

Munideepa Vallambai

Full Stack Software Developer

Location: Cincinnati, OH | Mobile: 513-413-5271 | Email: munideepa1910@gmail.com

Professional Summary

Skilled software developer with over 4+ years of experience in creating reliable full-stack web applications using Java, Node.js, Spring Boot, JavaScript, and React.js, specializing in microservices architecture, REST APIs, GraphQL, and scalable system design. Experienced in managing databases like PostgreSQL, MongoDB, and MySQL to optimize data storage, retrieval, and scalability. Proficient in cloud technologies such as AWS, Kafka, Docker, and Kubernetes, ensuring scalable, reliable, and efficient software deployment processes. Strong foundation in computer science, with expertise in object-oriented design, data structures, and algorithms. Utilizes cloud technologies, microservices, and best coding practices to ensure high availability, seamless user experience, and efficient resource management. Familiar with Agile methodologies, contributing to adaptable and iterative development cycles for better project delivery.

Skills

- **Languages:** Java, JavaScript, C++, C#, Typescript, JavaScript, HTML 5, CSS 3
- **Frameworks & Libraries:** React JS, Node JS, Jest, TestNG, NodeJS, Express JS, Bootstrap, Spring, Junit, Spring Boot, Spring Hibernate, Spring Security, Selenium, Enzyme, Material UI, Next Js
- **Software and Databases:** MySQL, MongoDB, Redis, DynamoDB, AWS RDS, PostgreSQL, Kafka, Postman
- **Cloud & DevOps:** AWS Lambda, API Gateway, Docker, RDS, EC2, CloudFront, Cognito, Kubernetes, JUnit
- **Analytic Tools, ORM, and API:** Splunk, Snowplow, REST API, GraphQL, SOAP, Sequelize, GitHub

Experience

PlaneKrafty I Cincinnati, OH USA

June 2024 - Present

Junior Software Developer

- Developed scalable RESTful APIs for PlaneKrafty using Java, Spring Boot, Spring MVC, and Hibernate ORM. By leveraging Hibernate's entity mapping and session management, the system's performance improved by 30%, resulting in faster data processing and seamless server-to-server communication.
- **Developed dynamic UIs** for PlaneKrafty using **React.js**, **component-based architecture**, **state management with hooks and Redux**, and **React Router** for smooth navigation.
- Utilized **SCSS** for modular styling, and implemented **CSS Grid**, **Flexbox**, and **Bootstrap** to create responsive layouts, boosting user engagement by **35%** through enhanced design and performance.
- Actively participated in an Agile workflow, utilizing GitHub for testing, code reviews, and documentation, leading to a 10% decrease in defects identified post-deployment.
- Implemented secure authentication with **JWT** and **Spring Security**, using **bearer token** authorization for API access, enhancing security, and reducing unauthorized access by 20%.
- Hosted the **frontend** and **backend** on **EC2 instances**, orchestrated containers with **Kubernetes**, and utilized **Docker** for efficient deployment, ensuring **scalability** and seamless performance.
- Integrated **S3 buckets** for file storage and **RDS** for **MySQL** management, while establishing **CI/CD pipelines** with **Jenkins** and **GitHub** to automate testing, building, and deployment processes.
- Used **Jest**, **React Testing Library**, and **Playwright** for frontend and end-to-end testing, and **JUnit**, **Mockito**, and **Postman** for backend testing, ensuring reliable and bug-free application functionality.
- Developed a scalable logging system for PlaneKrafty using Kafka, Spring Events, and SLF4J for real-time monitoring, enhancing issue detection and improving system reliability.

- **Developed and maintained Java microservices** like **us-handler** and **us-processor** using **Spring Boot** and **PostgreSQL** to process printer payloads, enabling seamless operations for **Managed Print Services (MPS)** project, including consumable replacements and lifecycle management.
- Built backend services with **Node.js**, **Express.js**, and **Sequelize** for **MySQL**, migrated **RESTful APIs** to **GraphQL**, and designed serverless architectures using **AWS Lambda**, **API Gateway**, and **CloudFormation** for scalable deployments.
- **Used React.js** to build dynamic user interfaces with features like **Lazy Loading** for better performance, **Code Splitting** to optimize bundle size, and **React Context API** and **Redux** for efficient global state management, enhancing the app's scalability and maintainability.
- Integrated **SonarQube** into the **CI/CD** pipeline with **Jenkins** and **GitLab**, achieving 90% code coverage, reducing technical debt by 35%, minimizing errors, and optimizing database queries to enhance page load times by 35%.
- **Refactored Java code** using **design patterns**, optimized **algorithms**, and implemented **robust exception handling**, resulting in a **35% reduction in redundancy**, bug fixes, and improved **system performance** and **stability**.
- Implemented unit tests with **JUnit**, **Mocha**, and **Chai**, improving **code quality by 80%**. Leveraged **AWS services** to reduce costs by **30%**, enhance **monitoring by 20%** with **CloudWatch**, and optimize **serverless computing** using **Lambda** and **SNS** for better efficiency.

Presidio | Bangalore, INDIA
Software Engineer

Sep 2020 – Jan 2023

- Developed **REST APIs** with **Java Spring Boot**, and **MongoDB**, optimizing data storage, retrieval, and integration for the **Autodesk Virtual Assistant** chatbot, enhancing performance and scalability.
- Developed the frontend using **React.js**, **Redux**, **JavaScript**, **HTML5**, and **CSS**, leveraging **component lifecycle**, **unidirectional data flow**, and **responsive design**, which improved performance and boosted team collaboration efficiency by 25%.
- Built serverless apps on **AWS** with **S3**, **DynamoDB**, **Lambda**, and **API Gateway**, boosting efficiency by 30%. Integrated **Jenkins** and **GitHub** for **CI/CD**, automating code deployment for faster, consistent releases.
- Proficiently used **Selenium** in **Java** for **automation testing**, demonstrating a commitment to detail-oriented practices and improving testing efficiency by 15%

Education

University of Cincinnati
Master of Engineering in Computer Science

August 2023 – Dec 2024
Cincinnati, Ohio, United States

Sastra Deemed University
Bachelor of Technology in Information Technology

August 2016 – July 2020
TamilNadu, India

Certifications

Microsoft .NET Framework Certification, Microsoft Azure Fundamentals, JavaScript (Basic) & (Intermediate) Certification from Hacker Rank
