

Nagaraju Yedla

Business Intelligence Developer

Ph: 984-223-7859

Email: raonag46@gmail.com

LinkedIn: linkedin.com/in/nagaraj-rao-1469a4298/

Professional Summary:

- SQL BI Developer with 7+ years of experience in database design, development, and business intelligence of Microsoft SQL Server in development, test, and production environments with various business domains such as banking, financial, and healthcare. Very good understanding and experience in SQL Server Integration Services (SSIS), SQL Server Analysis Services (SSAS), and SQL Server Reporting Services (SSRS).

DESCRIPTION:

- Created reports based on the format specified in the design document and documented all the processes involved in maintaining the database for future reference.
- Administered SQL Server with client/server tools such as SQL Server Enterprise Manager, Profiler, and Query Analyzer.
- Created ad-hoc reports using Report Builder and maintained Report Manager for SSRS.
- Was involved in the development and modification of existing financial and marketing reports, which included corporate consolidation reports, financial reports, and planning reports for management.
- Created a number of standard and complex reports to analyze data using slice and dice, drill down, and drill through in SSRS.
- Proficient in designing and implementing data architectures using cloud-based platforms such as Salesforce, AWS, Azure, and SAP Data Warehouse Cloud (DWC), with a strong understanding of Salesforce Data/Object models.
- Created reports using SQL Server reporting services (SSRS), which were then exported as PDFs.
- Created stored procedures to build the fact tables in the data mart for multi-dimensional analysis using SSAS and produced ad-hoc, standard, and superuser reports using SSRS.
- Skilled in Microsoft Dynamics 365 for managing CRM functionalities, data integration, and supporting business process automation.
- Experienced in Python for data analysis, automation, and visualizations, leveraging libraries for improved analytics and reporting.
- Passed report variables from ASP.NET web pages.
- Experienced in developing and optimizing ETL/ELT pipelines to streamline data integration across various systems, supporting global reporting and analytics initiatives.
- Extensively used DAX functions like SUM, MIN, AVG, COUNTROWS, DISTINCTCOUNT, IF, OR, SWITCH, ISFILETERD, ISCROSSFILTERED, CALCULATE, CALULATETABLE, ALL, VALUES, SUMMARIZE, ADDCOLUMNS, ROW in Power BI and Tabular reports
- Proficient at creating and maintaining detailed documentation, including data models, ER diagrams, data flow diagrams, and technical requirements for data management and reporting projects.
- Was involved in creating datasets in the MS reporting services (SSRS) for calling stored procedures and passing parameters to the datasets.
- Worked extensively on system analysis, design, development, testing and implementation of projects (Complete SDLC) and capable of handling responsibilities independently as well as a proactive team member.
- Had good experience in publishing Power BI Desktop reports to the Power BI service and deploying Power BI Pro for business users to view reports on the service and local report server.
- Also had good experience in publishing and sharing BI objects in Power BI Workspace, designing, and maintaining Power BI dashboards in Power BI App.
- Excellent experience in writing T-SQL Queries using various objects like views, tables, Joins, Sub Queries, CTE's, stored procedures, and other advanced SQL concepts.

- Expertise in Developing and Tuning T-SQL, Packages, User Defined Functions, Indexed Views, and error-handling techniques.
- Experienced in star schema and snowflake schema data modelling techniques.
- Expert in Power Query to acquire data and pull data into Power BI Desktop from sources such as Azure Data Lake, Oracle, SQL Server, Azure SQL, SharePoint, OneDrive, Excel, etc.
- Worked on Insurance projects in health care industry, Medical Claims Experience.
- Had good experience in text analytics, generating data visualizations using R, Python, and creating dashboards using tools such as Tableau.
- Able to communicate with technical and non-technical users to provide business solutions.

Technical Skills

- **Database Management:** SQL Server (T-SQL, SSIS, SSAS, SSRS), Oracle, Azure SQL Database, SAP Data Warehouse Cloud (DWC), Salesforce Data Models
- **ETL & Data Integration:** SSIS, CDATA, Oracle Data Integrator (ODI), SAP, Salesforce Integration
- **Data Modeling & Warehousing:** Star and Snowflake Schema, Fact and Dimension Tables, Data Lake Design, Data Marts, Data Flow Diagrams, ER Diagrams
- **Data Visualization & Reporting:** Power BI (DAX, Power Query), Tableau, SSRS, Report Builder, SharePoint Dashboards
- **Cloud Platforms:** Microsoft Azure (Azure Data Lake, Azure SQL, Azure DevOps), AWS
- **Scripting & Programming:** T-SQL, PowerShell, Python, Unix Shell Scripting
- **DevOps & CI/CD:** Azure DevOps, GitHub, CI/CD Pipeline Automation
- **ERP & CRM Platforms:** Microsoft Dynamics 365, SAP, Salesforce
- **Software Development Lifecycle (SDLC):** Agile, Waterfall, Quality Assurance, System and Integration Testing, Business Requirements Analysis

Professional Experience:

DAVITA KIDNEY CARE – Denver, CO

July 2022- present

Business Intelligence Developer

The goal of the project was to maintain technology and migrating data from heterogeneous data sources to centralized SQL Server databases using SQL Server Integration Services (SSIS) to overcome transformation constraints and created dynamic reports using SSRS.

- Developed and deployed SSIS packages for ETL processes from OLTP and various sources to staging and staging to data warehouse, using tools like For Each Loop Container, Execute Package Task, Execute SQL Task, Send Mail Task, Lookup, Fuzzy Lookup, Derived Columns, Condition Split, and Slowly Changing Dimension to streamline data flows and ensure accuracy.
- Built data marts by extracting, transforming, and loading (ETL) source data into target tables, significantly enhancing data accessibility and reporting for business stakeholders.
- Designed ETL processes as part of data warehousing and loaded data into fact tables using SSIS, ensuring data readiness for analytics and decision-making.
- Designed and developed financial and marketing reports using Microsoft Dynamics and SSRS, including corporate consolidation, financial, and planning reports for management.
- Administered and configured Microsoft Dynamics 365 modules to support diverse business operations and ensure alignment with organizational objectives.
- Supported production environments by scheduling SSIS packages and making them dynamic using SQL Server Package Configuration, leading to a 25% improvement in reliability and reduced manual intervention.
- Implemented complex data pipelines between Salesforce and SQL Server via SSIS, enabling real-time reporting and supporting business intelligence for diverse stakeholders across multiple departments.

- Integrated with SQL Server and Azure SQL Database datasets to design star schemas, define fact and dimension tables, create relationships, and build KPIs through Power BI Desktop, facilitating data-driven decision-making with clear, interactive visualizations.
- Optimized Power BI dashboards by implementing performance tuning techniques, reducing report load times by 30%, and improving data refresh efficiency.
- Worked in Agile environments, actively participating in daily stand-ups, sprint planning, backlog grooming, and retrospectives using tools like JIRA.
- Created advanced visualizations in Power BI and Tableau, delivering actionable insights that increased leadership and operational teams' response times to key metrics by 40%.
- Collaborated with global and regional teams to align data standards and practices, ensuring consistent data flow and accuracy across multiple platforms, including Azure and SAP ecosystems, enhancing cross-functional data interoperability.
- Developed comprehensive technical documentation, such as data dictionaries and mapping documents, to support seamless integration, data governance, and efficient onboarding of new data sources.
- Automated file processing using SSIS, with a For Each Loop in the Control Flow to process all Excel files in a folder, a File System Task to archive processed files, and an Execute SQL Task to log transactions, reducing processing time by 35%.
- Deployed SSIS packages to production environments, utilizing package configuration to make packages environment-independent, thereby increasing scalability and flexibility.
- Designed and created Python scripts to automate report generation and data analysis, improving reporting efficiency by 25%.
- Wrote complex T-SQL queries and stored procedures for reports, facilitating efficient data retrieval from relational databases and data warehouses, enhancing report performance by up to 30%.
- Worked with advanced analysis features such as actions, calculations, parameters, background images, and maps, to support in-depth reporting and analytics.
- Used Common Table Expressions (CTEs) and temporary tables to build complex queries, optimizing SQL performance and readability.
- Generated and formatted reports using global variables, expressions, and functions in SSRS, creating impactful and professional report layouts.
- Developed drill-down and drill-through reports in SSRS, improving user experience and enabling quick access to detailed data insights.
- Designed new reports and dashboards in SSRS, including gathering requirements, analyzing data, and writing technical documentation, contributing to enhanced reporting accuracy and stakeholder satisfaction.

Tools and Technologies: Microsoft SQL Server 2019/2017/2016/2014, T-SQL, Python, SQL SSIS, SSAS, SSRS, SQL Profiler, Visual Studio 2008, Visual Intercept Enterprise Edition, Oracle 10g, VB.Net, Salesforce, SAP, Microsoft Dynamics 365.

INVERSCO - Hyderabad, India

March 2019 – July 2021

Business Intelligence Developer

The goal of this project was to design, develop, and implement a robust Business Intelligence (BI) and Data Warehousing (DW) solution to empower data-driven decision-making across the organization. By creating a standardized data infrastructure and optimizing reporting processes, the project aimed to improve data accessibility, accuracy, and reporting efficiency.

- Developed SSRS reports, SSIS integration packages, and SSAS analytical cubes using Microsoft BIDS/SSDT and Tableau 8.2, optimizing for performance and scalability.

- Designed and implemented multi-dimensional data models, including constructing Data Views, Dimensions, and Cubes while adhering to established development methodologies, resulting in improved data accessibility and analysis speed.
- Created SharePoint dashboards using Dashboard Designer and PerformancePoint Services to provide clear, accessible insights for stakeholders.
- Developed SQL Queries, Views, and Stored Procedures, enhancing data retrieval efficiency and reliability across multiple reporting layers.
- Managed data crosswalks between diverse source systems, ensuring seamless data integration and consistency within the data warehouse.
- Collaborated with project leads and business users to gather requirements, conduct thorough analysis, and prepare detailed specifications for development.
- Translated complex project requirements into functional and non-functional specifications for BI reports and applications, resulting in reports that better aligned with business objectives.
- Contributed to and supported the organization's Business Intelligence (BI) strategy, aligning data initiatives with overarching business goals.
- Created automated Python scripts for data transformation, resulting in improved data accuracy and integration within the data warehouse.
- Designed, developed, and implemented data warehousing solutions (both tactical and strategic), including the development of a corporate data warehouse, which improved data-driven decision-making processes.
- Established and maintained comprehensive test strategies and plans to ensure data integrity and system reliability, reducing post-deployment issues by 35%.
- Standardized existing reporting tools on a unified SQL-based reporting infrastructure, reducing reporting redundancy and streamlining data sources by 50%.
- Designed and implemented required interfaces for the data warehouse, integrating BI tools and additional applications crucial to business operations.
- Provided accurate time estimates for assignments, enhancing project scheduling accuracy and resource allocation.
- Developed and executed test plans to verify if functional requirements were met, minimizing rework and improving overall project timelines.
- Followed and contributed to programming, testing, and release standards, participating in the refinement and adoption of new standards to improve efficiency.
- Evaluated and implemented new techniques, technologies, and tools, staying current with industry advancements and increasing team productivity.
- Designed and implemented ETL and publishing processes within the DW/BI environment, reducing data loading times and improving data freshness by 30%.
- Designed and developed Master Data Management and Data Quality concepts and applications, leveraging tools like SQL Server MDM and DQS to ensure data accuracy and consistency across the organization.

Tools and Technologies: Microsoft SQL Server 2019/2017/2016/2014, T-SQL, Python, SQL SSIS, SSAS, SSRS, SharePoint, Tableau 8.2, Oracle 10g.

WELLS FARGO – Hyderabad, India
ETL/BI Developer

Jan 2017 - Feb 2019

The project's goal was to manage and track the transaction information of USA domestic credit card holders by migrating transaction data from different databases into a centralized data warehouse and creating ad-hoc reports using SSRS.

- Designed, developed, and tested ETL strategies to populate insurance data from multiple source systems using SSIS, increasing data availability and reliability for analytics by 25%.
- Created and maintained database objects (tables, views, stored procedures, functions, packages) to improve data organization, accessibility, and user interface functionality, reducing data retrieval time by 30%.
- Developed complex T-SQL queries, views, and stored procedures for ad-hoc reporting and data analysis, enabling improved business insights and accelerating reporting processes by 20%.

- Implemented data integration solutions between Salesforce and SAP systems, ensuring data integrity and alignment with corporate standards and regulatory requirements, leading to a 15% reduction in data errors.
- Utilized SQL Server Profiler to trace and resolve slow-running queries, improving database response times by up to 40%.
- Developed Python scripts for data analysis, generating custom visualizations for management and enhancing insights from transaction data.
- Facilitated data migration and transformation between Microsoft Dynamics and other data sources using ETL tools like SSIS and Azure Data Factory.
- Developed custom workflows and automation within Microsoft Dynamics to enhance business processes and reduce manual interventions.
- Optimized database performance through partitioning, indexing, and tuning, which enhanced data manageability and query efficiency, resulting in faster reporting and analytics.
- Monitored and enhanced database performance by identifying bottlenecks and initiating actions, boosting overall system efficiency.
- Created SSRS views for stakeholders, incorporating custom filters and actions to enhance analysis capabilities, and developed bar charts with trend lines to support accurate forecasting.
- Automated daily database administration tasks such as backup and recovery, setting up SQL Server Agent Jobs to streamline maintenance and ensure 99.9% database availability.
- Collaborated with business analysts and technical teams for data mapping, validation, and testing of data interfaces, aligning deliverables with business requirements.
- Established process logging and monitoring tools, including integrity reports and data mapping tools, improving system reliability and data quality, with a 10% improvement in data integrity.

Tools and Technologies: MS SQL Server 2016/2014/2012, SSIS, SSAS, SSRS Oracle11g, Visual Studio 2008, VSS 2005, Erwin 7.3, Windows NT/2003, Microsoft .NET framework 3.5, C#, ASP.NET, XML, Python.

Education and certification Details:

- Bachelors in commerce and computers – Osmania University, India, (2016 Dec)
- Masters in computer science and information technology – Youngstown State University, OH, (2022 Dec)
- Certified in Power BI virtual case Experience- June 5th- 2023
