

Mark Truong Senior Full Stack Engineer

San Diego, CA | marktruongdev@gmail.com | <https://www.linkedin.com/in/mark-truong76>

SUMMARY

Senior Full Stack Developer with 10+ years of experience in building scalable web and mobile applications. Proficient in both frontend and backend, as well as cloud, database management, and DevOps practices. Skilled in agile development environments, collaborating across teams to deliver high-quality solutions from prototype to production.

SKILLS

Frontend: HTML5, CSS3, JavaScript, TypeScript, React, Redux, Angular, Vue.js, jQuery, Next.js, Tailwind CSS, MUI

Backend: Node.js, Express.js, Nest.js, Python, Django, FastAPI, Flask, PHP, Laravel, C#, ASP.NET, Ruby on Rails, Go, Java, Spring boot, MySQL, PostgreSQL, MongoDB, Restful API, GraphQL, WebSockets, Apache, Apache Kafka

Others: AWS, Azur, Git, GitHub, GitLab, Docker, Kubernetes, Jenkins, Jira, Trello, TDD, Agile/Scrum, AI/ ML

PROFESSIONAL EXPERIENCE

Kaizen Apps

Senior Software Engineer

September 2020 – Present

- Designed and implemented scalable backends using Python frameworks like Django, Flask, and FastAPI, delivering secure data processing and optimized performance for telehealth, veterinary, and rental platforms.
- Built and maintained backend services with Node.js frameworks such as Express.js and Nest.js, leveraging Kafka for event-driven microservices architecture.
- Developed robust, high-performance solutions tailored to platform needs using PHP, Ruby on Rails, and Go.
- Built responsive, flexible UI pages with React 18, Redux, HTML5, CSS3, JavaScript, and Tailwind CSS, incorporating reusable TypeScript components and services for REST API integration.
- Enhanced application performance and SEO using Next.js and Incremental Static Regeneration (ISR), achieving improved Time to First Byte (TTFB) and higher Lighthouse SEO scores.
- Designed RESTful APIs and GraphQL with WebSocket integration, enabling real-time data querying and updates for healthcare providers and administrators.
- Established rigorous testing processes with Jest, Mocha, and Cypress, adopting Test-Driven Development (TDD) to ensure high-quality and maintainable code.
- Automated CI/CD pipelines with GitHub Actions, Jenkins, and Docker, ensuring seamless build, testing, and deployment workflows.
- Deployed and managed containerized applications with Kubernetes, improving scalability, resource efficiency, and operational reliability.
- Integrated AI/ML models into telehealth platforms, providing predictive analytics for patient outcomes and personalized recommendations using real-time data.
- Modernized legacy systems to enhance performance and user experience while maintaining compliance with industry regulations.
- Directed cross-functional teams, mentoring junior developers, and aligning technical solutions with business objectives to deliver complex projects on schedule.
- Maintained code integrity and streamlined collaboration in multi-developer environments using Git and GitHub.

Kaizen Apps

AWS Engineer

April 2020 – September 2020

- Integrated AWS services into full-stack solutions by leveraging AWS Lambda for automated workflows, S3 for secure media storage, and RDS for scalable database management, enhancing system performance and scalability across projects.
- Optimized cloud infrastructure and deployment workflows using AWS CloudFormation and CI/CD pipelines, ensuring seamless scalability, cost-effectiveness, and regulatory compliance for healthcare and telehealth platforms.

Presidium Health

Senior Full Stack Engineer

September 2019 – March 2020

- Revamped and scaled a telemedicine platform into distinct web and mobile applications for patients, providers, partners, and administrators using C#, ASP.NET Core, React, and React Native, delivering tailored user experiences.

- Built responsive and intuitive interfaces with React and React Native, optimizing usability for both desktop and mobile platforms.
- Enhanced backend performance with optimized ASP.NET Web APIs, supporting real-time features like text and video chat for telehealth consultations.
- Secured applications with robust authentication using ASP.NET Identity, JWT, and role-based access control, ensuring HIPAA compliance.
- Developed a real-time scheduling system, enabling providers to manage appointments, track availability, and sync calendars seamlessly across devices.
- Created interactive dashboards with React and SQL Server, providing administrators with insights into key metrics and operational performance.
- Automated testing and deployment with Azure DevOps CI/CD pipelines, ensuring efficient and reliable releases.
- Added offline functionality to mobile apps with React Native, enabling critical features to work seamlessly in low-connectivity environments.
- Optimized application performance using React's lazy loading, efficient state management with Redux, and real-time updates with SignalR.
- Collaborated with cross-functional teams to deliver scalable, user-centric solutions that addressed business needs.
- Integrated third-party services such as payment gateways, SMS notifications, and Azure cloud storage, enhancing platform capabilities and user experience.

Presidium Health

Database Administrator

March 2019 – August 2019

- Designed and optimized PostgreSQL databases for high-traffic applications, ensuring data integrity, performance, and secure storage for sensitive information, including healthcare and telehealth systems.
- Implemented ETL processes to migrate and transform data into PostgreSQL environments, enabling seamless integration with backend systems and improving data accessibility for real-time analytics.

MLMProtec

Senior Full Stack Developer

September 2018 – March 2019

- Migrated legacy systems to cloud infrastructure, transitioning WordPress data to PostgreSQL on AWS and improving data integrity, backup processes, and media storage using AWS S3.
- Collaborated with cross-functional teams, including product managers, designers, and engineers, to define technical requirements, ensure scalability, and deliver high-quality features on time.
- Utilized Agile methodologies to deliver features incrementally, improving team collaboration and enhancing product quality through continuous testing and deployment (CI/CD) workflows.
- Implemented real-time chat using WebSocket, managing global state with react-redux and redux-saga.
- Customized react-google-maps to showcase real estate locations in web applications.

MLMProtec

Full Stack Developer

September 2015 – August 2018

- Designed and implemented responsive, user-centric interfaces using HTML, CSS, JavaScript, and React.
- Integrated jQuery for dynamic UI components and optimized user interactions across multiple devices.
- Developed scalable backend services using Node.js, Express.js, and TypeScript to handle business logic and data processing, ensuring secure and efficient data flow.
- Managed and optimized relational and NoSQL databases like PostgreSQL and MongoDB, ensuring efficient data storage, retrieval, and security across applications.
- Integrated third-party APIs and services for enhanced functionality, such as payment gateways, geolocation services, and social media logins.
- Worked closely with designers to implement design systems and ensure a consistent and intuitive user experience, using Tailwind CSS and Material UI for component design.
- Employed D3.js for gene variation visualizations, incorporating transitions, animations, tooltips, legends, axes, scales, and brushes.

EDUCATION

UCSD (Warren College)

Bachelor of Science in Computer Science

2012 - 2015
