Summary

Michael is a passionate front-end developer with 10 years of experience, who started programming in grade school. After getting his bachelor's degree in computer science, he worked for two large international companies—developing mostly web applications. He has extensive knowledge of front-end JavaScript and browser APIs as well as significant experience with popular frameworks and libraries like React, Next and Redux.

SKILLS

Javascript, HTML5/CSS3, SCSS, Canvas, Tailwind, JQuery, ES6, ES7, JSX, Babel, Webpack, React, Next, Gatsby, Redux, Saga, Thunk, MobX, Formik, Hook, Context, Refs, Code Splitting, React Bootstrap, Material UI, Semantic UI, AntD, StoryBook, Styled component, Typescript, GraphQL, RestfulAPI, Vue.js, Vuex, Pinia, Nuxt, Angular, Node.js PHP, MySQL, MongoDB, PostgreSQL
React-Native

EXPERIENCE

Plante Moran, Southfield, MI - Senior Consultant (React Developer)

Jan 2021 - Present

- Built Engagement Workflow with Next, React, TypeScript from scratch to evaluate and gain approval for new clients, jobs and related objects.
- Upgraded New Engagement Workflow project with React and Next from Angular 12 based application
- Implemented visual testing and snapshots in Storybook, reducing the risk of bugs and ensuring that UI components rendered correctly across various states.
- Managed state globally with customized hooks, Redux-thunk, slice, Redux-toolkit, Context API.
- Maintained code quality with 100% test coverage by using Jest for unit testing.
- Reviewed other vendors' PR daily with a 2 weeks sprint agile development process.
- Maintenance work on admin dashboard, metadata, writing a bunch of test cases (unit/integration/e2e).

- Architected and deployed scalable web applications using AWS ECS (Elastic Container Service), resulting in a 30% reduction in deployment time and improved resource utilization.
- Leveraged AWS S3 for efficient storage and management of large datasets, including setting up lifecycle policies to automate data archiving and cost management.
- Enhanced security by configuring IAM roles and policies, ensuring granular access control to AWS resources, and reducing the risk of unauthorized access.
- Improved performance with Next v13, TypeScript Redux, React Hooks, HOC, skilled Object handling.
- Developed highly functional code by using both classical and functional ways.
- Deployed internal react-Native mobile application, developed react-native modules from scratch.
- Implemented Typescript for type checking, improving code efficiency, readability, and maintainability, ensuring robustness and reducing the likelihood of runtime errors.
- Responsible for design and development of various components such as tab bars, map view, image picker, date picker, push notifications, sign-in/out features, profile management and navigation using React-Native.
- Creating technical specifications and Unit Test case scenarios for different functionalities.
- Organized and prioritized work to complete assignments in a timely, efficient manner.

Advinow Medical, Scottsdale, AZ - Senior Full Stack Developer

April 2017 - Dec 2020

- Worked on Ecommerce and Medical Remote Service Project.
- React + Firebase for Medical Remote Service Website
- Angular 11 for main Web pages development and implemented micro-frontend technology to the project.
- Implemented serverless architectures using AWS Lambda for event-driven processing, reducing operational overhead and cutting costs by 20% on data processing tasks.
- Optimized data storage and retrieval by designing and implementing a DynamoDB schema that supported high-volume transactions with minimal latency, leading to a 25% performance improvement in database queries.
- Automated infrastructure provisioning using AWS CloudFormation, which streamlined the setup of IAM roles, S3 buckets, and DynamoDB tables, reducing manual configuration errors by 50%.
- Led training sessions for team members on Storybook usage and best practices, fostering a culture of quality in UI development and improving overall team productivity.
- Developed the main website using Next.js, incorporating Next UI, Chakra UI, CSS, React.js, and React Hooks
- Wrote and optimized SQL queries for data retrieval, reporting, and analysis, ensuring high performance and accuracy in database operations.
- Implemented automation solutions using PowerShell scripting to streamline routine administrative tasks, significantly reducing error rates and processing time.
- Conducted data migrations and transformations using SQL and PowerShell, ensuring data integrity and minimal downtime during transitions.
- Developed cross-platform mobile applications with React Native, optimizing performance and usability for both mobile and web platforms.

- Ensure the applications run smoothly on both iOS and Android devices.
- Translated 100+ pages of Figma design into reusable React components using Ant Design, HTML5 and SCSS
- Connect the website with remote Medical Machines using Firebase services.
- Interacting with Product manager and users to do requirement gathering.
- Developed application using Java/J2EE technologies - Spring Boot, PCF and Microsoft Azure
- Implemented SEO best practices, optimizing meta tags and content for improved organic search traffic.
- Do brainstorming on requirements, sprint planning, create user stories, etc.
- Worked on a greenfield project namely Market Needs Assessment end to end, including ETLs, Restful APIs using Node Js, storing data on Postgres, developing front end using ReactJs, and deploying on AWS Fargate as a Docker image.
- Implemented strong backend logic with Nest Js and typescript, 100% testing coverages
- Spearheaded frontend development in ReactJS, specializing in crafting dynamic and reusable components.
- Implemented business logic with Node and worked on other smart solutions.
- Optimized performance of the website using React-query, reduced the bundle size by 50% by implementing pagination, lazy loading, and tree-shaking
- Ensured that the workflow engine continued to scale and perform well regardless of the load on the platform.

Netgate, Austin, TX - *Front-end Developer*

Jan 2015 - March 2017

- Collaborated with founders engineers, data scientists to troubleshoot UX problems and improve user engagement.
- Develop the UI component architecture for the developer framework using React, Vue, Typescript, HTML5, CSS3, and Bootstrap.
- Developed and maintained PowerShell and LDAP scripts for automating complex tasks, reducing manual effort by 50% and improving efficiency in system administration.
- Created React.js components and fixed bugs.
- Complete stories on time using Agile and Kanban agile methodologies
- Used HTTP services for asynchronous validations for the input fields of the forms with the data existing in the database.
- Experienced in front-end development using React using Web API, and Database Design.
- Experienced in some backend development using Python.
- Experience in analyzing and monitoring performance bottlenecks and key metrics in order to optimize software and system performance. Responsible for delivering the entire application end to end.
- Develop responsive design for web, mobile web, and tablets.
- Develop new features for the product such as a new layout, A/B Testing, Search.
- Integrate the front end with homegrown CMS solutions for publishers Page performance analysis and optimization.
- Deploying a test environment using Jenkins CI/CD and GitHub.

- Build great online seamless user experiences using modern frameworks and libraries.
- Debug complex production issues using Chrome debugger tools
- Test components using Jest and Enzyme to make sure they are production ready and Peer Review the code and flow.

EDUCATION

University of Central Missouri, (Warrensburg, MO) 2014

Bachelor's Degree in Computer Science
