

Mohd Waseem Ahmed Khan

Certified PSM1 (Professional Scrum Master)

Mobile: +1(214)557-6886, E-Mail: wasim2111@gmail.com

Accomplishing assignments in Testing for Navitiare platform, Manual, Automation, API Testing with Volaris Airlines Project as 'Senior Quality Analyst' seeking a company with excellent opportunities for a challenging career and a progressive environment that is conducive to professional growth.

CAREER PRÉCIS

- ♦ **Software Testing Professional, 14 years & 7 Months** of experience in Software Testing. (Navitaire platform having 10 years of experience)
 - ♦ **Having onsite work experience** with the client **Southwest Airlines in Dallas Texas, United States**, involved in the complete life cycle of the Enterprise Tokenization testing releases.
 - ♦ **Having onsite work experience** with the **flynas Airlines in Riyadh, Saudi Arabia**, involved in the Requirement discussion, Project Planning, Production defects discussion and mitigate the plan to resolve the issues and provided knowledge transfer on Airlines Domain to different departments like Utilities, Revenue Management Team, GDS Team & Backend team.
 - ♦ Extended Expertise in Airline and Healthcare Domain.
 - ♦ Knowledge of Software Testing Life Cycle. Work experience in all phases of testing life cycle i.e. Test Planning, Test Case Design, Test Execution and Defect Management.
 - ♦ Extensive experience in Functional Testing, Automation Testing, API Testing Integration Testing, Security Testing, Regression Testing, Browser Compatibility Testing and User Acceptance testing.
 - ♦ Strong Experience in Automating Web Application Testing using KATALON STUDIO and Selenium WebDriver.
 - ♦ Writing Test cases using Element locators, Record and play, Java programming features. Expertise in writing unique XPath identification to identify the Elements.
 - ♦ API testing using Postman tool
 - ♦ Good understanding of the programming language Java
 - ♦ Well, I'm acquainted with all phases of SDLC and STLC.
 - ♦ Good exposure to different development methodologies like Waterfall, V-Model and Agile (Scrum).
 - ♦ Domain training experience for approximately 40 new joiners on Navitiare platform for different Airlines.
 - ♦ An effective communicator with exceptional relationship management and analytical skills.
 - ♦ Given End-User training to Client on Healthcare platforms.
 - ♦ Lead a team of 5 members for Southwest Airlines Project and flynas Airlines on Navitiare platform.
 - ♦ **Having H1B United States of America (USA) Work Visa.**
-

SCHOLASTICS

Bachelor of Science - Osmania University, 2009
BIPC from Board of Intermediate Andhra Pradesh, 2006
SSC from Board of Secondary Education, 2004

SKILL SET

FUNCTIONAL

- ♦ Manage the team for flynas Airlines and Volaris Airlines.
- ♦ Having good knowledge of Navitiare tools like Sky speed, Loyalty, Sky schedule, Go-Now, Sky Utilities Etc.
- ♦ Engineering and reviewing test cases design.
- ♦ Writing test scripts for Automation and executing it.
- ♦ Conducting tests & maintaining required documents.
- ♦ Delivering & implementing project as per scheduled milestones. Ensuring compliance to quality standards.
- ♦ Providing post-implementation, application maintenance and enhancement support regarding the product / software application.

TECHNICAL

Automated Testing Tools: **Katalon Studio & Selenium**

API TESTING TOOLS: **POSTMAN**

Bug Tracking Tools: **Azure DevOps, JIRA, QC, Team foundation server (TFS), & Bugzilla**

DOMAIN

- ♦ Airlines
- ♦ Healthcare
- ♦ e-Learning

CERTIFICATIONS

- ♦ PSM1 (Professional Scrum Master) from scrum.org

EMPLOYMENT CHRONICLE

- ♦ Working as “Senior Quality Analyst” for Volaris Airlines since August 2023 on the Payroll of BCS technologies with Designation “Project Lead”.
- ♦ Worked as “Senior Quality Analyst” for flynas Airlines Saudi Arabia based, Supporting from Hyderabad, India from August ‘2018 to August ‘2023
- ♦ Worked as “Project Lead” for Cigniti Technologies Limited, Hyderabad from May’2014 to August ‘2018.
- ♦ Worked as “Associate” for Wipro Infotech from June’ 2010 to May ‘2014.

Projects Handled:

❖ Volaris Airlines

Client Name: Volaris Airlines

Role : Senior Quality Analyst

Domain : Airlines

Company : BCS Technologies

Volaris Airlines is a Mexican low-cost airline based in Santa Fe, Álvaro Obregón, Mexico City with its operating bases in Cancún, Guadalajara, León/Del Bajío, Mexicali, Mexico City, Monterrey, and Tijuana. It is Mexico's largest airline by transported passengers and serves domestic and international destinations within the Americas. It is the leading airline in the Mexican domestic airline market with a market share of 42%.

Roles & Responsibilities:

- **Participated in Daily Scrums** to provide status updates, highlight blockers, and plan tasks for the day.
- **Collaborated in Biweekly Sprint Planning** sessions to prioritize and select items for the upcoming sprint.
- **Engaged in Requirement Discussions** with the Product Owner to clarify and define user stories and acceptance criteria.
- **Coordinated Grooming Sessions** with the team to ensure thorough understanding of sprint items/stories and their corresponding requirements.
- **Lead a Team of 4** (3 Manual Testers and 1 Automation Tester), providing guidance and ensuring adherence to best practices.
- **Designed Test Cases** based on detailed requirements and maintained the **Requirement Traceability Matrix (RTM)** for comprehensive test coverage.
- Peer - reviewing the Test Cases written by the team.
- **Assigned Test Cases** to the Automation team, providing guidance and ensuring maintenance of scripts for each sprint and regression testing.
- **Automating the test cases using Selenium**
- **Performs API testing using Postman**
- **Executed Test Cases** manually and Automation using Selenium for IBE and Mobile responsive according to the sprint plan, logging defects in **JIRA** and tracking them through resolution.
- Performing Smoke testing, Functional testing, Browser Compatibility testing, boundary testing using different techniques like Equivalence partition etc. and Regression testing.
- **Conducted Defect Triage Calls** with development and QA teams to prioritize and address reported issues.
- **Re-tested Defects** and failed test cases to verify fixes and ensure quality.
- **Performed Regression Testing** to validate that new changes did not negatively impact existing functionality.
- Provided **Production Support** during and after releases, ensuring smooth deployment and immediate issue resolution
- **Retrospective meeting**- The Scrum team meet to reflect and identify opportunities for improvements for future Sprints. During the Retrospective we discuss **WHAT WENT WELL, WHAT KIND OF WORKED, WHAT DIDN'T WORK**

❖ **Frontier Airlines**

Client Name : Frontier Airlines
Role : Senior Quality Analyst
Domain : Airlines
Company : BCS Technologies

Frontier Airlines is a major ultra-low-cost American airline headquartered in Denver, Colorado. It operates flights to over 100 destinations throughout the United States and 31 international destinations and employs more than 3,000 staff.] The carrier is a subsidiary and operating brand of Indigo partners, LLC, and maintains a hub at Denver International Airport with numerous focus cities across the US.

Roles & Responsibilities:

- Weekly Sprint meeting where understands & analyses functional & business requirements from Product Owner.
- Sharing my experience wherever requirement is not clear and sometimes wrong approach of the requirement, immediate I raise the concern and make the requirement clear.
- Discuss the requirements from Business team, write the test cases in Azure DevOps as per User stories written by Product owner, Make the Test suite and linked all the test cases, User stories & Defects to the test suite to track the results and traceability Matrix.
- Perform Manual testing for IBE (Internet booking Engine), Mobile Applications (Android & IOS).
- Automated test cases using Selenium for IBE application/Website
- Prepared test suite for Automation regression and ran whenever build release for testing.
- Peer - reviewing the Test Cases written by the team.
- Executing Test cases, Defect logging, retesting defects, Tracking & Maintenance of Defects in Azure DevOps.
- Verification of PNR's using Skyspeed & Loyalty application,
- Testing the software applications like IBE and Mobile applications, Writing the test cases Azure DevOps., looking out for the defects and reports under Azure DevOps., tracking test results in Azure DevOps.
- Delivered the assured quality products within the project timelines.
- Performing Smoke testing, Functional testing, Browser Compatibility testing, and Regression testing.
- Prepared the WIKI Page in Azure DevOps for understanding the functionality for requirement.
- Performed Testing using different Customer service Applications like Sky speed, Sky schedule, Sky Now, Utilities & Sky fare.
- Retrospective meeting- The Scrum team meet to reflect and identify opportunities for improvements for future Sprints. During the Retrospective we discuss WHAT WENT WELL, WHAT KIND OF WORKED, WHAT DIDN'T WORK

❖ **Flynas**

Name : Flynas
Role : Senior Quality Analyst
Domain : Airlines
Company : Flynas

Flynas is a leading low-cost carrier from Saudi Arabia with a young fleet of 29 aircraft, operating nearly 1000 weekly flights to 33 destinations within and outside of Saudi Arabia. Flynas, the Saudi airline, operates value for money flights out of our hubs of Riyadh, Jeddah and Dammam to 30 cities across 8 countries. Share routes and flights with Etihad, to 17 cities across 11 countries. Operating flights from its hubs in Riyadh and Jeddah to domestic airports in Saudi Arabia and international destinations in Egypt, Jordan, Kuwait, Turkey, Sudan, Bahrain and the UAE.

Roles & Responsibilities:

- Understands & analyses functional & business requirements.
- Prepare test plan, test scenarios, and traceability matrix.
- Manage the team, allocate the daily tasks and share the status to development team
- Perform Manual testing for IBE (Internet booking Engine), Mobile Applications (Android & IOS).
- Verification of PNR's using Skyspeed & Loyalty application,
- Verification of production defects reported by the customers and provide the report to the management BUG, NOT AN BUG, NEW REQUIREMENT ETC.
- Discuss the requirements from Business team and make BRD document
- Automated test cases and use cases primarily for regression testing.
- Execute and analysis automation test results and giving detailed report for every new build.
- API testing using Postman tool to test the request and response failure
- Testing the software applications, developing test cases, looking out for the defects, tracking test results.
- Carrying forward process improvement projects, sharing Weekly Status Reports, Release wise Reports, Test Summary Report with test metrics dashboard
- Delivered the assured quality products within the project timelines.
- Peer - reviewing the Test Cases written by the team.
- Executing Test cases, Defect logging, retesting defects, Tracking & Maintenance of Defects in JIRA.
- Performing as Smoke testing, Functional testing, Compatibility testing, and Regression testing.
- Prepared the Document of understanding and guided the team as when required with the technical solutions.
- Using different Customer service Applications like Skyspeed, Sky schedule, Sky Now, Utilities & Sky fare

❖ **Enterprise Tokenization (ET)**

Client Name : Southwest Airlines
Role : Project Lead
Domain : Airlines

Company : Cigniti Technologies

Description:

SWA is supported by 23 different applications like Altea Reservation Desktop (ARD), Altea Customer Management (CM), Dotcom, CS2, QIK, Smartclixx_CFM, Smartclixx_UFR, RefundPro, Info view etc. Southwest.Com is one of the main applications. In addition to flights, Customers are also able to make car, hotel, cruise, and complete vacation package reservations on southwest.com. Enterprise Token is a Module of SWA which deals with passing of tokenized information through different applications that is generated after a valid transaction.

Initially, credit card information was used to flow through the applications. But as there is a chance of breach in security, they have introduced the concept of tokenization. Here, instead of Credit Card information a token would be created, and this information would be passed through the supported applications.

Roles & Responsibilities:

- Authored, Reviewed and Updated test scenarios, test cases and executed test cases as per the requirements.
- Involved in various levels of test case execution like Smoke, Sanity, UI, End to End, Regression testing, for various Modules & Sub-modules.
- Actively involved in functional specification reviews and raising the flags if for any incorrect/limited requirements.
- Defect analysis, reporting, verification and updating using on time /QC.
- Regularly interacted with onsite QA team and management teams for updates on the current Sprint while working for Maintenance team.

❖ Napier HIS

Client : Napier
Role : Senior Test Engineer (STE)
Domain : Health Care
Company : Cigniti technologies Pvt Ltd

This project is a three-tier architecture-based web-application that covers all departments of a hospital and automates various functionalities of each department and integrates them. One track in this project aims to implement healthcare services. It allows the patients to take online appointments and to capture their details. It can also be used by hospital officials in various departments to capture and maintain patient data, services provided to patients, details of stock in various departments, check for infections periodically in various departments etc. The Project is a Web based application on HIS (Hospital Information Service) product. The main modules are Master Data Management and Security, Front Office, Nursing Station, Physician, Inventory, and SCM.

Roles & Responsibilities:

- Preparation of Test scenarios based on FSD Documents provided.
- Analysis of Functional Specifications and executing the test cases in each build, documented test results in test execution documents, and prepared the problem logs for all the bugs found and reported issues in Bugzilla.
- Provided the KT to the Test Engineers to automate test script.
- Identifying the test scenarios to be automated.

- Involved in Functional, Integration & Regression Testing.
- Reviewed documentation for correctness and clarity.

❖ NxG (Wipro HIS Product)

Client : Wipro
 Role : Software Test Engineer
 Domain : Health Care
 Company : WIPRO INFOTECH

This project is a three-tier architecture-based web-application that covers all departments of a hospital and automates various functionalities of each department and integrates them. One track in this project aims to implement healthcare services. It allows the patients to take online appointments and to capture their details. It can also be used by hospital officials in various departments to capture and maintain patient data, services provided to patients, details of stock in various departments, check for infections periodically in various departments etc. The Project is a Web based application on HIS (Hospital Information Service) product. The application is divided into 29 modules. The main modules are Administration and Security, Registration, Wards, Physician, Contract management, MMS and Billing.

Roles & Responsibilities:

- Writing Test Scenarios & Test Cases.
- Mapping the test cases to requirements.
- Keep track of the new requirements for the product and update testing documents accordingly.
- Perform GUI, Integration, Regression, Security, System and backend testing
- Retesting test activities because of action taken for each discrepancy and regression testing
- Co-ordinate with the development team, for unresolved or ambiguous defects status reported
- Perform Manual Testing for different modules like Billing, Pharmacy & Case sheet.
- Logging of bugs in TFS.
- Trained new resources on the desired functionality
- Knowledge transfer to the developers / testers as and when required.

❖ NMC (New Medical Centre)

Client : NMC
 Role : Software Test Engineer
 Domain : Health Care
 Company : WIPRO INFOTECH

This project is a three-tier architecture-based web-application that covers all departments of a hospital and automates various functionalities of each department and integrates them. One track in this project aims to implement healthcare services. It allows the patients to take online appointments and to capture their details. It can also be used by hospital officials in various departments to capture and maintain patient data, services provided to patients, details of stock in various departments, check for infections periodically in various departments etc. The Project is a Web based application on HIS (Hospital Information Service) product. The main modules are Administration and Security, Registration, Wards, Physician, Contract management, MMS and Billing

Roles & Responsibilities:

- Preparation of Test scenarios based on HLR Documents provided.
- Analysis of Functional Specifications and executing the test cases in each build, documented test results in test execution documents, and prepared the problem logs for all the bugs found and reported issues in TFS
- Identifying the test cases to be automated and developing the Test cases in VSTS Coded UI.
- Executing the test scripts
- Involved in Functional, Integration, Regression & Smoke Testing.
- Reviewed documentation for correctness and clarity.

❖ NxG (Wipro HIS Product)

Client : Wipro
Role : Software Test Engineer
Domain : Health Care
Company : WIPRO INFOTECH

This project is a three-tier architecture-based web-application that covers all departments of a hospital and automates various functionalities of each department and integrates them. One track in this project aims to implement healthcare services. It allows the patients to take online appointments and to capture their details. It can also be used by hospital officials in various departments to capture and maintain patient data, services provided to patients, details of stock in various departments, check for infections periodically in various departments etc. The Project is a Web based application on HIS (Hospital Information Service) product. The application is divided into 29 modules. The main modules are Administration and Security, Registration, Wards, Physician, Contract management, MMS and Billing.

Roles & Responsibilities:

- Writing Test Scenarios & Test Cases.
- Mapping the test cases to requirements.
- Keep track of the new requirements for the product and update testing documents accordingly.
- Perform GUI, Integration, Regression, Security, System and backend testing
- Repeating (retesting) test activities because of action taken for each discrepancy and regression testing
- Co-ordinate with the development team, for unresolved or ambiguous defects status reported
- Perform Manual Testing.
- Logging of bugs in TFS.
- Trained new resources on the desired functionality
- Knowledge transfer to the developers / testers as and when required.

❖ Dhanwantri

Client : ESIC (Employee State Insurance Corporation)
Role : Software Test Engineer
Domain : Health Care
Company : WIPRO INFOTECH

It is a Medical Information System implemented at hospitals and dispensaries where medical services are offered. The Project is a Web based application on HIS (Hospital Information Service) product. The application is divided into 34 modules. The main modules are Administration and Security, Masters, Registration, Wards, Physician, Interfacing, Contract management, Insurance, Scheduling and Stores.

Roles & Responsibilities: [OBJ]

- Supported to deploy the application in fresh environment and ensure that working fine.
- Upgraded application by deploying latest patch, which are received from offshore.
- Done end to end testing on testing environment periodically on Customer location
- Training the end users about their respective Modules in the Application.
- Conducting Test and taking feedback on the training session.
