

MOHAMMED HUSSAIN

+1 (646) 546-4031 | hussainm280@gmail.com | [LinkedIn](#)

Summary:

- 4+ years of experience spanning DevOps, Linux System Administration, and Cloud Engineering, supporting mission-critical applications across AWS, Azure, and GCP.
- Proven expertise in Linux systems (RHEL, Rocky, SUSE, Solaris)—installing, patching, tuning, and automating infrastructure using Kickstart, LVM, and system hardening practices.
- Architected and managed cloud infrastructure using AWS services such as EC2, S3, RDS, IAM, VPC, Route53, and CloudWatch, ensuring scalability and high availability.
- Automated infrastructure provisioning and configuration using Terraform, CloudFormation, and Ansible, following Infrastructure-as-Code (IaC) principles.
- Designed and implemented robust CI/CD pipelines with Jenkins, Harness, GitLab CI, and Ansible, enabling zero-downtime deployments and rapid feedback loops.
- Hands-on with configuration management tools such as Puppet, Chef, and Ansible—developed custom modules and roles for server configuration and compliance.
- Containerized applications using Docker and deployed them to Kubernetes clusters (AKS, EKS), using Helm charts and YAML for scalable microservice orchestration.
- Experience with middleware including WebSphere, JBoss, and Tomcat—managing application deployments, clustering, and SSL configurations.
- Developed and maintained automation scripts using Bash, Python, and Perl for backups, patching, monitoring, and deployment tasks.
- Integrated and optimized Apache Kafka for real-time data streaming and messaging, including stress testing and monitoring with ELK and Grafana.
- Administered Git, migrated from SVN, and integrated repositories with build tools like Maven, Ant, and Gradle, promoting code reuse and traceability.
- Proficient in monitoring and observability using Dynatrace, Splunk, Datadog, Zabbix, and Nagios, with actionable dashboards and alerting for production systems.
- Performed vulnerability scans with Nessus and implemented security policies across cloud and on-prem environments, including RBAC, MFA, and SSH hardening.
- Supported hybrid IT environments with Windows-Linux integration, including user management, Active Directory, LDAP integration, and remote administration via SSH/RDP.
- Actively contributed to Agile/Scrum practices, sprint planning, and cross-functional collaboration—ensuring timely delivery of secure, scalable software infrastructure.
- Expert in release and deployment automation across QA, UAT, and Production environments with WebLogic, JBoss, and Tomcat.

TECHNICAL SKILLS:

Operating System	Red Hat Linux (5/6/7/8/9), Ubuntu (12.04 - 22.04), CentOS, Windows Server (2008-2022), OEL, SUSE Linux
Cloud Platforms	AWS (EC2, S3, IAM, Lambda, RDS, CloudFront, ECS), GCP, Azure, VMware, Oracle Cloud
Infrastructure as Code (IaC)	Terraform, AWS CloudFormation, Ansible, Packer, Chef
CI/CD Pipelines	Jenkins, GitLab CI/CD, GitHub Actions, Azure DevOps, Bitbucket Pipelines, Code Pipeline, Circle CI
Configuration Management	Ansible, Chef, Puppet, Salt Stack, Docker Compose

Containerization & Orchestration	Docker, Kubernetes, OpenShift, Docker Swarm, Helm
Database Management	MySQL, PostgreSQL, MongoDB, Cassandra, DynamoDB, Redis, Aurora, Oracle
Monitoring & Logging	Prometheus, Grafana, Splunk, AWS CloudWatch, ELK Stack (Elasticsearch, Logstash, Kibana), Nagios, Datadog
Scripting & Automation	Python, Shell/Bash, PowerShell, Ruby, Go, JSON, YAML, Groovy
Version Control	Git, GitHub, Bitbucket, GitLab, SVN
Release & Environment Management	Jenkins, Docker, Terraform, Helm, Argo CD, TeamCity, Nexus, Artifactory
Cloud Security	AWS IAM, Azure AD, Vault, Secrets Manager, Key Management Service (KMS), LDAP, RBAC policies
Project Management	JIRA, Confluence, Trello, Scrum, Kanban, Agile
Web & Application Servers	Apache, NGINX, Tomcat, WebLogic, Microsoft IIS
Service Management	ITIL v4, Incident & Change Management, BMC Remedy, ServiceNow
Backup & Recovery	AWS Backup, RDS Snapshot, EBS Snapshot, Veeam, VMware vSphere, Azure Backup
Networking	DNS, DHCP, TCP/IP, SSH, SSL/TLS, Load Balancing, VPN, HTTP(S), IPsec

Experience

Walmart, Bentonville, AR

Sep 2023 – Present

DevOps Engineer

Responsibilities:

- Automated infrastructure provisioning and configuration management using Puppet, including custom module development for OS and 3rd party application configs.
- Designed and managed CI/CD pipelines with Jenkins, automating application build, test, and deployment processes for hybrid Linux/Windows workloads.
- Developed and maintained Terraform scripts and CloudFormation templates for infrastructure automation across AWS and Azure.
- Deployed and managed Docker containers and Kubernetes clusters, leveraging Helm charts and YAML for scalable, containerized application deployments.
- Integrated Kafka with Flume and Spark for real-time log aggregation and processing in high-throughput environments.
- Leveraged AWS services (EC2, S3, ELB, CloudWatch, Route53) and Azure App Services to build, monitor, and scale cloud-native applications.
- Automated complex deployments using Ansible, integrating dynamic inventories, Git repositories, and Ansible Tower for enterprise configuration control.
- Built deployment workflows in Harness to translate stakeholder requirements into automated and auditable delivery pipelines.
- Migrated legacy infrastructure to microservices architecture, using Docker and Kubernetes to improve scalability and deployment speed.

- Monitored system performance and health using ELK stack, Grafana, Splunk, and CloudWatch, implementing proactive alerting and dashboarding.
- Managed ServiceNow change management processes alongside system changes and automated remediation scripts.
- Administered and upgraded Puppet Master and Agents, troubleshooting issues, customizing forge modules, and maintaining secure connectivity.
- Designed and maintained auto-scaling strategies based on Kafka-driven event triggers, improving backend service reliability.
- Integrated Apache, WebSphere, JBoss, and MySQL components into full-stack deployments across Linux environments.
- Supported hybrid environments by administering both Linux and Windows servers, ensuring cross-platform integration and uptime.
- Wrote and maintained Bash and Python scripts for automating operational tasks, log parsing, and service monitoring.
- Conducted HA and failover testing for multi-region AWS deployments, validating DR strategies and SLA adherence.

Bank of America, Chicago, IL

May 2022 – Sep 2023

Cloud Engineer/Linux Engineer

Responsibilities:

- Designed and enforced IAM policies, roles, and MFA in AWS to manage fine-grained access controls across multi-account setups.
- Automated AWS Lambda functions using Python (Boto3) for tasks like access key rotation, log archiving, and EC2 state changes.
- Created and managed Terraform scripts for deploying secure, scalable AWS infrastructure components — VPCs, subnets, ELBs, and EC2 instances.
- Monitored and optimized usage of S3, Glacier, Azure Blob Storage, and implemented lifecycle policies for archival and cost efficiency.
- Migrated EC2 snapshots and Redshift clusters across regions and accounts, ensuring high availability and data integrity.
- Managed AWS Organizations to standardize governance, apply Service Control Policies (SCPs), and produce monthly cost breakdowns for clients.
- Implemented RBAC and SSO in Azure Active Directory, integrating identity management with cloud services for secure access provisioning.
- Deployed and configured Linux VMs via Red Hat Satellite Server and integrated them with Active Directory for centralized authentication in hybrid cloud environments
- Installed, maintained, and upgraded Red Hat Enterprise Linux (RHEL 5/6) systems in production, resolving kernel, package, and system performance issues.
- Automated OS provisioning using Kickstart, and configured LVM for dynamic disk management and partition resizing.
- Performed RPM/YUM-based patching and upgrades, including in-place RHEL version upgrades, ensuring minimal downtime.
- Developed Bash, Python, and Korn shell scripts to automate system checks, backups, log rotation, and service monitoring tasks.
- Configured and troubleshooted Apache, Tomcat, Samba, and WebLogic servers; handled SSL certificate generation and renewal.

- Diagnosed system bottlenecks using tools like vmstat, iostat, nfsstat, and provided tuning recommendations for CPU, memory, and I/O performance.
- Utilized Nagios and Zabbix to monitor system health, detect outages, and automate incident alerts across physical and virtual infrastructure.
- Performed Linux system hardening using firewalld/iptables and conducted vulnerability scans via Nessus, addressing TCP/UDP threats and audit findings.
- Automated Weekly releases with Maven scripting for Compiling Java Code, Debugging and Placing builds into Maven Repository. Used Maven dependency management system to deploy snapshot and release artifacts to Nexus to share artifacts across projects.
- Involved in setting up of Jenkins for Automating Builds and Deployments through integration of Git into Jenkins to automate the code check-out thus providing an automation solution.
- Implemented using Splunk for log analyzing and improving the performance of servers. Wrote several custom Splunk queries for monitoring and alerting. Used Splunk to monitor the system logs as well as notify the incident management system upon exceeding thresholds.

Talent Cogent Inc, Hyderabad, India

Feb 2020 – March 2021

Linux System Administrator

Responsibilities:

- Installed, configured, and maintained Red Hat Enterprise Linux (RHEL) 5/6 and Solaris 10/11 systems, including periodic updates and security patching using YUM, RPM, and vendor patch utilities.
- Built and managed Kickstart servers for automated Linux provisioning and Jumpstart/Flash archives for Solaris deployment, ensuring consistent OS rollouts across environments.
- Handled system performance tuning and kernel optimization on RHEL systems; added custom kernel parameters to improve responsiveness and reduce latency.
- Administered LVM and Veritas Volume Manager (VxVM) for disk management; performed tasks like creating volumes, resizing partitions, mirroring disks, and migrating data.
- Developed and maintained shell scripts (Bash, Python) for monitoring disk usage, services, log files, and automating routine admin tasks.
- Troubleshoot and resolved cluster issues with Veritas Cluster Server (VCS) including resource failures and service group configuration in 2- and 4-node cluster setups.
- Managed virtualization environments using VMware ESX 3.5, deploying and configuring VMs with RHEL templates for test and production workloads.
- Configured and supported network services on Linux, including TCP/IP troubleshooting, NFS management, DNS resolution, and interface bonding on RHEL and Solaris.
- Supported application stack by installing and tuning middleware like Apache Tomcat, JBOSS, and WebSphere, and integrated LDAP for centralized authentication.
- Assisted in backup and disaster recovery strategies using VERITAS NetBackup and NetApp snapshots, including configuration of SAN/NAS storage arrays and zoning via EMC tools.

Education:

- Masters in computer science (Governors State University)
2022
