Senior Java Full Stack Developer

SUMMARY / OBJECTIVE

- Having 11+ years of experience in all parts of Software Development Life Cycle (**SDLC**) including requirement analysis, design specification, code development, code integration, testing and deployment of client-server applications using Object Oriented Analysis Design (**OOAD**) and methodologies.
- Expertise in Design, Development of applications using middleware/back-end technologies like **Java** and **J2EE** technologies using Core **Java**, **Servlets**, **JDBC**, **Spring** modules, implementation of Model-View-Controller (MVC) using **Spring**, **Spring boot**, **Struts** frameworks and ORM tools like **Hibernate** etc.
- Experience in **AWS** platform and its features including IAM, Cloud Watch, Cloud Trail, Cloud Formation AWS Configuration, Autoscaling, Cloud Front, S3, Lambda, API GATEWAY.
- Implemented a server less architecture using API Gateway, **Lambda**, and Dynamo DB and deployed AWS Lambda code from Amazon S3 buckets.
- Created a Lambda Deployment function and configured it to receive events from your S3 bucket.
- Extensive experience in developing **Microservices** using **Spring Boot**, **Spring Cloud** using Netflix OSS and following domain driven design.
- Experience in using build/deploy tools such as Jenkins, **Docker** for Continuous Integration & Deployment for **Microservices**.
- Extensive experience in Java/J2EE programming - Servlets, JSP, JSTL, JMS.
- Experience in using different servers like Tomcat, WebLogic, JBOSS and WebSphere application servers.
- Good knowledge and experience working with latest versions JDK 7 and JDK 8.
- Proficient in developing Single Page Application using **Angular**, **ReactJS** and **VueJS**
- Experience in using the Web Services such as SOAP (JAX-WS) and REST(JAX-RS) and implemented using Spring technologies.
- Strong experience with Version Control like GitHub, SVN and Perforce.

- Expertise in database modelling, administration and development using PL/SQL in Oracle (8i, 9i and 10g,12c), MYSQL and SQL Server environments.
- Versatile team player with good communication, analytical and inter-personal skills.

SKILLS

- Java, J2EE, SQL, C++, TypeScript, JavaScript, Python
- Spring, Spring Boot, DAO in Spring Framework, Node, Struts, Hibernate
- React, Angular, Blazor, .Net Web/Windows Forms
- AWS, GCP, AZURE, Apache Kafka
- MySQL, MongoDB, Oracle, Hibernate, Cassandra, MS SQL, SSIS, LINQ, PowerBI
- Docker, CI/CD, Kubernetes, Docker Swarm, Azure DevOps, Git, SVN, VSS, TFS, Gitlab
- Windows, Linux, Unix & Mac
- Jira, OAuth, Postman, SOAP
- Jest, Cypress, Jasmine, Enzyme, Mocha, Chai
- Software Development and Architecture
- Webpack, Parcel, Rollup
- Performance Optimization
- Troubleshooting and Quality Control
- Agile Processes
- Scrum methodology
- Cross-Functional Collaboration
- Front-End and Back-End development
- Strong Analytical skills
- Good Communication and Interpersonal skills
- Creative thinking skills
- Decision-making skills
- Problem-solving skills

WORK EXPERIENCE

Tata Consultancy Services, Philadelphia, PA

Apr 2022 – Present

Senior Full Stack Java Engineer

- Utilized advanced Java 11 features, including lambda expressions, streams, and functional interfaces, to create efficient, scalable solutions.
- Developed robust applications using **Spring** technologies such as **Spring MVC**, **Spring Boot**, **Spring IOC**, and Dependency Injection, ensuring high performance and reliability.
- Implemented **microservices** architecture and RESTful web services, significantly improving client-server communication and overall system scalability.
- Conducted thorough testing of web service responses using Postman, ensuring API reliability and functionality.
- Built dynamic Single Page Applications (SPAs) using **Angular 14**, TypeScript, Angular Material, and **RxJS**, with a focus on creating reusable components and efficient routing systems.
- Produced and consumed RESTful Web Services using **Spring**, facilitating seamless data exchange in JSON format for enterprise-level applications.
- Designed and implemented Data Transfer Object (DTO) layers, creating structured POJOs to standardize JSON responses.

- Applied Test-Driven Development (TDD) practices, writing unit tests with JUnit and Mockito to ensure comprehensive test coverage and robust code quality.
- Integrated **Spring JPA** with **SQL Server**, crafting complex native SQL queries to manage intricate data handling requirements.
- Leveraged **AWS** services like EC2 and Elastic Beanstalk for efficient environment setup, and used the AWS SDK to interact with S3 for secure and scalable document storage.

Technologies: Core Java, Java 11, J2EE, Spring, Rest, JPA, Spring MVC, Spring Boot, Bootstrap, JavaScript, ReactJS, Angular, RxJs, TypeScript, Oracle, PL/SQL, Eclipse, Jenkins, Maven, GIT, Tomcat, STS.JSON, Unix Script, Microservices, Spring Cloud, Docker

With Pulp, Denver, CO

May 2019 – Jan 2022

Senior Full Stack Developer

- Involved in SDLC activities, including requirements gathering, analysis, design, development, and testing using AGILE/Scrum methodology.
- Designed application modules, base classes, and utility classes using **Core Java**, with a focus on efficiency and reusability.
- Analyzed **Maven** dependency management to properly annotate dependencies in **Spring Boot** applications for **Microservices**.
- Executed server migration from physical infrastructure to the cloud using **AWS** services, enhancing scalability and flexibility.
- Developed Java APIs for **Amazon Lambda** to manage AWS services, and utilized AWS-CLI to control Lambda functions.
- Monitored AWS services using Amazon CloudWatch and analyzed application logs with Amazon CloudWatch Logs.
- Utilized JDBC API framework for Oracle database connections, executing PL/SQL queries for transaction management.
- Worked with **Amazon DynamoDB** as a NoSQL database for storing data in a reporting application.
- Managed user credentials and created custom IAM policies using Amazon IAM for secure access control.
- Leveraged **Amazon S3** for storing and retrieving media files like images, ensuring efficient object storage.
- Built packages and managed continuous integration using Maven and Jenkins build tools.
- Designed and developed JUnit test cases to ensure robust and error-free application development.
- Tested web services using POSTMAN, ensuring accurate request and response handling.
- Developed backend logic using Core Java, including Collections and multi-threading, and built frontend components with **React/NextJS**.

Technologies: Java, Java Spring, DynamoDB, Amazon API Gateway, AWS Lambda, S3 Bucket, AWS IAM, React, TypeScript, NextJS, JavaScript, SASS, Agile, Eclipse, JUnit, Maven, Perforce, PL/SQL.

Akvelon Inc

Oct 2013 – Mar 2019

Full Stack Java Developer

- Involved in SDLC requirements gathering, analysis, design, development, and testing of application, developed using AGILE/Scrum methodology.

- Developed applications using **Angular 4**, TypeScript, and Angular-CLI, focusing on generating components, services, and implementing complex forms with Reactive Forms and Form Builder.
- Transformed design mock-ups into functional Single Page Applications and cross-browser compatible HTML/CSS layouts, following the FSA Design System for 508 compliant code.
- Created wireframes using **Balsamiq** and collaborated with team members and business users for requirements capture and analysis.
- Utilized SQL and PL/SQL to create queries, stored procedures, and triggers, ensuring data manipulation, access control, and integrity.
- Developed and consumed REST Web Services using **Spring**, testing them with REST Client and POSTMAN.
- Managed dependencies with **Maven** and handled continuous integration and deployment with Jenkins, automating builds in a JBoss application server.
- Implemented the MVC architecture using **Spring**, including **Spring Core**, DAO, ORM, and Web MVC.
- Developed backend test cases using JUnit and Mockito, and conducted frontend testing with Karma and Jasmine for Angular components.
- Employed Log4J for logging and tracing application messages.
- Used JIRA for tracking user stories and defects throughout the development process.
- Followed Test Driven Development (TDD) and Scrum practices, ensuring high-quality code and iterative progress.
- Involved in SDLC requirements gathering, analysis, design, development, and testing using AGILE/Scrum methodology.
- Designed and developed applications with a focus on adhering to agile principles and continuous collaboration.

Technologies: Java 1.8, Spring MVC, Spring Core, RESTful Web Services, Hibernate, HTML5, CSS3, JavaScript, JMS, JBoss, Agile, Eclipse, JUnit, Maven, SQL Server 2014, TypeScript, Angular 4, Angular CLI, SASS, PL/SQL.

EDUCATION

University of South Carolina
Bachelor of Science in Computer Science

2008 - 2012
