Phone: 469-629-6787

URL: [linkedin.com/in/nazeersk4831](https://www.linkedin.com/in/nazeersk4831)

Highly motivated and dedicated Cloud DevOps professional having around 7 years of experience. Seeking a position to utilize my strong technical skills and passion for data to contribute to the success of an organization. Committed to leveraging my knowledge of Automation processes and programming languages to support the organization's data-driven decision-making and drive with continuous improvement in data management practices.

PROFESSIONAL EXPERIENCE

- More than 7+ years of experience on Cross Platform (Web & Client-Server) application development and design with major focus on Cloud (Azure, AWS), DevOps, Configuration management, Infrastructure automation, Continuous Integration and Delivery (CI/CD), OpenStack, Linux System Administration using CloudFormation templates, Software Configuration, and Build/Release Management using tools like Git, Jenkins, Maven, Docker, etc.
- Expertise in Architecting and Implementing Azure Service Offering, such as Azure cloud services, Azure storage, Azure Resource Manager, Blob Storage, Azure VMs, SQL Database, Azure Monitor.
- Expertise in Azure Scalability and Azure Availability - Build VMs availability sets using the Azure portal to provide resiliency for IaaS based solution and Virtual Machine Scale Sets (VMSS) using Azure Resource Manager (ARM) to manage network traffic.
- Experience in migrating on-premises applications to Azure and configured VNETs and subnets as per the project and performed PowerShell scripting to do Patching, Imaging, and Deployments in Azure.
- Implemented a CI/CD pipeline using Azure DevOps (VSTS, TFS) in both cloud and on-premises with GIT, MS Build, Docker, Maven along with Jenkins plugins.
- Experienced infrastructure engineer proficient in designing, implementing, and managing cloud-based solutions on Amazon Web Services (AWS). Skilled in both Infrastructure as a Service (IaaS) and Platform as a Service (PaaS) offering, with a focus on optimizing performance, scalability, and cost-efficiency
- Good knowledge on Terraform for building, changing, and versioning infrastructure safely and efficiently.
- Good knowledge of AWS setup functions to automate such as publishing data to S3 and deploying it for prediction Configured/Integrated Jenkins with Git to poll codes and Maven to push artifacts to AWS S3.
- Expertise in leveraging AWS RDS or equivalent cloud DB PaaS. Worked with containerization (e.g. Docker, Kubernetes, Amazon EKS).
- Experienced in hosting and deploying applications by using WebSphere Application Servers.
- Proficiency in using Docker Hub, Docker Engine, Docker images, Docker Weave, Docker Compose, Docker Swarm, and Docker Registry and used containerization to make applications platform when moved into different environments.
- Expertise in building CI/CD on AWS environment using AWS Code Commit, Code Build, Code Deploy and Code Pipeline and experience in using AWS CloudFormation, API Gateway, and AWS Lambda in automation and securing the infrastructure on AWS.
- Experience in Kubernetes to deploy scale, load balance, and manage Docker containers with multiple namespaced versions using Helm charts.

- Enhanced security posture by implementing IAM policies, encryption mechanisms, and monitoring solutions to meet compliance requirements.
- Expertise in configuring the monitoring and alerting tools according to the requirement like Prometheus and Grafana, setting up alerts and deploying multiple dashboards for individual applications in Kubernetes
- Utilized Cloud Watch to monitor resources such as EC2, CPU memory, Amazon RDS services, EBS volumes, to set alarms for notification or automated actions and to monitor logs for a better understanding and operation of the system.
- Experience in migrating on-premises applications to Azure and configured VNets and subnets as per the project requirement also performed PowerShell scripting to do Patching, Imaging, and Deployments in Azure.
- Ability to plan, install, configure, and optimize IT Infrastructure to consistently achieve high availability and performance. Significant experience working in small to large environment.
- Possess excellent communication, interpersonal and analytical skills along with a can-do attitude.

TECHNICAL SKILLS

- **Cloud Technologies** : Azure DevOps, Azure Board, Azure Repos, Azure Admin, Azure Migration, Azure Data Factory, Databricks and Microsoft Patching, **AWS** (EC2, ELB, S3), IaaS, PaaS with AWS, AWS Glue, Amazon EMR Clusters, AWS RDS, Athena, Airflow, AWS CloudWatch, AWS QuickSight, EventBridge, AWS Secret Manager, CloudFormation, Kubernetes, Docker, EKS, ARM templates, Azure DevOps, Jenkins, and related technologies.
- **IaC Tools**: Terraform, Azure BICEP, ARM Templates, Ansible, Kubernetes.
- **Databases**: SQL, PostgreSQL, DB2, MS-Access, DynamoDB, MongoDB, Redshift.
- **Scripting languages**: LINUX, Bash Script, Shell Script, JSON, YAML.
- **Build Tools**: ANT, MAVEN, Docker, Kubernetes.

Integrity Marketing Group, Texas, USA

Role: Sr Cloud DevOps Engineer

March 2023 –Present

- Integrated DevOps principles and practices using automation platform scripts, and IaC to increase efficiencies – including ARM templates and terraform.
- Experience in Kubernetes to deploy scale, load balance, and manage Docker containers with multiple namespaces using Helm charts.
- Configured Kubernetes to orchestrate the deployment, scaling and management of Docker containers.
- Designed and configured Azure Virtual Network (VNet), subnets, Network Security Groups (NSGs), and VPN Gateway for secure communication across hybrid environments.
- Utilized Azure Automation to create runbooks for automating repetitive management tasks, including VM provisioning, patching, and resource cleanup.
- Integrated Azure Data Factory with on-premises and cloud data sources to automate data pipelines.
- Set up Azure Load Balancer and Application Gateway to distribute traffic efficiently across virtual machines.
- Work with CloudFormation templates, OpenShift templates for spinning up resources as needed in cloud.
- Implemented the configuration of Azure IaaS and PaaS services for high availability data redundancy, data loss prevention, site recovery and resilience per Microsoft best practices.
- Automated infrastructure provisioning and configuration using Terraform and AWS CloudFormation, ensuring consistency and efficiency across deployments.
- Work on Deployment of AWS infrastructure using Terraform - Planning of AWS infrastructure, inspecting of AWS resources, inspecting the state of AWS infrastructure and applying configuration changes.
- Setup scalability for application servers using command line interface for setting up and administering DNS system in AWS using Route53 Managing users and groups using the Amazon IAM.

- Controlled the cost and expenses on AWS Services by creating the AWS Instance scheduler by 70% of the AWS Cloud Services bill.
- Created the custom AWS Config Rules to identify the Compliance and non-compliance resources. Auto-remediate the non-compliance resources as per the organization standards.
- Worked on Kubernetes to deploy scale, load balance, scale and manage Docker containers with multiple namespaced versions using Helm Charts.
- Develop and maintain CI/CD pipelines using Jenkins, GitLab CI, and OpenShift Pipelines.
- Experience working with Jira and ServiceNow.
- Reduced build & deployment times by designing and implementing Docker workflow.
- Worked on core AWS services such as Setting up new server (EC2) instances/services in AWS, configuring security groups, and setting up Elastic IP's, auto-scaling and Cloud Formation.
- Guiding the scrum teams and larger organization on how to get the most out of Agile/Scrum practices.
- Used Simple storage services (s3) for snapshot and Configured S3 lifecycle of Applications & Databases logs, including deleting old logs, archiving logs based on retention policy of Apps and Databases.

Aetna, Richmond, VA

Role: Cloud DevOps Engineer

Feb 2021 – Dec 2022

- Managed and implemented Azure Hybrid Environment for the firm.
- Proficient in Azure Active Directory, VMs, Vnet, Load balancer and firewall.
- Responsible for design, development, application architecture, use cases, flowcharts, application flow, prototypes, proof concept of sample codes.
- Deployed and monitored scalable infrastructure on Azure/Amazon web services (AWS) & configuration management using puppet.
- Developed and maintained infrastructure as code using tools like Terraform and Ansible for consistent and scalable deployments.
- Built scripts using ANT and MAVEN build tools in Jenkins to move from one environment to another environment.
- Built Grafana dashboards with custom visualizations to provide actionable insights into system metrics and trends.
- Established monitoring and alerting systems with Prometheus, Grafana, and ELK stack for proactive issue detection and resolution.
- Built pipelines using Jenkins as CI tool and worked on building Jenkins jobs to create AWS infrastructure from GitHub repositories containing Terraform code.
- Applied Infrastructure as Code principles using Terraform to automate the provisioning and configuration of Virtual Machine VMs and containerized environments.
- Successfully managed and executed multiple Ubuntu OS upgrades, ensuring minimal disruption to user workflows. Integrated CloudWatch with other AWS services such as EC2, S3, and Lambda, optimizing monitoring capabilities across the entire infrastructure.
- Used AWS SDK for connection to Amazon S3 buckets as it is used as the object storage service to store and retrieve the media files related to the application.
- Developed API for using AWS Lambda to manage the servers and run the code in the AWS.
- Used Amazon CloudWatch to monitor the application performance and used the logs to identify any threshold limits.
- Automated the cloud deployments using chef, python and AWS CloudFormation Templates.
- Responsible for continuous integration and continuous delivery using Jenkins and Maven and AWS Code Pipeline.

- Extensive Experience in writing AWS Cloud formation scripts to automate the AWS Services.
- Experience in creating, designing, configuring and managing EC2 instance in VPCs by setting up all the resources like NAT gateway and Internet gateway depending on the requirement using AWSconsole, CFS and AWS CLI.
- Implemented a Continuous Delivery pipeline with Docker, Jenkins and GitHub. Whenever a new GitHub branch gets started, Jenkins automatically builds a new Docker container from it.
- Designing project workflows
- Used Dynamo DB to store data for metrics and backend reports.
- Created an AWS Code pipeline to automate build and deployments.
- Used GitHub for version controlling, creating new releases, fixing pre-req issues for TEST Builds.

Insta TBS Private Ltd, HYDERABAD, INDIA.

Role: DevOps Engineer

June 2017 – Oct 2020

- Created and maintained continuous integration (CI) using tools Jenkins/Maven over different environments to facilitate an agile development process which is automated and repeatable enabling teams to safely deploy code many times a day while ensuring operational best practices are supported
- Implemented Application and Data migration from on-premises to AWS cloud.
- Designed and implemented logging and monitoring solutions using ELK Stack and CloudWatch.
- Built and managed S3 bucket policies. Used S3 bucket and Glacier for storage and backup on AWS. Involved in designing and deploying multiple applications using AWS Cloud infrastructure focusing on high availability, fault tolerance and auto scaling the instances.
- Launched EC2 instances and configured AWS IAM roles for them.
- Automated deployment processes using CI/CD pipelines with Jenkins, GitLab CI, and ArgoCD.
- Collaborated with security teams to implement IAM policies, network security groups, and encryption protocols to safeguard sensitive data.
- Created Restful API and monitoring tools using Python-flask and MYSQL database.
- Develop reliable, efficient Splunk queries that will feed custom Alert, Dashboards and Reports.
- Implementation of Splunk integration to external systems.
- Built a VPC, established the site-to- site VPN connection between Data Center and AWS.
- Work to oversee, design, implement, and manage DevOps capabilities in the cloud using CI/CD toolsets/automation like Ansible, Jenkins, GIT.
- Implemented cloud services IAAS, PAAS, and SaaS which include Docker.
- Managing Aws infrastructure with automation and orchestration tools such as Ansible.
- Created Dashboard's for monitoring the failures using Python Flask and auto opening tickets in BMC ITSM remedy.
- Maintained services once they are live by monitoring availability, latency and overall system health.
- Responsible for Workflow creation in Incident Management, Change Management, Event Management and Problem management.
