maintenance and migration procedures by creating and executing Method of Procedure (MOP) documents to ensure controlled, low-risk network changes.
- Actively monitored and managed incidents via tools like ServiceNow and SolarWinds, responding to and resolving high-priority tickets, minimizing business impact.
- Configured and administered firewalls such as Palo Alto, Cisco ASA/Firepower, and Fortinet, including firewall policies, rules, and VPN configurations.
- Conducted regular network audits, vulnerability scans, and remediation to maintain secure perimeter defenses.
- Designed, deployed, and troubleshoot LAN/WAN infrastructure, including VLANs, BGP, OSPF, EIGRP, and MPLS for high availability and redundancy.
- Performed physical installation (racking and stacking) of network equipment, including routers, switches, firewalls, and servers, ensuring proper cabling and labeling.
- Conducted routine inspections and maintenance of racked equipment to ensure operational and

Duration: Oct 2024 – Present

environmental stability.

- Monitored and optimized network performance across LAN/WAN infrastructure, ensuring seamless connectivity and minimal downtime.
- Provided expert-level troubleshooting and support for complex network issues, including packet capture analysis, configuration audits, and escalation handling.
- Participated in on-call rotations and incident bridges, providing technical expertise and root cause analysis during critical outages or performance degradation.

Environment: Cisco Routers & Switches (Catalyst, Nexus), Cisco SD-WAN (Viptela, Meraki), Cisco vManage, Palo Alto Firewalls, Cisco ASA/Firepower, Fortinet Firewalls, MPLS, BGP, OSPF, EIGRP, VLAN, VPN, SolarWinds, ServiceNow, Wireshark, Cisco IOS/NX-OS, Linux, Putty, SecureCRT, MS Visio, SNMP, NetFlow, TACACS+, RADIUS

Client: East West Bank Kony Inc. (Temenos) Palo Alto, CA

Aug 2022 – Sep 2024

Role: Sr Network Engineer

Responsibilities:

- Utilized Cisco ACI Fabric based on Cisco Nexus 9000 series switches and Cisco Application Virtual Switch (AVS) for modern Network Switching solutions, enhancing network flexibility and scalability.
- Assessed and integrated wireless networks with Cisco Meraki, ensuring compatibility with existing infrastructure and future scalability, while optimizing both Network Switching and Network Routing across diverse environments.
- Mitigated security vulnerabilities through proactive measures and executed corresponding software upgrades to maintain robust network security, ensuring compliance with Network Routing best practices.
- Configured and managed patching solutions using Ansible, efficiently implementing changes across Cisco networks, enhancing SDWAN deployments and reducing downtime during upgrades.
- Supported Cisco ACI infrastructure and resolved complex issues related to Local Traffic Manager (LTM) and Access Policy Manager (APM) configurations, ensuring seamless Network Switching and performance.
- Configured TCP/IP IPv4 and IPv6 addresses to ensure comprehensive Layer 3 testing, Network Routing readiness, and integration with SDWAN technologies for optimized WAN traffic management.
- Demonstrated expertise in F5 networks, including Global Load Balancing Service Broker (GLSB), and deep F5 administration, optimizing both Network Switching and Network Routing performance for missioncritical applications.
- Implemented Checkpoint VPN rules over Cisco ASA VPN to enable secure, applicationlayer traffic inspection, ensuring compliance with CCNA standards for secure Network Routing.
- Architected and executed migration plans for Access Control Lists (ACLs) from Cisco ASA to Palo Alto Network firewalls, enhancing security posture while ensuring compatibility with existing SDWAN infrastructure.
- Migrated enterprise firewalls from Cisco ASA to Palo Alto Networks, utilizing Panoramamanged firewalls (5000, 3000, and 200 series) to establish a dynamic, modular, and applicationaware security model, aligned with Network Switching and Network Routing protocols.
- Integrated onpremises networks with AWS, establishing a secure VPN tunnel between Cisco ASA firewall and AWS VPC, and configuring AWS Workspaces with onpremises Active Directory for enhanced SDWAN connectivity.
- Configured network hardware across Cisco (IOS XR, IOS XE, NXOS), Juniper, Palo Alto, and F5 to ensure optimized Network Switching and Network Routing performance across various networkrelated projects.
- Managed extensive switch and router configurations across various networkrelated projects, ensuring seamless operations and alignment with CCNA standards for Network Routing and Switching.
- Configured the Infoblox system to meet client needs, leveraging indepth knowledge of DNS, DHCP, and IP Address Management (IPAM) solutions for optimized Network Switching operations.
- Provided support for Cisco ASA firewall systems, ensuring secure and efficient Network Routing and Switching operations.
- Deployed and managed NetScalers globally, facilitating SSL VPN, Global Server Load Balancing (GLSB), and Load Balancing, ensuring high availability across SDWAN infrastructure.
- Resolved security issues related to Cisco ASA and Palo Alto firewalls, maintaining Network Routing integrity and security.
- Implemented DHCP, DNS, and IPAM configurations to manage IP address allocation and resolution effectively, supporting Network Switching and Routing protocols.
- Engineered the deployment of Zscaler, transitioning from proof of concept to full integration within the

corporate SDWAN network.

- Utilized SolarWinds for comprehensive monitoring of the corporate network, ensuring optimal Network Switching performance and uptime.
- I employed ServiceNow to manage incidents, changes, and problem management tickets, maintaining efficient workflow and resolution times for all Network Switching and Network Routing issues.

Environment: F5 LTM, Checkpoint, OSPF, BGP, VLAN, HSRP, LAN, WAN, SDWAN, IPv4, ASA Firewall, DNS, DHCP, IPAM, BGP, EIGRP, OSPF, Data Center Migration.

Client: Cigna, Remote, US

Feb 2021 – Jul 2022

Role: Network Engineer

Responsibilities:

- Installing, configuring, and troubleshooting LTE SAE Gateways, Juniper Firewalls, and Cisco Routers, with a focus on network switching and routing.
- Implementing and managing Network Access Control (NAC) solutions to ensure devices meet security policies before accessing the network, while adhering to CCNA level network security standards.
- Troubleshooting hardware/software platforms/applications and EPC network core distribution and access layers, including network routing protocols.
- Testing Layer 2 and Layer 3 protocols such as BGP, OSPF, and MPLS using commercially available test tools, ensuring optimal network switching performance.
- Configuring and monitoring NAC systems to secure network access for wired and wireless devices, utilizing knowledge from CCNA training.
- Performing comprehensive testing for all phases, including Unit, Integration, IOT, Feature, Performance, and Services, with a focus on ensuring efficient network switching and routing.
- Configuring, implementing, and troubleshooting in a multivendor Service Provider Environment, with extensive experience in switching and routing technologies.
- Monitoring and troubleshooting Layer 2 and Layer 3 protocols like OSPF, BGP, MPLS, VRRP, and VPLS, ensuring seamless network routing.
- Migrating existing IPSEC VPN tunnels from PreShared key to Certificate Authority for scaling purposes, incorporating advanced routing techniques.
- Maintaining and analyzing the F5 network for potential upgrades, optimizing switching and routing performance.
- Configuring and monitoring Cisco ASA 5500 for use in large service provider networks, applying CCNA level firewall and network routing principles.
- Working with Juniper NetScreen 520M Firewall and Palo Alto network firewalls, including advanced routing configurations.
- Involved in the integration and configuration of Cisco and Openet LTE nodes, focusing on network routing across mobile networks.
- Troubleshooting NAC related issues to maintain secure network environments and prevent unauthorized access, aligning with CCNA best practices.
- Troubleshooting wireless data core networks, architecture, protocols, interfaces, and wireless operator's end-to-end network, ensuring efficient switching and routing.
- Deploying/configuring LWAPs, WLC, WDS, and 802.11 wireless devices, with a focus on network switching for wireless environments.
- Designing and troubleshooting LTE, UMTS, and GPRS networks, including network routing configurations.
- Implementing Aruba Wireless LAN for 802.11n infrastructure across corporate networks, with emphasis on switching best practices.
- Configuring and troubleshooting routing protocols such as MPBGP, OSPF, LDP, EIGRP, RIP, and BGP v4, ensuring reliable network routing.
- Configuring network access servers for AAA security using Juniper IC Infranet Controllers MAGSM360, MAG4610, applying CCNA level principles.
- Involved in the design of the New Nexus POD Environment, optimizing network switching.
- Designing advanced networking solutions, including Quality of Service (QoS), Virtual Routing and Forwarding (VRF), and route redistribution, focusing on network routing.
- Implementing Site-to-Site VPNs over the internet utilizing 3DES, AES, and AES256 with PIX Firewalls, with a focus on CCNA level security and network routing.
- Configuring VIPs, pools, iRules, and profiles on F5 LTM 10.x and 11.x versions, optimizing network

switching.

- Managing LTE call flows, core system interfaces, and protocols such as S1MME, S1U, S6a, S11, S5/S8, GTPv2, and CCR/CCI, ensuring efficient routing across LTE networks.
- Performing substantial lab testing validation prior to implementing Nexus 7K, 5K, and 2K connecting to blade servers, focusing on switching.
- Working on IXIA and Landslide and troubleshooting using IRIS, Netscout, nGenius, and Wireshark, ensuring CCNAlevel proficiency in switching and routing.

Environment: LTE SAE Gateways, Juniper Firewalls, Cisco Routers, EPC Network Core, F5 Networks, Cisco ASA 5500, Juniper NetScreen 520M Firewall, Palo Alto Network Firewall, Cisco and Openet LTE Nodes, LWAPs, WLC WDS, 802.11 Wireless Devices, Aruba Wireless LAN, MPBGP, OSPF, LDP, EIGRP, RIP, BGP v4, Juniper IC Infranet Controllers MAGSM360 and MAG4610, Nexus POD Environment, QoS, VRF, PIX Firewalls, F5 LTM 10.x and 11.x, S1MME, S1U, S6a, S11, S5/S8, GTPv2, CCR/CCI, Nexus 7K, 5K, 2K, IXIA, Landslide, IRIS, Netscout, nGenius, Wireshark.

Client: Commerce Bank, Richardson, Texas

Dec 2018 Jan 2021

Role: Network Engineer

Responsibilities:

- Designed and implemented Cisco ACI in data centers, establishing a strategy that integrates containers and cloud orchestration tools for end users and developers.
- Configured and deployed Cisco ASA firewalls, NextGen Firepower Threat Defense (FTD), Firepower Chassis Manager (FCM), Firepower Management Centre (FMC), and Cisco Security Manager.
- Experienced in designing and managing SDN and hybrid networks, including the creation of an SDN overlay network with traffic manipulation capabilities via the RYU controller and REST APIs.
- Deployed and configured Nexus 7K, 5K, and 2K models, with the 2K in FEX mode and the Nexus 7K pair featuring VDC and VPC for the distribution, core, and access layers.
- Deployed and configured Nexus 9K for VXLAN connectivity between two data centers.
- Set up F5 LTM, GTM, APM, and ASM modules from scratch, including LTM for external application load balancing in the DMZ, APM for authentication, and ASM for application security policies integrated with AD and Imprivata.
- Configured a NetScaler load balancer for Citrixbased applications, such as Citrix VDI and Citrix remote access VPN gateway.
- Managed Checkpoint (R80) Firewall security rules and objects, including configuration, deletion, and consolidation as needed.
- Migrated Checkpoint 41K firewalls to Palo Alto 5250 and installed Palo Alto VM firewalls in Azure Cloud.
- Conducted a proof of concept (POC) on VeloCloud, Viptela, and Meraki SDWAN solutions, evaluating the options as part of a team.
- Configured and maintained VPCs using 7010/7018 and 5548 devices, along with VDCs and VRFs on 7010/7018 switches.
- Configured OSPF, BGP, DHCP profiles, HSRP, IPv6, and Bundle Ethernet on a redundant pair of ASR 9K routers.
- Deployed VLANs, assigned ports and IPs, and planned network configurations on ASR 9K, Nexus 7K, 5K, and related downstream devices.
- Implemented virtual firewalls (VSX) and clustering across various Check Point environments.
- Configured EBGp load balancing to maintain stable BGP peering interfaces.
- Troubleshot latency and throughput issues on MPLS and dedicated internet access circuits.
- Deployed and configured Cisco Meraki SDWAN at 30 remote sites worldwide.
- Implemented a Cisco Application Centric Infrastructure (ACI) lab in one of the data centers using a spineleaf architecture with Cisco Nexus 9000 series switches.
- Utilized ExtraHop for network anomaly detection, data security monitoring in databases and storage, and bottleneck identification.
- Implemented Cisco ISE for endpoint authentication using certificatebased authentication, device administration, and wired 802.1X.
- Monitored, optimized, and supported data, wireless, and voice network infrastructure.
- Provided proactive support for daily wireless network operations within the organization.
- Assisted in wireless network design by conducting site surveys.

Environment: Cisco ASA 5525, 5585, 5580; Cisco Routers (3900, ASR 1001/1002, 9000); Juniper MX960, MX480; switches (3750/3550); Nexus 9K, 7K, 6K; BGP; IPv6; OSPF; EIGRP; SSLVPN; Site-to-Site VPN; MPLS; EtherChannels; Cisco Catalyst Switches; JUNOS Space; NSM (Network and Security Manager); Pulse Secure; Panorama; Ansible; JSA; Network Monitoring Tools.

Client: Charles Schwab, TX

Feb 2017 – Nov 2018

Role: Network Engineer

Responsibilities:

- Designed, implemented, and administered an IPv4 enterprise network infrastructure using Juniper routers, including Juniper MX80, MX480, and MX960.
- Participated in the design and execution of data center migration projects and developed strategies for the expansion of MPLS VPN networks.
- Managed Cisco routers, switches, HP switches, and F5 load balancers, leveraging SNMP MIBs for effective fault detection and isolation.
- Configured, troubleshooted, and managed Cisco ISR 4Ks (4451, 4431, 4331), 3800 series routers, and Catalyst 4500, 3800, and 6500 series switches for optimized LAN/WAN connectivity.
- Configured and managed Nexus 7K switches utilizing technologies like VPC and VDCs, with IOS software upgrades performed through ISSU for seamless performance.
- Set up L3/L2 port channels using LACP and PAgP, providing redundancy and high availability through the implementation of HSRP and GLBP.
- Enhanced application response times and network resource utilization using Riverbed Appliances on classified networks.
- Provided remote configuration and troubleshooting support for Cisco routers, switches, Fortinet devices, Meraki appliances, and Aruba access points.
- Configured Juniper SSG140 and Check Point firewalls to bolster network security measures.
- Implemented and configured profiles and iRules for F5 BigIP LTM6400 load balancers, ensuring efficient load distribution.
- Conducted configuration, commissioning, and upgrades of MPLS circuits across various branch offices while disabling unused ports and assigning them to an unused VLAN.
- Implemented and recommended outofband management and monitoring systems, utilizing SolarWinds for both primary and disaster recovery sites.
- Assisted in configuring and deploying site-to-site VPNs, enhancing secure communication across the network.

Environment: Cisco 2600, 2800, and 3600 routers; F5 Load balancers; Palo Alto firewalls 3060, 5060, 7050; Cisco ASA 5520 Firewall; Juniper routers; Nexus 7K switches; Aruba access points; Riverbed Appliances; SolarWinds.

Client: Patni Computers, Mumbai, India

Aug 2013 – Dec 2016

Role: Network Engineer

Responsibilities:

- Created network diagrams for employees using Microsoft Visio. Prepared client machines for users with operating systems, software, antivirus, required utilities, and mailing clients.
- Primarily responsible for designing and maintaining the budget for the entire network.
- Performed daily maintenance, troubleshooting, configuration, and installation of all network components.
- Configured CISCO Routers (3600, 4000 Series) and 3550, 4500 series switches.
- Planned, implemented, and managed TCP/IP networks with subnets.
- Enabled SNMP traps for Cacti Monitoring to monitor traffic and check the regular health of servers and network devices.
- Implemented Virtual LANs across routers and switches.
- Performed switching-related tasks, including implementing VLANs, VTP, and configuring ISL trunk on the FastEthernet channel between switches.
- Implemented and configured LAN protocols: Ethernet, VLANs, VTP, and STP. Configured IP routing protocols: OSPF, EIGRP, and RIPv2.
- Experienced in configuring site-to-site and remote site VPNs, NAT/PAT policies.
- Conducted IOS upgrades on catalyst series switches like 2900, 3560, and 3750.
- Troubleshot TCP/IP problems and connectivity issues in multiprotocol Ethernet environments.
- Implemented trunking protocols like 802.1q on 3750 switches.
- Configured ACLs to provide accessibility and restrict unauthorized users.

- Maintained STP, RSTP, and PVST+ for the catalyst switches I worked on.
- Configured and maintained RIP, OSPF, and routing protocols on 2600 and 3600 series Cisco routers.
- Maintained and troubleshooted connectivity problems using Ping and Traceroute.
- Assisted in racking and stacking.
- Worked with Remedy Ticketing tool to maintain and track logs/monitor.
- Monitored the servers and networks.
- Designed and implemented IP addressing, subnetting, route summarization, and route distributions.

Environment: LAN, WAN, Subnetting, VLAN, VTP, VPN, NAT, OSPF, BGP, EIGRP, STP, RSTP, PVST+, EtherChannel, 802.1Q, PAT
