

PROFESSIONAL SUMMARY:

- Around **5 years** of professional experience in all the phases of software development life cycle including Design, Development, Integration of Client/Server environment, Maintenance, Implementation and Testing of various software applications using **Java & Spring boot Microservices**
- Expert in Various **Agile** methodologies like **Test Driven Development, Incremental and Iteration methodology.**
- Extensive experience in developing web applications using **HTML4/5, XML, XHTML, DHTML, CSS, CSS3(Sass, Less), Bootstrap, JavaScript, DOM, jQuery, Ajax, JSON, ReactJS, AngularJS, Angular18** and **JSP.**
- Experience in MVC client-side JavaScript frameworks **AngularJS, EXTJS, Ember JS** and **Backbone JS.**
- Experience in MVVM client-side **JavaScript** frameworks such as **Angular18.**
- Proficient with **Typescript ES6** new features **block scope, type restrictions, decorators, arrow functions, classes, interfaces, modules (import and exports).**
- Profound experience in Core Java 8, 17 & 21 features like **multi-threading, concurrency, Stream's and Filters API, Lambda functions, Pattern Matching, String Templates** and **Functional interface** programming.
- Expertise in implementation of **J2EE Technologies: JSP, JTS, Servlets, JSF, JSTL, EJB transaction implementation, JMS, Struts2.0, Swing, Hibernate, Java Beans, JDBC, XML, Web Services, JNDI, Swing, Serialization and Externalization.**
- Knowledge on developing applications using **Microservice, SOA** and **Monolithic architectures.**
- Extensively worked on **Spring life cycle** and its related modules like **Spring Core, Spring IOC, Spring AOP, Spring MVC, Spring Transaction Management, Spring Batch, Spring Cloud** and **Spring data.**
- Experience in developing web applications on **MVC** based frameworks like **Spring, Spring IOC, Spring Security, Spring Boot, Spring Cloud** and **Spring MVC.**
- Experience in building **LEAN applications** using **MongoDB, Express.JS, Angular-JS, Node-JS,** creating **RESTful Web services** with **Node-JS, Express-JS** and installing **client-side dependencies** using **Bower.**
- Developed the application using industry standard **design patterns** like **Singleton, Business Delegate, MVC** and **Factory Pattern** etc. for **re-usability.**
- Implemented security functionality for various projects using **Spring security, JAX-WS** for **SOAP security** and **Site minder (SSO).**
- Authenticated Users accessing **RESTful** services using **OAuth 2.0, OIDC** and **JWT (Jason Web token).**
- Experience in developing **Microservices** with **Spring Boot** and **Node.JS (Express.JS)**
- Experience in **XML** based implementing **SOAP services** using **JAX-WS** framework with **Apache CXF, Apache Axis2** and Documented with **WSDL.**
- Expertise knowledge in transactions frameworks like **Spring AOP, Java Transaction API(JTA), Spring Transaction Management (Propagation, Isolation, Rollback mechanism).**
- Experience in developing **persistence layer** using **ORM's (Object-Relational Mapping)** frameworks like **JPA, Hibernate, IBATIS** and **Spring Data.**
- Worked on various **Message queues** like **JMS** framework, **Rabbit-MQ, IBM-MQ** and **Active-MQ.**
- Proficient in **OOAD Technologies** developing **use cases, Activity Diagrams, Sequence Diagrams** and **Class Diagrams** using case tools like **Microsoft Visio** and **Rational Rose.**
- Experience in working with Relational Databases like **MySQL, Oracle12c/11g, SQL Server, DB2** and NoSQL databases like **MongoDB, Cassandra** and **CouchDB.**
- Experience in writing **PL/SQL scripts, Triggers, Stored Procedures, views** and **materialized view.**
- Working experience of application servers like **WebLogic, WebSphere, JBoss** and **Apache Tomcat.**
- Experienced in using Java based Logging utility with **Log4J.**
- Experience with automation tools like **Selenium** and **Cucumber.**
- Experience in deploying the applications using **Docker container services** and building **Continuous Integration (CI)** and **Deployment (CD) pipeline** using **Jenkins** with **GitHub.**
- Having experience with Cloud Computing Service environments like **Amazon Web services (AWS).**
- Managed **Amazon Web Services** like **EC2, S3 bucket, Elastic search, Auto-Scaling, Dynamo DB, Virtual Private Cloud (VPC)** through **AWS Console** and **API Integration.**
- Hands-on experience working with Continuous Integration (CI) build-automation tools such as **Maven, Gradle, Circle CI, Harness, Argo CD, SVN, CVS, Jenkins** and **Apache Ant.**

- Excellent communication, interpersonal and analytical skills and a highly motivated team player with the ability to work independently.

TECHNICAL SKILLS:

Languages	C, C++, Java 8, 17 & 21, J2EE, SQL, PL/SQL and Python
Enterprise Java	Java, J2EE, Swing, RMI, Sockets, JDBC, Servlets, JSP, JMS, Java Beans, JSTL, JSF, Struts, EJB, Spring, JTA, JNDI and JPA
Web/XML Technologies	HTML5, CSS3, JavaScript, jQuery, ReactJS, AngularJS, Angular18, BackboneJS, XML, XSD, XSL/XSLT, SAX/DOM, AJAX, JSON, DOJO and NodeJS.
Tools & Framework	Struts, Hibernate, Spring MVC, Spring Web Flow, Spring IOC, Spring AOP, JMS, JSF, Log4J, SOA, Jasper reports, Spring Boot, Spring Batch, Spring Security, Spring Data, Jersey, Micro services.
Web services	SOAP, RESTful, UDDI, WSDL, JAX-RPC, JAX-RS, JAX-WS, JAX-B, Micro services, Apache Axis and Apache CFX.
Web/App Servers	Web Sphere, WebLogic, Apache, Tomcat and JBoss.
Database	Oracle, SQL-Server, MySQL server, MS SQL, IBM DB2, MongoDB , Postgres and Cassandra
Development Tools	Eclipse, RAD, Spring Tool Suite (STS) and IntelliJ
O-R mapping	Hibernate, JPA and JTA
Testing Tools/ Others	JUnit, SoapUI, Postman, Putty, Rational Clear Quest, RTC, Load UI and JIRA
Version Control	GIT, CVS, SVN, Rational clear case and Star Team
Platforms	Windows, Win 2k Server, Sun Solaris and UNIX
Cloud Technologies	AWS (Amazon Web Services)

PROFESSIONAL EXPERIENCE:

Client: Wells Fargo, Connecticut, USA

Oct'2021 – Till date

Employer: Pioneer Consulting Services

Role: Full Stack Java Developer

Description: The project was related to equipment financing in Wells Fargo for developing platform with web services that acts as a common gateway for APIs from different existing systems like Product and Offer Management, Billing, Sales, etc. The Java web services act as a one stop shop for APIs for different Wells Fargo Asset Management APIs.

Roles & Responsibilities:

- Involved in Requirements gathering, Analysis, Design, Development and Testing of the application using **AGILE methodology (SCRUM)**.
- Developed the web interface using **HTML5, CSS3, JavaScript, jQuery, Ajax, ReactJS, NodeJS** and **Bootstrap**.
- Worked with **NPM** commands and using package. JSON for managing dependencies and dev-dependencies of Node.js applications.
- Developed various screens for the front end using **React16** and used various predefined components from **NPM (Node Package Manager)**.
- Auto-suggest service implementation using **Nodejs & Elastic Search**.
- Utilized **Java 17 & 21** features like **Record Patterns** to match values against the record type and resolving to respective variables of the instance, **Pattern matching** for advanced switch case labels and improving expressiveness, **Virtual Threads** which does not capture OS threads capture the thread for entire lifetime.
- All the functionality is implemented using **Spring IO/ Spring Boot, Hibernate ORM**. Implemented **Java EE** components using **Spring MVC, Spring IOC, Spring transactions** and **Spring security** modules.
- Called **REST web services** through **Angular services** to get **JSON Object** and modified the response object to display in UI.
- Experience in **Micro services** development using **Spring boot** and deployment in **Pivotal Cloud Foundry (PCF)**.

- Used **Struts** Framework in the application, which is based on **MVC design pattern**.
- Involved in writing **Spring Configuration XML** a file that contains declarations and business classes are wired-up to the frontend managed beans using **Spring IOC** pattern.
- Implemented the application using **Spring IOC, Spring MVC Framework, Spring Batch** and handled the **security** using **Spring Security**.
- Developed **REST API's** using **Spring MVC** and **Spring boot** hosted all **micro services** on **PCF**.
- Developed **RESTful** Web Services with **JAX-RS** using **Spring Boot** and **Micro Services Architecture**
- Implemented **Micro Services** using **Spring Boot, Spring Cloud, Spring Micro Services** and enabled discovery using Netflix Eureka Server.
- Sending requests and responses to **Microservices** through **REST/HTTP**.
- Involved in integrating **JAX-RS** into **Spring Boot** application.
- Developed the persistence layer using **Hibernate Framework**, created the **POJO** objects and mapped using **Hibernate annotations** and **Transaction Management**.
- Deployed **Spring Boot3.x** based **Micro Services Docker** container using **Amazon EC2** container services and using **AWS** admin console.
- Migrate Data from databases such as **MongoDB, SQL** and **Dynamo dB** to Amazon Redshift.
- Used Hibernate **ORM** tools which automate mapping between **IBM DB2 SQL** databases and objects in Java
- Deployed the Docker image of services building **Docker** file and build a continuous delivery pipeline for containers using **AWS Code Pipeline** and **Amazon ECS**.
- Designed and developed **DAO** layer with Hibernate standards, to access data from **SQL Server**.
- Implemented **JMS** for notifications and testing with **JUnit, Mock cases**. Wrote **JUNIT** Test cases for Spring Controllers and **Web Service Clients** in Service Layer using **Mockito**. **Single Page Application** development using **AngularJS**, backed by **MongoDB** and **NodeJS** Used **JIRA** for bug tracking, issue tracking and project management.
- Used **GIT** as source control management giving a huge speed advantage on centralized systems that must communicate with a server.

Environment: Agile (SCRUM), Java 17, HTML5, CSS3, JavaScript, jQuery, Ajax, Bootstrap, Angular18, AWS (Amazon web services), Micro-Services, Spring, MongoDB, Spring Batch, Spring Boot, Spring Security, Servlet, XML, GIT, JMS, JSP, Spring MVC, JDBC, JUnit, Maven, IBM WebSphere, Restful, Log4J, Java Server Pages, JIRA, Jenkins and STS.

Client: Airtel, Chennai, India

June'2016 – April'2017

Employer: Firstsource Solutions Private Ltd.

Role: Java/J2EE Developer

Description: Bharti Airtel Limited is an Indian multinational telecommunications company based in New Delhi. It operates in 18 countries across South Asia and Africa, as well as the Channel Islands. Currently, Airtel provides 5G, 4G and LTE Advanced services throughout India.

Roles & Responsibilities:

- Involved in the complete **SDLC** including design of System Architecture, development of System **Use Cases** based on the functional requirements.
- Involved in Daily Scrum (**Agile**) meetings, Sprint planning and estimation of the tasks for the user stories, participated in retrospective and presenting Demo at end of the sprint.
- Involved in developing **UI pages** using **HTML5, DHTML, XSL/XSLT, XHTML, DOM, CSS3, JSON, Angular2, JavaScript, jQuery, and Ajax**.
- Used **JavaScript, CSS, Bootstrap, and Angular** to create the interactive **user interface**.
- Developed **dynamic UI** using **Angular** and produced dynamic, interactive data visualizations using **JavaScript** library like **D3.js**.
- Created **Angular controllers, services** and used **Angular filters** for filter functionality in the **search box** and **integrator** functionalities.
- Developed the **application** under **Core Java, J2EE Architecture** using **REST, JBoss, Node.js, backbone.js, EXT JS, Spring, Struts, Hibernate, Servlets, Web logic, Swing, Agile, Eclipse, Jenkins, and JSP**.
- Customized **RESTful Web Service** using **Spring RESTful API**, sending **JSON** format data packets between front-end and middle-tier controller.
- Developed Unit and Integration tests for existing microservices by using Junit and Docker environments.

- Developed **REST** based **Micro services** using the **Spring Boot, Spring Data** with **JPA**.
- Used **Kafka** and **Kafka brokers**, initiated the spark context and processed live streaming information with RDD and Used **Kafka** to load data into **HDFS** and **NoSQL** databases.
- Worked on **Spark SQL** for joining multi hive tables and write them to a final hive table and stored them on **S3**.
- Created **Spark** jobs to do lightning speed analytics over the **spark** cluster.
- Evaluated **Spark's** performance vs Impala on transactional data. Used **Spark** transformations and aggregations to perform min, max and average on transactional data.
- Called **REST web services** through **Angular** services to get **JSON** Object and modified the response object to display in UI.
- Developed **API** to Integrate with **Amazon EC2** cloud-based architecture in **AWS**, including creating machine Images.
- Developed **Mean Stack** from scratch including **Mongo DB** server (Mongoose Connector) setup and **Express JS** server development.
- Extensively worked on **ES6** new features such as Arrow **functions, Classes, Iterators**, and **Generators**.
- Involved in deploying systems on **Amazon Web Services** Infrastructure services **EC2, S3**.
- Developed API to Integrate with **Amazon EC2** cloud-based architecture in **AWS**, including creating machine Images.
- Implemented client-side application to invoke **SOAP** and **Restful Web Services**.
- Implemented the **online application** using **Core Java, JavaScript, JDBC, JSP, Servlets, Spring, Hibernate, Web Services**.
- Worked on **Eclipse** for development and deployment of application in **Web Logic** Application Server.
- Extensively used **JSON** to parse the data from server side to satisfy the business requirement.
- Developed unit and integration tests for existing microservices using **JUnit, Mockito** and **Docker** environments.
- Involved in installing and configuring **Maven** for application builds and deployment.
- Configured and customized logs using **Log4J** and Used **GIT** as a version control tool.
- Used **JIRA** to assign, track, report and audit the issues in the application.
- setup the **CI** and **CD** process for the application using the **Jenkins**.

Environment: Agile (SCRUM), HTML5, CSS3, JavaScript, Bootstrap, AngularJS, jQuery, AJAX, Hibernate, Spring, Struts, MongoDB, Spring Boot, Spring Security, Servlet, JSON XML, GIT, Spring MVC, JUnit, Maven, WebSphere, Restful, JAX-RS, Log4J, AWS (Amazon Web services), Microservices, JIRA, Jenkins, JMeter, GIT, Maven.

Client: ICICI Bank, Chennai, India

Nov'2014 – Feb'2016

Employer: Sutherland Global Services

Role: Java Developer

Description: ICICI Bank Limited is an Indian multinational bank and financial services company headquartered in Mumbai with a registered office in Vadodara. It offers a wide range of banking and financial services for corporate and retail customers through various delivery channels and specialized subsidiaries in the areas of investment banking, life, non-life insurance, venture capital and asset management.

Roles & Responsibilities:

- Involved in **SDLC requirements gathering, analysis, design, development and testing** of application developed using **Agile** methodology.
- Created user-friendly GUI interface and Web pages using **HTML, jQuery, Ajax** and **Java script**.
- Used **Spring MVC** and **Dependency Injection** for handling presentation and business logic.
- To maintain loose coupling between layers published the business layer as services and injected the necessary dependent components using **Spring IOC** and published cross cutting concerns like Logging, User Interface exceptions, Transactions using **Spring AOP**.
- Integrated **Spring DAO** for data access using Hibernate.
- Used **Spring Security** for **Authentication** and **Authorization** of the application.
- Implemented persistence framework using **Hibernate** & Handled **Transaction Management** using the provided data source.
- Extensively used **JSON** to parse the data from server side to satisfy the business requirement.
- Responsible for designing **Hibernate mapping files** based on business logic and Object relationships.

- Integrated **Spring and Hibernate** together and worked on developing backend components and services using Hibernate and spring.
- Extensively used **HQL** and **SQL** for querying databases.
- Developed **Message Driven Bean** for asynchronous sending Messages using **JMS**.
- Consumed **Web Services** to interact with other external interfaces in order to exchange the data in different forms by using **RESTful** service.
- Used **Spring JMS** module for lookup for the queues and MDBs for the listeners
- Established Database Connectivity using **JDBC, Hibernate O/R mapping with Spring ORM** for **Oracle**.
- Packaged and deployed the application in **IBM WebSphere**.
- Written **LINUX** shell scripts to identify user login information.
- Designed and developed Node.JS Application using Single Page Application Architecture.
- Used **Log4J** for application logging and notification tracing mechanisms.
- Used **Maven** tools for building and deploying the Web applications.
- Used Mule ESB for compatibility among the applications already developed.
- Analysis and Bug fixing of the production problems and defects along with enhancements
- Implemented **JUNIT** test cases for unit testing and Suites for end-to-end testing.
- Used **JIRA** for tracking the **Project Stories** in Agile Methodology.
- Used **Tortoise SVN** to maintain the version of the files and took the responsibility to do the code merges from branch to trunk and creating new branch when new feature implementation starts.

Environment: Agile methodology, Java, HTML, CSS, AngularJS, Node.JS, JSON, XML, AJAX, jQuery, Struts, Hibernate, Spring MVC, RESTful, HQL, SQL, IBM WebSphere Server, Oracle, JMS, JNDI, Maven, RMI, Eclipse IDE, UML, JIRA, Tortoise SVN, LINUX.
