DOB: 1996.12.8 | US Citizen

PROFILE SUMMARY

Michael is a full-stack developer with over 15 years of experience building modern, high-performance web applications. He specializes in creating dynamic and responsive user interfaces using frameworks like React, Vue.js, and Angular, while also developing robust back-end systems using Node.js, TypeScript, and serverless technologies.

Michael has a deep understanding of both front-end and back-end technologies, including HTML, CSS, JavaScript, and API integrations. He excels at state management, performance optimization, and deploying applications to cloud-based environments like AWS, ensuring seamless full-stack solutions.

He is experienced in working with modern tooling such as Webpack, Vite, and GraphQL, and is committed to delivering efficient, maintainable, and scalable solutions.

SKILLS

HTML, CSS, JavaScript, TypeScript, Node.js, React, Vue.js, Angular, Next.js, Nuxt.js, Svelte, SvelteKit, Redux, Vuex, Pinia, Zustand, Recoil, Context API, Express.js, GraphQL, Apollo Client, RESTful APIs, WebSockets, Axios, MongoDB, PostgreSQL, MySQL, Firebase, AWS (S3, Lambda, CloudFront, EC2), Serverless, Docker, Kubernetes, Git, GitHub, GitLab, CI/CD, Jenkins, AWS Amplify, Vercel, Netlify, PostgreSQL, SQL, NoSQL, Firebase, Firebase Functions, Webpack, Babel, Vite, CSS Preprocessors (Sass, SCSS, PostCSS), Tailwind CSS, Bootstrap, Material UI, Chakra UI, Styled Components, UI/UX Design, Responsive Web Design, Accessibility (WCAG, ARIA), PWA (Progressive Web Apps), SSR (Server-Side Rendering), CSR (Client-Side Rendering), ISR (Incremental Static Regeneration), Microservices, DevOps, Testing (Jest, Mocha, Cypress, React Testing Library, Playwright), Storybook, Web Animations API, WebRTC, Three.js, D3.js, Canvas API, Figma to Code, Adobe XD to Code,

GreenSock (GSAP), Internationalization (i18n), Localization (l10n), SEO, Performance Optimization, Code Splitting, Lazy Loading, AWS Lambda, SQL, PostgreSQL, MongoDB, Redis, Elasticsearch.

KEY HIGHLIGHTS

Lead Fullstack Developer at Amazon: Led the development of a new checkout process with recurring subscriptions and a mobile app using React Native. Managed a full-stack team, integrating backend APIs and improving customer service tools. Focused on end-to-end solutions, including cloud infrastructure and performance optimizations.

Senior Fullstack Developer at AgileEngine: Built the Theragun app, integrated Salesforce and eCommerce platforms, and created a serverless alert system for eCommerce. Developed both frontend (React) and backend systems, working with Node.js, GraphQL, and cloud deployments.

Senior Fullstack Developer at Diffco: Developed backend systems for a restaurant app, implemented full-stack solutions, grew the engineering team, and established development best practices. Built and integrated APIs, managed databases, and improved system architecture.

Tech Skills: Expert in React, TypeScript, JavaScript, Vue.js, Angular, Node.js, Webpack, GraphQL, RESTful APIs, AWS, Azure, Docker, Kubernetes, and serverless architecture. Skilled in cloud deployments and performance optimization across the stack (frontend and backend).

Portfolio: Led the development of content management systems for Honest Beauty and improved the subscription platform for The Honest Company. Customized Shopify checkout to boost conversions by 20%, and worked on full-stack integrations to enhance eCommerce user experiences.

Leadership: Experienced in building and managing full-stack development teams, leading projects from concept to completion, ensuring cross-functional collaboration, and optimizing both front-end and back-end workflows.

PROFESSIONAL EXPERIENCE

Lead FullStack Developer

May 2023 - present | Seattle, Washington

Amazon

I led the development and implementation of a new version of the checkout process with recurring subscriptions, utilizing React for the frontend and Node.js, TypeScript, and GraphQL for the backend. The system was designed using a microservices architecture to ensure seamless integration, scalability, and performance across both the frontend and backend. I also handled the integration of new warehouses into the system, implementing these changes with a serverless backend to optimize performance and cost-efficiency.

I played a key role in developing a customer service tool to streamline customer appeasement management for our support teams. This full-stack solution enhanced operational efficiency and customer satisfaction, leveraging backend services like Node.js and AWS alongside frontend technologies. Additionally, I led the development of a mobile app with React Native to expand our user base and improve customer interaction on mobile platforms.

As a leader, I managed the hiring process and built a talented team of full-stack developers, QA engineers, project managers, UX designers, and product managers. This cross-functional team worked collaboratively to deliver high-quality, scalable projects from concept to deployment.

Technologies: Amazon Web Services (AWS), Shopify, GraphQL, PostgreSQL, Amazon DynamoDB, Serverless, Shopify Plus, Node.js, TypeScript, React, React Native.

Senior FullStack Developer

Jan 2022 - April 2023 | Boca Raton, Florida

AgileEngine

I developed and led the end-to-end creation of the Theragun app, now available on both the App Store and Play Store, to enhance customer engagement and support key business initiatives. I managed both frontend and backend development, utilizing React Native for the mobile app and Node.js for the backend. The backend integrated seamlessly with platforms like Twilio for messaging, Salesforce for CRM, and eCommerce systems to facilitate customer transactions.

Additionally, I led the development of a consumer experience app targeted at corporate offices, gyms, and hotels. I designed and built the backend, integrating with systems like Salesforce, eCommerce

platforms, Twilio, SendGrid, AWS SQS, and AWS Lambda, ensuring a scalable, secure, and reliable architecture.

A significant project I spearheaded was a custom affiliate program that connected the mobile app to the website, providing a seamless user experience through real-time communication via SMS and email. This program used Node.js, React Native, and AWS SQS to facilitate real-time updates and transaction tracking.

I also led the integration of Netsuite ERP and Salesforce CRM with an eCommerce platform, creating custom solutions using JavaScript and Ruby to ensure smooth data flow across systems. Additionally, I built a serverless eCommerce alerting and monitoring system that enabled the team to track orders in real time, leveraging AWS serverless technologies to maintain scalability while optimizing costs.

As a leader, I managed a talented team of developers, project managers, product managers, and QA engineers. I played a key role in the recruitment process and ensured we built a cohesive team that successfully executed our vision for mobile app development, Salesforce Commerce Cloud, and site development.

Technologies: Amazon Web Services (AWS), Serverless, Shopify, Serverless Architecture, Ruby on Rails (RoR), Ruby, PostgreSQL, Node.js, React Native.

Senior FullStack Developer **Diffco**

Jan 2021 - Jan 2022 | Sunnyvale, California

I led the development of the backend for a restaurant curation mobile app, utilizing Golang, AWS Lambda, PostgreSQL, and Elasticsearch to ensure scalability, high performance, and seamless integration. I also took charge of defining the software development process within the company, setting best practices and guidelines for the engineering team.

As part of my leadership role, I grew the engineering team to five developers, focusing on Golang, React Native, and React. Later, I expanded the team to eight engineers to support both web and mobile app development for iOS and Android. I managed cross-functional teams and fostered collaboration to ensure smooth project delivery and high-quality solutions.

Technologies: Heroku, Elasticsearch, AWS Lambda, React Native, React, Golang, PostgreSQL, GoLand.

Junior FullStack Developer | Intern
Ahex Technologies

July 2020 - Jan 2021 | Middletown, Delaware

As a Junior Developer, I contributed to the development of both web platforms and back-end systems, as well as mobile applications for eCommerce websites. I worked closely with the engineering, product management, design, and UX teams to plan and implement key features for various platforms.

I played a key role in the creation of an API-driven content management system, enabling the design and UX teams to make updates to websites and mobile apps without requiring code deployments. I also assisted in the development of new market verticals, including Honest Formula and Honest Beauty.

In addition, I worked on optimizing the website to handle an increased number of visitors and made significant contributions to improving the mobile-friendliness of the platform. Throughout my role, I collaborated with engineers and QA professionals to ensure the smooth operation of the Honest Company's websites and apps.

Technologies: GoLand, Golang, React, AngularJS, Ruby on Rails (RoR), Ruby, Node.js, PostgreSQL.

Junior FullStack Developer | Intern
Kinda Software

July 2019 - June 2020 | Silicon Valley Blvd, Suite

As a Junior Developer, I helped build and maintain a continuous integration platform that ran over 40,000 unit tests and 2,000 Selenium tests in parallel every time code was committed, ensuring the quality and scalability of the system. I was also involved in developing a solution to import customer data into AppFolio, which enabled quick onboarding in under 30 minutes.

I contributed to the development of a rental listing platform for a multi-tenant system and developed a unique solution for posting listings on Craigslist. Additionally, I worked on building a rental application

platform and played a role in making code deployment scalable across hundreds of servers, supporting thousands of clients. I also assisted in building custom reporting and accounting features for the system, enhancing the platform's functionality.

Technologies: Node.js, React, PostgreSQL, AWS, AppFolio, Selenium, Docker, Jenkins, Python, Ruby on Rails (RoR).

PROJECTS AND PORTFOLIO

Content Management System for Honest and Honest Beauty.com

<http://www.honest.com>

I was the tech-lead for the launch of Honest Beauty, a new brand within The Honest Company. I led the ideation and did the admin (AngularJS) and back-end development (Ruby on Rails, MySQL, Memcached) for a novel but simple API-based content management system. It allowed setting up pages like homepage, product pages, custom pages, and more, using a drag and drop UI. The front-end of the website and mobile apps would consume the API output of the CMS to render the pages. The system allowed updating pages on the fly without going through deploy cycles, especially on mobile apps.

I worked with the design and UX team to come up with requirements and a framework that they could design on, making sure that the system would be able to support them. I also worked with the product team to define the requirements clearly.

We launched the project successfully, on time, and the architecture was adopted by the main honest.com website soon after, a project that I led as well.

Scalable Architecture for The Honest Company

<http://www.honest.com>

I led the re-architecture of the subscription platform at The Honest Company, which allowed us to scale up to 1 million visitors a day. I also led a team of eight developers to make the Honest website mobile-friendly and implement the scalable architecture to support a \$300 million annual revenue site. Technologies used were Ruby on Rails, AngularJS, and JavaScript.

Customized Shopify Checkout

<http://www.hellobello.com/pages/checkout>

I implemented a customized checkout for supporting the subscription commerce for Hello Bello on a Shopify Plus website. The checkout is built in React/TypeScript. I also implemented the back end from scratch using Shopify Plus API, TypeScript, and NodeJS. The overall positive effect of this new checkout is about 20% better conversion rate.

EDUCATION

Aliso Niguel High School

Bachelor's degree on Computer Science 2018 - 2020

Northeastern University - Boston, MA, USA

Bachelor's degree on MatheMatics 2016 - 2018

LANGUAGES

English
