

**Nikhil K**

**Sr Full Stack Java Developer**

**AWS Certified Developer Associate**

**PEGA Certified System & Senior System Architect**

**Email: ssnikhilk666@gmail.com**

**Mobile: 8328003377**

## PROFESSIONAL SUMMARY

Senior Full-Stack Java Developer with **7 years** of experience in designing scalable **microservices** and **web applications** using **Java 8+, Spring Boot, ReactJS, and Angular**. Proficient in building **RESTful APIs**, optimizing **database operations**, and ensuring **system reliability**. Skilled in **object-oriented programming, concurrency, and memory management**, with hands-on experience in **DevOps integration, CI/CD pipelines, and cloud platforms like AWS and Azure**. Adept at collaborating in **Agile environments**, driving projects to completion, and delivering high-quality, performance-driven solutions.

- Expert in **Java (8+)** with strong proficiency in object-oriented programming (OOP), memory management, concurrency, error handling, generics, serialization/deserialization, and multi-threading.
- Full-stack development expertise in **Angular, React, Redux, Node.js, React Native, JavaScript (ES6+), TypeScript** with a focus on building responsive and dynamic Single Page Applications (SPA).
- Experienced in backend and API development using **Spring Boot, Spring MVC, Spring Security, Spring WebFlux, Spring Data, Hibernate, JPA, JDBC**, and RESTful/SOAP Web Services.
- Proficient in designing and developing microservices-based architectures using **Spring Boot, Node.js (Express.js)**, and Service-Oriented Architecture (SOA) with RESTful APIs, SOAP.
- Strong database expertise in **PostgreSQL, MySQL, Oracle, MS SQL Server**, and NoSQL databases (**MongoDB, Cassandra, Redis**) with experience in PL/SQL, indexing, query optimization, and stored procedures.
- Expert in DevOps and CI/CD pipelines, implementing **Docker, Kubernetes, Jenkins, Azure DevOps, GitHub Actions** for automated deployments across cloud and on-premises environments.
- Hands-on experience in cloud computing with AWS (Certified AWS Developer), working with **EC2, S3, RDS, Route 53, ELB, IAM, CloudWatch, SNS, and SQS**; also proficient in Azure Cloud Services including **App Services, Functions, Active Directory, Key Vault, and Resource Manager**.
- Extensive testing and quality assurance experience, writing unit, integration, and performance tests using **JUnit, Mockito, Selenium, JMeter** and analyzed code quality using **SonarQube, Checkmarx, and BlackDuck**.
- Expert in logging, debugging, and monitoring with **Log4j, ELK Stack (Elasticsearch, Logstash, Kibana), DataDog, Zipkin, Dynatrace, Grafana** and **Splunk** for distributed system observability.
- Proficient in message-driven architectures utilizing **Apache Kafka** and **RabbitMQ** for event-driven and real-time data streaming applications.
- Version control and collaboration expertise with **Git, GitHub** ensuring effective team-based development.
- Certified **System Architect** and **Senior System Architect** in **Pega** with hands-on experience in workflow automation and enterprise BPM solutions.
- Proactive and organized individual with strong analytical skills, exceptional communication and teamwork abilities, and excellent time-management. Outstanding problem-solving, presentation, and debugging skills.

| <b>Databases</b>                        | PostgreSQL, MySQL, MongoDB, Cassandra, Oracle Database, MS SQL Server,                                                            |
| <b>Testing &amp; Code Quality:</b>      | JUnit, Mockito, Jest, Selenium, TestNG, JMeter, SonarQube, Veracode, Checkmarx                                                    |
| <b>Monitoring &amp; Logging:</b>        | ELK Stack (Elasticsearch, Logstash, Kibana), Splunk, Grafana, Dynatrace Logback,                                                  |
| <b>Build &amp; Automation Tools:</b>    | Maven, Gradle                                                                                                                     |
| <b>Project Management/Ticketing:</b>    | JIRA, ServiceNow                                                                                                                  |
| <b>Virtualization/Containerization:</b> | Docker, Kubernetes                                                                                                                |

## TECHNICAL SKILLS:

## PROFESSIONAL EXPERIENCE:

**Client:** Sherwin Williams, Cleveland, OH

**July 2023 – Present**

**Role:** Senior Microservices Developer

### Responsibilities:

- Created scalable microservices architecture using Java **Spring WebFlux**, and reactive programming for higher concurrency and responsiveness to handle high data streams efficiently.
- Developed and integrated **RESTful APIs** for work orders and inventory management in a supply chain execution module, using **Spring WebClient** with **Oracle SaaS**.
- Developed microservices using Domain-Driven Design (DDD) architectural patterns (**Factory and Builder**) to model the services based on business domains for modularity and maintainability.
- Implemented secure communication between microservices using **OAuth2** and **JWT**, ensuring strong authentication and authorization policies with **Spring Security** to protect sensitive data and application resources.
- Designed and implemented **OAuth2 token caching** in a microservices environment, reducing API authentication overhead and improving response times.
- Deployed microservices on **Azure Kubernetes Service (AKS)**, enabling automatic scaling and improving resource efficiency during high traffic periods.
- Optimized **CI/CD workflows** by integrating **Argo CD** with **GitHub Actions**, enabling seamless deployment from code commit to production.
- Enhanced error handling using global annotations in Spring WebFlux, significantly reducing system downtime during failure scenarios.

- Designed and optimized relational database schemas in **MS SQL Server**, ensuring efficient data storage and query performance.
- Integrated **MS SQL Server** with microservices using **Spring Data JPA**.
- Implemented connection pooling using **Reactor Netty** to optimize resource usage and reduce connection overload for high-concurrency RESTful API calls to Oracle SaaS.
- Designed and implemented unit and integration tests using **JUnit**, **Mockito**, and **Spring Test** framework to validate the microservice functionality and ensure the reliability and stability of the microservice in production scenarios.
- Monitored system performance using **OpenTelemetry** integrated with **Dynatrace** and **Grafana**, setting up comprehensive monitoring.
- Exposed APIs through Azure API Management (**APIM**) with policies for rate limiting, authentication, and CORS, ensuring secure and regulated access to services.
- Integrated microservices with **Power Apps custom connectors**, enabling the development of dynamic applications for business workflows and improving organizational productivity.
- Configured **SonarLint** for local development environments, enabling early detection of issues before committing code.
- Streamlined debugging and troubleshooting processes by configuring **Log4j** for effective logging, ensuring system stability in both development and production environments.

**Environment:** Java, Spring JPA, Spring WebFlux, Spring Security, WebClient, AKS, APIM Gateway, Dynatrace, Grafana

**Client:** Wolters Kluwer, Houston, TX

**April 2022 – July 2023**

**Role:** Senior Full Stack Java Developer

#### **Responsibilities:**

- Designed and developed web applications using **JavaScript** and **ReactJS** and created reusable UI components for seamless integration into large-scale projects.
- Implemented **React Router** for client-side routing and navigation in single-page applications and managed component-level state using React hooks and global-level state management with React Redux.
- Developed cross-platform mobile apps using **React Native** with the same codebase as React web apps. Utilized Axios for smooth navigation and API integration.
- Developed a responsive, scalable backend process using **Spring WebFlux** to improve system responsiveness to concurrent events to handle asynchronous data flows.
- Developed and implemented RESTful APIs to manage dynamic application workflows, ensuring easy data retrieval and storage by using **MongoDB** as the database.
- Implemented CRUD functionality with Spring WebFlux and MongoDB, which ensured efficient and simple data processing in a reactive programming model.
- Implemented security authentication and authorization through **Spring Security** and JWT, ensuring granular access control and protection of application resources.
- Created unit tests for Spring components, including controllers, services, and repositories using **JUnit** and **Mockito**.
- Created **Docker** images for each microservice, defined required configuration, dependencies, and environment variables and created Docker Compose files to define and configure multiple microservices to be deployed as an integrated application stack.
- Developed **Kafka** producers and consumers in microservices to enable efficient and reliable message exchange and event streaming.
- Conducted ongoing code quality assessments using **SonarQube**, identified and managed technical costs and provided improved code management.
- Established security groups and implemented firewall rules to control outbound traffic in **EC2** instances and auto-scaling groups to automatically scale the number of EC2 instances based on traffic requirements, check availability and cost if it's a good one

- AWS **S3** buckets are configured to store and manage non-stationary assets and implement access controls to protect critical data.
- Automated infrastructure actions with **CloudWatch** Events that scale EC2 instances by triggering Lambda functions.

**Environment:** ReactJS, Spring WebFlux, MongoDB, SonarQube, JUnit, Git, Docker, Kubernetes, AWS EC2, S3, CloudWatch.

**Client:** General Services Administration, Washington, D.C.

**Sep 2021-April 2022**

**Role:** Senior Full Stack Developer

#### Responsibilities:

- Developed and maintained Single-Page Applications (**SPA**) using **Angular**, leveraging components, directives, services, and modules in **TypeScript** to create scalable and modular front-end architectures.
- Implemented Angular routing and lazy loading to optimize performance efficiently manage navigation between views and components.
- Integrated third-party libraries and components into Angular projects, such as Bootstrap, Material UI, NgRx for state management and UI enhancement.
- Utilized TypeScript's ES6/ES7 features like async/await, arrow functions, and modules to write clean and concise code in Angular applications.
- Created and deployed server-side applications using **Node.js** building RESTful APIs and handling JSON data effectively.
- Designed and managed relational databases in **PostgreSQL**, defining models, migrations, and query methods for efficient data storage and retrieval.
- Optimized database interactions by configuring **Connection Pooling**, ensuring efficient use of database connections in high-concurrency scenarios.
- Enhanced application security by implementing **OAuth2-based authorization** and enabling role-based access control.
- Configured CORS policies in Express.js to control cross-origin requests and enhance the security of API endpoints.
- Developed custom exception handling using **@ControllerAdvice** and **@ExceptionHandler**, providing detailed error responses and improving API usability.
- Developed unit and integration tests for Node.js modules and angular components using **Jest, Mocha, and Chai**, ensuring high code quality and application stability
- Implemented **SonarQube** for static code analysis, identifying bugs, code smells, and security vulnerabilities.
- Utilized **log aggregation** tools or services like ELK Stack (Elasticsearch, Logstash, Kibana) to centralize and analyze log data from Node.js microservices.
- Deployed and monitored applications in **Azure Cloud** by configuring **CI/CD pipelines in Azure DevOps**, automating builds, testing, and deployments for **Node.js and Angular applications**.

**Environment:** Angular, TypeScript, Node.js, PostgreSQL, Jest, Azure DevOps, OAuth2, ELK Stack, RESTful Web Services

**Client:** REPLICON, Redwood City, California

**Dec 2020-July 2021**

**Role:** Full Stack Java Developer

#### Responsibilities:

- Involved in various phases of Software Development Life Cycle (**SDLC**), which includes requirement gathering, modeling, evaluation, architecture layout, prototyping, growing and testing.
- Worked on **Angular** framework for building a web application and have used **Angular Material** to improve the user interface and to enhance the users experience, optimizing the performance.
- Implemented state management using NgRx for efficient data flow and state synchronization between components.

- Developed web applications using the Model-View-Controller (MVC) model with **Spring MVC** and implemented security user authentication and authorization workflows using Spring Security.
- Developed RESTful APIs using Spring MVC, developed endpoints to process HTTP requests, manage data in JSON format, and implement features such as form provisioning, data retrieval, and real-time updates
- Improved API performance by paging and scheduling RESTful APIs using **Spring Data JPA**, enabling better management of big data.
- Configured **Spring Profiles** for environment-specific properties, ensuring easy use across development, staging and production environments.
- Designed and optimized database schemas, tables, and indexes in **PostgreSQL** ensuring data storage efficiency, and improving query performance.
- Implemented **Zendesk** for customer support and service management and configured Zendesk such as setting up ticket forms, macros, and triggers.
- Implemented real-time application monitoring and observability using AppDynamics (APM) and AWS CloudWatch Logs, tracking performance bottlenecks and debugging production issues.
- Implemented **unit testing** for Spring applications with Angular using testing frameworks like Junit and Jasmine.
- Deployed and containerized microservices using **Docker and Kubernetes**, improving scalability and fault tolerance in **cloud environments**.
- Integrated AWS S3 for storage and retrieval of static assets, such as images, documents, and backups, leveraging pre-signed URLs for secure access.

**Environment:** Angular, OracleDB, Spring Framework, JPA, Hibernate, GitHub, Zendesk, Kubernetes, AWS

**Client:** KPi-Tech Services, Hyderabad India

**Jan 2019-Dec 2020**

**Role:** Full Stack Developer

#### Responsibilities:

- Developed single-page applications using **React.js**, focusing on performance and scalability and utilizing popular libraries and frameworks like **Redux** and **React Router**.
- Implemented **React hooks**, including **useState** and **useEffect**, for managing state and side effects in functional components.
- Developed and maintained **RESTful APIs** using **Express.js** and **Node.js** and integrated with various databases.
- Implemented asynchronous code using callbacks, promises, and async/await in Node.js applications.
- Created stored procedures and triggers using **Oracle SQL/PLSQL** and modified, created, and optimized database structures using **Oracle DB** for better performance.
- Created and maintained Git repositories in **Bitbucket** for individual projects, ensuring proper branching, merging, and versioning of code changes.
- Configured **Log4j** with different log levels (e.g., INFO, DEBUG, ERROR) to capture relevant information and facilitate troubleshooting and debugging.
- Developed unit tests for Node.js backend components, including APIs, middleware, and utility functions, using testing frameworks like Jest or Mocha.
- Configured **Jira Service Desk** as a service management platform to manage customer requests and incidents and implemented Jira Service Desk to create and manage service requests, incidents, and problem records.

**Environment:** ReactJS, Node.js, Express.js, Oracle PLSQL/SQL, BitBucket, Jira, Log4J, Hibernate, Junit

**Client:** Spring Logix Software Private Limited, Hyderabad, India

**Feb 2018-Jan 2019**

**Role:** Pega Developer

**Responsibilities:**

- Integrated **Pega** with external systems using **Connect SQL, Connect SOAP, and Service SOAP**, proficient in **PRPC** user interface development, coding PRPC activities and rules using sections, harnesses, flows, flow actions, and assignments, following PEGA guardrails.
- Integrated Pega with **JSP** and **Servlets** to seamlessly combine Pega's powerful BPM features with custom frontend interfaces and server-side logic.
- Developed JSP pages and Servlets to handle dynamic content generation and server-side processing, working in conjunction with Pega for data retrieval and business logic execution.
- Worked on **DB2** commands and utilities for database maintenance, backup, and recovery, and used DB2 performance monitoring and tuning techniques.
- Integrated **Jenkins** with **Pega** to streamline the build and deployment process and utilized Jenkins plugins and tools to enhance Pega development and deployment workflows.
- Configured **log4j** in integration of **PEGA** Applications, including log4j's architecture and components such as Appenders, Layouts, and Loggers.
- Implemented testing strategies and methodologies for Pega applications, including **unit, integration, and end-to-end testing**.
- Worked on **JavaScript** for customizing the user interface and creating custom validation rules in Pega.
- Managed and organized customer interactions and inquiries using **Zoho Desk** and used Zoho Desk's features such as ticket management, automation, and self-service portals.

**Environment:** PEGA, PRPC, JavaScript, JSP, Servlets, SOAP, Hibernate, DB2, Jenkins, Log4J, ZohoDesk, CRM.
