

PROFESSIONAL SUMMARY:

- 8+ years of experience in **Java Full Stack Development** with expertise in designing and implementing scalable web applications.
- Strong proficiency in **Java, J2EE, Spring Boot, Spring MVC, Hibernate, and JPA** for backend development.
- Expertise in **ReactJS, Redux, AngularJS, JavaScript (ES6+), TypeScript, HTML5, CSS3, Bootstrap, and Material-UI** for modern UI development.
- Developed and integrated **RESTful APIs** using **Spring Boot, JAX-RS, and Jersey** for microservices-based architectures.
- Designed and implemented **multi-tenant architectures** to support SaaS-based applications with **Spring Boot** and **Hibernate**.
- Experience in **microservices development** and containerization using **Docker and Kubernetes**.
- Strong database management skills with **Oracle, MySQL, PostgreSQL, MongoDB, and DynamoDB**.
- Implemented **PL/SQL stored procedures, triggers, functions, and complex SQL queries** for optimized database interactions.
- Built **serverless applications** using **AWS Lambda, Step Functions, and DynamoDB** for cost-effective and scalable solutions.
- Hands-on experience in **AWS services** including **EC2, S3, RDS, Lambda, API Gateway, SQS, and CloudWatch**.
- Worked on **serverless architecture** with **AWS Lambda** for event-driven processing.
- Configured **Kafka, RabbitMQ, and JMS** for real-time data streaming and asynchronous messaging.
- Implemented **OAuth2, JWT authentication, and Spring Security** for secure application access.
- Experience in **CI/CD automation** using **Jenkins, GitHub Actions, and Bitbucket Pipelines**.
- Developed **OAuth2 and OpenID Connect authentication mechanisms** for securing APIs and enabling Single Sign-On (SSO).
- Developed and maintained **Terraform and AWS CloudFormation** scripts for cloud infrastructure provisioning.
- Excellent understanding of Object-Oriented design methodology and Core Java concepts such as multi-threading, exception handling, generics, annotations, collections, and I/O.
- Provided support and configuration services of IP data networks on a continuous basis.
- Expertise in **Agile/Scrum methodologies**, including **Sprint Planning, Daily Standups, and Sprint Retrospectives**.
- Developed **multi-threaded applications** with **Java Concurrency API** for performance optimization.
- Integrated third-party APIs and services with **Postman, Swagger, and RESTful web services**.
- Experience in **test-driven development (TDD)** using **JUnit, Mockito, and Selenium**.
- Worked on **cross-browser compatibility** and UI responsiveness using **CSS media queries and Bootstrap**.
- Strong understanding of **event-driven architecture**, implementing **Kafka topics and consumer groups**.
- Developed **event-driven microservices** using **Kafka Streams, Kinesis, and RabbitMQ** to handle large-scale data processing.
- Developed **batch processing applications** using **Spring Batch** for handling large data loads.
- Expertise in logging and monitoring using **Log4j, Splunk, and AWS CloudWatch**.
- Supported **production and non-production environments**, including **on-call rotation** for issue resolution.
- Strong experience in **performance tuning, debugging, and troubleshooting production issues**.
- Built and managed **Docker containers** to deploy applications in isolated environments.
- Worked on **API Gateway** for routing and managing API requests securely.
- Experience in **NoSQL databases** like **MongoDB and DynamoDB**, implementing CRUD operations.
- Automated infrastructure provisioning with **Terraform and AWS CloudFormation**.
- Implemented **Kafka Streams** for processing real-time data pipelines.
- Used **Redis for caching** to improve application performance and scalability.
- Experience in **front-end state management** with **Redux and Context API**.

- Integrated **OAuth authentication** for single sign-on (SSO) solutions.
- Expertise in **service discovery and load balancing** with **Netflix Eureka, Ribbon, and Hystrix**.
- Built and deployed **microservices using Spring Boot**, ensuring scalability and fault tolerance.
- Experience with **Git, JIRA, and Bitbucket** for version control and project tracking.
- Passionate about **learning new technologies** and optimizing application performance
- Implemented Spring boot microservices to process the messages into the Kafka cluster setup.
- Experience in Kibana and Elastic search to identify the Kafka message failure scenarios
- Proven experience in Integrated Development Environments (IDE) such as Eclipse, Net Beans, and RAD.
- Experience in design, development, and implementation of **Model-View-Controller (MVC-2)** architecture, **IOC, AOP (Aspect Oriented Programming), DAO (Data Access Object)** using **Spring Framework**
- Experience in building tools like **Ant & Maven**, and logging with **Log4j**.
- Worked in both **Unix/Linux** and Windows-based development environments.
- Good programming and debugging skills in Unix **Shell Scripting**.
- Good Experience in PowerShell to automate tasks.

TECHNICAL SKILLS:

Programming	Java, J2EE (JSP, Servlets, JSTL), Java/JDK, J2SE, JavaScript (ES6+), TypeScript
Scripting	jQuery, JavaScript, PowerShell
Frameworks	Spring (Spring Boot, Spring MVC, Spring Security, Spring Batch, Spring AOP), Hibernate, Apache Kafka, EJB, JPA
IDE	Eclipse, IntelliJ, NetBeans, Visual Studio Code
Web Technologies	HTML5, CSS3, Bootstrap, Material-UI, ReactJS, Redux, AngularJS, AJAX, XML, Web Services, REST APIs, SOAP
Web Servers	Apache Tomcat, JBoss, Apache
Databases	Oracle, MySQL, PostgreSQL, SQL Server, MongoDB, DynamoDB, Cassandra, PL/SQL
Database Tools	SQL Developer, MSSQL Server Management Studio
Reporting Tools	Jasper Reports
Build Tools	Gradle, Maven, ANT
Other Tools	JIRA, Confluence, Sonar, Jenkins, Swagger, Postman, Rational Rose, Hystrix Dashboard, Netflix Ribbon
Version Control	Git, git bucket
Operating Systems	Windows (XP, 7, 8/8.1, 10), Linux, Unix

PROFESSIONAL EXPERIENCE:

Client: Ahold Delhaize, Dallas, TX
Role: Java Full Stack Developer

April 2024 - Till Date

Responsibilities:

- Designed and developed **ReactJS components** with state management using **Redux** to build scalable and interactive web applications.
- Implemented **React Router** for efficient navigation and dynamic routing.
- Consumed **RESTful APIs** from a **Spring Boot orchestration layer**, dynamically fetching and displaying JSON data in the UI.

- Integrated **Bootstrap, Material-UI, and Styled Components** to enhance the user experience.
- Developed **RESTful web services** using **Spring Boot, JAX-RS, and Jersey**, ensuring high performance, scalability, and security.
- Configured **Spring Interceptors** for **transaction management, security, audit logging, and application logging** using Log4j/SLF4J.
- **Designed and developed scalable microservices architecture** using Spring Boot and Docker, ensuring high availability and fault tolerance.
- Implemented **Java multi-threading, synchronization, and Java Mail API** for handling concurrent product model uploads.
- **Developed and optimized asynchronous processing** using Kafka, RabbitMQ, and JMS, reducing system latency and improving message throughput.
- **Enhanced application security** by implementing OAuth2, JWT authentication, and role-based access control (RBAC) using Spring Security.
- Built and deployed **Kafka Producer and Consumer applications**, working with multiple Kafka topics for asynchronous messaging.
- Integrated **Kafka, JMS, and RabbitMQ** for **event-driven architecture and asynchronous messaging**.
- Designed and optimized **SQL queries, PL/SQL stored procedures, triggers, and packages** for **Oracle Database**.
- Managed **DynamoDB collections and CRUD operations**, optimizing data retrieval using **DynamoDB Streams**.
- **Implemented advanced database indexing and query optimization techniques** in PostgreSQL and Oracle, improving query execution time by 40%.
- Worked with **AWS services** including **EC2, S3, RDS, Lambda, CloudWatch, API Gateway, and SQS** to build a **scalable and resilient cloud architecture**.
- **Automated performance monitoring and alerting** using AWS CloudWatch, ELK stack, and Prometheus to ensure system reliability and quick issue resolution.
- **Automated infrastructure provisioning using Terraform and AWS CloudFormation**.
- Developed and managed **Docker containers** for deploying microservices in **Kubernetes** environments.
- Configured and optimized **CI/CD pipelines using Jenkins and GitHub Actions** for automated builds, testing, and deployments.
- Implemented **REST API security** using **OAuth2, JWT authentication, and Spring Security**.
- Investigated and resolved **production issues**, performed **log analysis**, and applied **hotfixes** to maintain seamless application performance.
- Assisted QA teams in writing **test cases** and debugging defects, ensuring high test coverage with **JUnit, Mockito, and Selenium**.
- Actively participated in **Sprint Planning, Daily Standups, and Sprint Retrospectives** in an **Agile SCRUM** environment.
- Provided **on-call production support**, troubleshooting application issues, and ensuring system uptime.

Environment: ReactJS, Redux, JavaScript (ES6+), TypeScript, HTML5, CSS3, Bootstrap, Material-UI, Java, J2EE, Spring Boot, Spring MVC, Spring Security, Hibernate, REST APIs, Microservices, Oracle, MySQL, PostgreSQL, MongoDB, DynamoDB, PL/SQL, AWS (EC2, S3, RDS, Lambda, CloudWatch, API Gateway, SQS), Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, Kafka, RabbitMQ, JMS, Redis, Mockito, Selenium, Log4j, Postman, Git, JIRA, Bitbucket, Maven.

Client: Citizens Bank, Johnston, RI

Aug 2023 - March 2024

Role: Java Full Stack Developer

Responsibilities:

- Worked in a highly dynamic **AGILE environment**, actively participating in **Scrum and Sprint meetings** to ensure timely delivery of banking solutions.
- Developed **front-end applications** from scratch using **HTML5, CSS3, JavaScript, jQuery, Bootstrap, AngularJS, and Node.js** to enhance banking user interfaces.
- Configured and executed **Gulp tasks** in the **Node.js runtime** for **CSS pre-processing, minification, testing, and build synchronization**.

- Developed **custom directives, factories, and services** in **AngularJS**, implementing **best coding practices** for secure and scalable banking applications.
- Created **AngularJS controllers** to isolate scopes and perform **UI operations**, extensively utilizing **Core Java (Exceptions, Collections, Streams, Lambda expressions)**.
- Designed and implemented **RESTful web services** using **Spring Boot, Jersey, JAX-RS, and Node.js** for secure and efficient banking transactions.
- Integrated **REST APIs** with **AngularJS** for **real-time data retrieval and UI rendering**, leveraging **AJAX and JSON parsing**.
- Developed **microservices-based architecture** using **Spring Boot and Hibernate**, ensuring modular, scalable, and resilient banking applications.
- Implemented **Spring MVC** to create and configure **Java beans** using **Spring IoC**, streamlining application development.
- Utilized **Spring Security and OAuth1/2** for **authentication and authorization**, ensuring compliance with financial security standards.
- Designed and developed **frameworks** to consume **web services** hosted on **AWS EC2 instances** for cloud-based banking solutions.
- Implemented error handling mechanisms in **PL/SQL stored procedures** to ensure data integrity and minimize system downtime.
- Worked with **AWS services** like **EC2, S3, RDS, Lambda, SQS, and CloudWatch** for **deployment, monitoring, and maintenance** of banking applications.
- Configured **AWS Glacier** for **data archiving** and managed **custom policies** to enhance security and compliance.
- Used **Netflix Eureka, Ribbon, and Hystrix Dashboard** for **service discovery and fault tolerance**, improving banking application reliability.
- Built and deployed applications using **Docker containers and Kubernetes**, optimizing deployment processes.
- Implemented **CI/CD pipelines** using **Jenkins, Maven, and Ant**, ensuring continuous integration and delivery of banking applications.
- Developed **DAO (Data Access Object) layers** using **Hibernate** to interact with **MySQL and MongoDB**, ensuring secure banking transactions.
- Deployed **Druid on AWS**, utilizing services like **S3 for deep storage** and **EC2 for real-time ingestion tasks**.
- Monitored and maintained **Druid clusters**, troubleshooting ingestion failures, query latencies, and resource utilization.
- Optimized **full-text search** using **MongoDB**, enhancing data retrieval performance for financial services.
- Implemented **Kafka messaging queues** for **asynchronous communication**, improving transaction processing efficiency.
- Worked with **JMS (Java Message Service)** for **message-driven architecture**, ensuring seamless inter-service communication.
- Performed **unit testing** using **JUnit and Curl**, ensuring application quality and stability.
- Deployed applications on **JBoss Application Server** and managed **production issues** related to banking services.
- Provided **production support**, troubleshooting logs, **payment processing issues**, and cloud-based banking applications.

Environment: Java/JDK, J2SE/J2EE, HTML5, CSS3, JavaScript, JQuery, Spring, Spring Boot. Spring Batch, Spring MVC, AngularJS. NodeJS. Ec2, S3, SDK, MYSQL, SOA, JDBC, Hystrix Dashboard, AWS, Netflix Ribbon, Hibernate, REST. JSON, RESTful, Eclipse, MAVEN, JUnit, Ritoon, Hibe Jenkins, JBoss, Linux OS, MongoDB. GIT, PL/SQL, Docker, ANT, JIERA, Kafka, JMS.

Client: Cigna, Plano, TX
Role: Java Developer

Oct 2021 - June 2023

Responsibilities:

- Collaborated with business stakeholders at **Cigna Healthcare** to **gather and analyze requirements**, translating them into detailed **technical specifications**.
- Designed and developed **Class Diagrams** and **Sequence Diagrams** as part of **module design documentation**.
- Developed **secure, scalable, and high-performance Java-based applications** for **healthcare domain workflows**.
- Implemented **client-side validation** using **JavaScript** to enhance the **user experience**.
- Utilized **Java APIs**, including **JDBC, JAXP, and JDOM**, to manage and process **healthcare data**, ensuring seamless **data integration** across systems.
- Built **dynamic and reusable UI components** using **React.js**, improving **Cigna's healthcare platform** for better **user experience and maintainability**.
- Integrated **React.js** with other **libraries and frameworks**, ensuring **flexibility and interoperability** in the existing **ecosystem**.
- Developed and maintained **RESTful web services** for **data retrieval and updates**, ensuring **seamless backend integration**.
- Implemented **Hibernate** using the **Spring Framework**, optimizing **database interactions** through **efficient session management**.
- Designed and implemented **Data Access Objects (DAO)** and **Hibernate transactions** within the **Spring framework** to ensure **secure and efficient data management**.
- Involved in **testing, debugging, and issue resolution** to enhance **application performance and reliability**.
- Utilized **Maven** for **project management, building, and dependency management**, providing **JAR files** for **UI applications**.
- Followed a **Test-Driven Development (TDD) approach**, writing **unit and integration test cases** to ensure **code quality and system reliability**.

Environment: Java/ J2EE, JEE7 JSP, CSS, JavaScript, ReactJS AJAX, Hibernate, Spring MVC, Spring AOP, XMLWeb Services, SOAP, Eclipse, Oracle, Mongo DB, Rational Rose, HTML, JDBC.

Client: Smart point Technologies, Chennai, India
Role: Java Developer

July 2019 - Sept 2021

Responsibilities:

- Responsible for designing and developing the Manage Purchase Order Web Service and presentation layer with Spring MVC.
- Responsible for Requirement gathering, coding, testing, and documentation.
- Architected and deployed Java-based web product matching framework that matches products across multiple retailers.
- Research about the JBPM process engine for use in implementing the Flow Control System of People.
- Design and manipulate the JBPM process for the client activities to manage the people queue for each activity.
- New library development with Microservices architecture using REST APIs, spring boot, and pivotal cloud foundry.
- **Spring Framework** was used in the application architecture to handle many service requests for easy maintainability.
- Implemented a **microservice** architecture, with **Spring Boot-based** services interacting through a combination of **REST** and **Apache Kafka** endpoints.
- Designed and integrated the full-scale Spring/Hibernate persistence solution with the application architectures.
- Developed and implemented the MVC Architectural Pattern using Spring Framework including JSP, Servlets, and Action classes.
- Worked on implementing current Rest web services to one of the cloud computing services.
- Downloaded data from the Amazon Cloud Database for detailed display by the app.
- Worked on MongoDB database concepts such as locking, indexes, sharing, replication, and schema design.
- Involved in designing and developing of web interface using JSP, Servlets, JavaScript, and JDBC for administering and managing users and clients.
- Created stored procedures, triggers, and functions using SQL Plus to meet user requirements.
- Used Log4j for logging errors, messages, and performance.

Environment: Java, Hibernate, AWS, EJB, JPA, Spring, Java Script, ReactJS, JDBC, Docker, UNIX, HTML, Eclipse, Web Services, MySQL, SQL Plus, Log4j.

Client: Geeky Ants, Chennai, India

Jan 2017 - June 2019

Role: Java Developer

Responsibilities:

- Implemented software functionality to gather customer data, with a focus on **code optimization** and **organization** to improve efficiency.
- Recommended **improvements to existing software programs** by analyzing current processes and identifying opportunities for optimization.
- Involved in the entire **SDLC** (Software Development Life Cycle), from interpreting and facilitating business requirements to developing software solutions and supporting production deployments.
- Worked as a **Full Stack Developer**, utilizing **Agile methodology** to collaborate with cross-functional teams and deliver high-quality software.
- **Designed and developed** an **Agent microservice** using **Java, Spring, Hibernate, and SQL Server**, providing a scalable and efficient solution.
- Engaged with clients to define business requirements and provide **man-hour estimations** for development and enhancements.
- Created **GUI screens** and implemented **business logic** using **Java, HTML/CSS, Spring Boot, and SQL**, ensuring seamless user experience.
- **Documented REST APIs** using the **Swagger framework**, ensuring clarity and accessibility for developers.
- Automated manual data processing by developing **complex SQL procedures** to read data from multiple tables in the database, improving system efficiency.
- Created **cross-browser compatible** and **standards-compliant CSS-based page layouts**, ensuring the application works seamlessly across various browsers.
- Used **JDBC** to manipulate data in the **SQL Server** database, enabling efficient data retrieval and updates.
- Developed **logical** and **physical data models**, applying **normalization** and **RDBMS** concepts to design efficient database schemas.
- Delivered **detailed design** documentation, including **UML case diagrams, class diagrams, and sequence diagrams** for the web application.
- Performed **unit testing, functional testing, and integration testing** using **JUnit** and **Mockito**, ensuring quality and performance.
- Participated in **24x7 on-call and on-site support** to ensure the availability and functionality of deployed systems.

Environment: Java, Spring, Hibernate, Spring Boot, JUnit, Mockito, Swagger, Postman, HTML, CSS, Apache Tomcat, Maven, SQL Server, Git
