Education

University Of North Carolina || GPA 3.9

Aug 2023 - Dec 2024

Master of Science, Information Technology

Gokaraju Rangaraju Institute of Engineering and Technology

Sep 2013 -May 2017

Bachelor of Technology, Electrical and Electronics Engineering

Technical Skills

Programming Languages: Java, C++, C, JavaScript, MySQL, HTML, CSS, Python

Database: MySQL, Oracle, Cloud Fire store, MongoDB

Unit Testing/ Methodologies: Junit, SonarQube, Agile, Scrum

Tools/IDE: Microsoft Excel, Jira, Firebase, Jenkins, Postman, Swagger, VS Code, IntelliJ, Linux, Android Studio

Frameworks: Spring, Spring Boot, Angular, Express, Node.js

Software Development Processes: Build Processes, Operations Experience, Software Development Life Cycle, Coding Standards, Code Reviews, Source Control Management, Testing

Design and Architecture: Design Patterns, System Architecture

Cloud Platforms: AWS (Elastic Cache, IAM, S3, VPC)

DevOps Tools: Jenkins, Git, Splunk, SonarQube, Docker, Kubernetes

Work Experience

Company: Mphasis Ltd, India.

Nov 2020 – Aug 2023

Client: JP Morgan Chase

Role: Software Engineer

- Led requirement gathering, design, and development phases for the application lifecycle, successfully deploying the project on schedule for 5 major modules.
- Developed a robust Data Migration application that outperformed FTP/SCP transfer speeds by 10-100x under various network conditions.
- Developed REST APIs and architected 16 microservices using Java, Servlets, Spring Boot, and JPA in an Agile-Scrum environment, ensuring seamless handling of over 5 million rows of data with zero defects.
- Built a modular back-end using Spring Core Framework with MVC architecture, leveraging Dependency Injection (DI), Aspect-Oriented Programming (AOP), and Transaction management.
- Developed and integrated a persistence layer using Hibernate for seamless database interaction, ensuring efficient data operations and which improved data retrieval efficiency by 25%.
- Created a dynamic and responsive user interface using Angular 10, HTML5, and CSS3, including Single Page Application (SPA) features and reusable components.
- Architected Jenkins and CI/CD pipelines for all backend APIs, minimizing deployment time by 60% and ensuring code quality.
- Implemented standard authentication techniques, including ADFS, to secure backend services, enhancing data integrity and reducing security incidents by 40%.
- Facilitated daily stand-up meetings in the absence of the Lead for a team of 15, tracking progress, assigning tasks, and maintaining high-quality standards for deliverables.
- Engineered and optimized over 15 PL/SQL stored procedures and functions, resulting in a 40% improvement in query performance and reducing average response time to under 2 seconds for critical database operations.
- **Containerized** and deployed microservices using **Docker** and **Kubernetes**, enhancing system scalability and reducing deployment time by 50%
- Consistently met aggressive release cycles by optimizing development workflows and ensuring rigorous CI/CD automation.

Fellowship at BridgeLabz Solutions LLP

April 2020 - October 2020

- Java: Single-handedly developed Quantity Measurement, Address Book, Employee Wage, IPL Analyzer, Cab Invoice Generator, and Census-Analyzer App using Java 8 features, Regular Expression, MySQL, and JUnit approach.
- C++: Designed and implemented a Chat Application using TCP/IP socket programming and MongoDB, achieving 100% message delivery accuracy and supporting real-time communication for up to 50 concurrent users.

Academic Projects

Trekking Events Management Web Application

Jan 2024 - Apr 2024

- Developed and launched a web application that successfully managed over 100+ monthly trekking events, streamlining organization and participant registration processes.
- Implemented robust user authentication with cookies and session management, enhancing security for 500+ registered users.
- Engineered server-side components using Node.js and Express, with a MongoDB database integration that dynamically handled thousands of event and user data transactions.
- Created a responsive and intuitive front-end using HTML, CSS, and JavaScript, which improved user interaction scores by 40% and ensured system reliability across multiple devices.
- Introduced features such as event creation, editing, and management, which boosted operational efficiency by 30% and significantly enhanced user engagement.

Electronic Medical Records System

Jan 2024 - Apr 2024

- Spearheaded the transition of a healthcare system from paper-based to digital records, enhancing data accessibility and improving patient care efficiency across multiple facilities.
- Designed and implemented a robust SQL database schema, securely managing over 100,000 patient records and ensuring full compliance with stringent healthcare privacy regulations.
- Developed complex backend logic and structured 16 relational tables (e.g., Patient Information, Medical Provider, Visit Records) to support dynamic data management and querying, achieving a 40% reduction in data retrieval times.

Pizza Hub Account Management System - Mobile Application

Aug 2023 - Nov 2023

- Developed a mobile application for Pizza Hub using Java, Firestore, and Firebase, which streamlined the pizza ordering process for users.
- Integrated features such as user registration, authentication, pizza selection, customization, and order confirmation, resulting in a 40% increase in user engagement.
- Leveraged Firebase for real-time database management and user authentication, ensuring data security and achieving a 25% improvement in data handling efficiency.
