PROFESSIONAL SUMMARY

DevOps Engineer with 6 years of experience in designing, provisioning, and managing highly available, scalable cloud infrastructure in AWS and developing containerization solutions. Proficient in designing robust CI/CD pipelines with GitHub Actions and Jenkins, creating Terraform modules from scratch, and managing EKS clusters and apps. Skilled in problem-solving, effective communication, and collaborating across teams to deliver high-quality, efficient, and reliable solutions using agile methodologies. Adaptable in fast-paced environments and committed to continuous improvement and innovation in cloud infrastructure.

SKILLS

AWS	GitHub Actions	Bash	EFK Stack	Git	Linux
Kubernetes	ArgoCD	DataDog	Docker	Prometheus	Grafana
Terraform	EKS	Ansible	Python	Helm	Jenkins

CERTIFICATIONS

CKAD: Certified Kubernetes Application Developer	2027
AWS: Certified Solution Architect Associate	2027

WORK EXPERIENCE

DevOps Engineer II Render San Francisco, CA	Nov 2021 - Present
- Designed and implemented Terraform module for provisioning AWS EKS clusters integrated with external Postgres RDS. Effectively managing IAM roles, VPC endpoints, and Secrets while ensuring a scalable and resilient infrastructure setup. - Created custom Helm charts for EFK stack, incorporating TLS, secure credentials synchronization, VPN access, anomaly alerts, and S3 for backups, all configured and deployed with a GitHub Actions CI/CD pipeline. - Developed AWS SSO solution automating creation of IAM roles, groups, and policies, allowing for dynamic provisioning and deprovisioning of access policies. - Implemented advanced containerization strategies using Docker and Kubernetes for legacy EC2-hosted apps, optimized autoscaling groups, and improved overall resource management, resulting in a monthly cost reduction of \$7,000+. - Optimized deployment processes across multiple environments (development, staging, production) by utilizing CI/CD pipelines with ArgoCD and Helm, resulting in 37.2% reduction in Kubernetes applications deployment time.	
DevOps Engineer Render San Francisco, CA	Sep 2020 - Nov 2021
- Enhanced cluster performance monitoring using DataDog, Prometheus and Grafana, including setting up custom dashboards and alerts for proactive issue detection and monitoring. - Implemented centralized External-DNS service across multiple EKS clusters, various hosted zones, and multiple AWS accounts. - Migrated and optimized over 15 pipelines from Jenkins to GitHub Actions implementing automated workflows that increased deployment speed and enhanced overall pipelines efficiency.	
Junior DevOps Engineer M&T Bank Boston, MA	Oct 2018 - Sep 2020
- Implemented configuration management on Linux VMs using Ansible Playbooks to ensure consistency, compliance, and reliability across various infrastructure environments. - Developed comprehensive YAML and JSON templates using CloudFormation as a part of a cloud migration strategy to AWS. - Created and optimized CI/CD pipelines in Jenkins to automate the application deployment process and infrastructure provisioning. - Maintained and troubleshooted existing Golang, NodeJS, and Python based backend applications, ensuring their smooth operation and minimal downtime on APIs.
