

Pavan Kalyan

kalyan030405@gmail.com | (469) 343-4124 | TX-75036

PROFESSIONAL SUMMARY:

- Having **5+ years** of experience in the field of **Build/Release** and **Configuration Management/DevOps Engineer**.
- Result oriented individual with proven ability to implement standards, procedures and processes that improve overall **DevOps automation processes**.
- Sound knowledge and experience of industry trends and technology advancements relating to **Source Control, Build Management, Configuration Management Tools**.
- Deployed **Docker Engines** in Virtualized Platforms for containerization of multiple apps.
- Set up and managed Docker containers for deployment into **Kubernetes** Pods.
- Worked with **Ansible playbooks** for virtual and physical instance provisioning, configuration management, patching and software deployment.
- In-depth knowledge and of **CI/CD, IDE, Git, Maven, and Jenkins**.
- Experience in **Administration, Installation, Upgrading, Migration, Configuration**.
- Managed **Amazon Web Services** like **EC2, S3 bucket, RDS, EBS, ELB, AMI, IAM** through **AWS Console**.
- Experience in working on **source control tools** like **Tortoise** and **GIT**.
- Designed **AWS Cloud Formation** templates to create custom sized VPC, subnets, NAT to ensure successful deployment of Web applications and database templates.
- Managed servers on **Amazon Web Services (AWS)** platform using **Puppet configuration** management.
- Extensively worked on **Jenkins** by installing, configuring, and maintaining for the purpose of continuous integration (CI) and for End-to-End automation for all build and deployments.
- Experience in using **MAVEN** and **ANT** as **build tools** for the building of deployable **artifacts (jar, war & ear)** from source code.
- Implemented automation using Configuration Management tools like **Ansible, Chef, and Puppet**.
- Installed, Configured, Managed Monitoring Tools such as **Splunk, Nagios** for Resource Monitoring/Network Monitoring/Log Trace Monitoring.
- Expertise in Enterprise application deployment on Web and App Servers like **Apache Tomcat, Web Logic, JBoss servers**.
- Involved heavily in setting up the **CI/CD pipeline** using **Jenkins, Maven, Nexus, SVN, GitHub, CHEF, Terraform** and **AWS**
- Worked on changing the **AWS** infrastructure Elastic Beanstalk to Docker with **Kubernetes**. With this change provided better performance and easier management of the production environment.
- Efficient in working closely with teams to ensure high quality and timely delivery of builds and releases.
- Good analytical, problem solving, communication skills and work independently as a member of a team.

EDUCATION:

Park University, MO

Jan'23- Jul'24

Masters in Information Systems and Management**TECHNICAL SUMMARY:**

Infrastructure as a service	Amazon Web Services (AWS)
Continuous Monitoring	Nagios, Cloud Watch
Containerization	Docker, Kubernetes
Test, Build and Automation	Jenkins, Ansible, Maven, Ant
Scripting Languages	Bash, Python, JSON, YAML
Version Control Tools	GitHub, Bitbucket
Database	MySQL, Oracle, AWS RDS
Servers	Web logic, WebSphere, Tomcat, JBoss
Operating Systems	Linux, Windows, Mac

PROFESSIONAL EXPERIENCE:

Client: Emerson, MO

Role: DevOps Engineer

Jan'24 - Present

Responsibilities:

- Designed and implemented a highly available and scalable infrastructure on AWS using EC2, RDS, and ELB to support a high-traffic e-commerce website, resulting in a 30% increase in website uptime and a 20% reduction in load time.
- Configured and managed Kubernetes clusters on AWS using Kops and Helm to deploy microservices-based applications, reducing deployment time by 50%.
- Automated the deployment process using Jenkins and Git to achieve Continuous Integration and Continuous Deployment (CI/CD), reducing manual errors by 80%.
- Implemented Terraform and Ansible to manage infrastructure as code, enabling version control and reducing the time taken to provision new resources by 70%.
- Developed Python and Bash scripts to automate routine tasks and improve system monitoring and management, resulting in a 50% reduction in manual effort.
- Hands on experience with IAM to set up user roles with corresponding user and group policies using JSON.
- Defined AWS Security Groups which acted as virtual firewalls that controlled the traffic allowed reaching one or more AWS Ec2 instances.
- Used Docker, Kubernetes and OpenShift to manage micro services for development of continuous integration and continuous delivery.

- Support an Agile CI/CD Environment as a DevOps Engineer where we make the Atlassian tools (Jira and Bitbucket) and provide layer 3 supports on these tools if there are any issues.
- Worked on the Deployment, Configuration, Monitoring and Maintenance of OpenShift Container Platform
- Implemented a Continuous delivery pipeline with Docker, Jenkins, GitHub and AWS AMI's.
- Our Continuous Integration stack consists of GIT, Jenkins, CI/CD, the Docker Trusted Registry and OpenShift Enterprise.
- Deployed Puppet, Puppet Dashboard and Puppet DB for configuration management to existing infrastructure.
- Integrated Puppet with Amazon AWS to orchestrate the provision of EC2 via puppet servers.
- Working on AWS Elastic load balancing for deploying applications in high availability.
- Working on AWS Auto Scaling for providing high availability of applications and EC2 instances based on the load of applications by using Cloud Watcher in AWS.
- Used AWS S3 to store code bundles to deploy onto EC2 Instances.
- Used OpenShift to improve application security by putting admin consoles on different Docker containers accessible only from unusual port numbers.
- Created automated deployment job for Tomcat with Jenkins.
- Responsible for a boarding application team to build and deploy their code using GitHub, Jenkins and Ansible.
- Using ANT, Puppet/ Chef Scripts with Ivy to build the application and deploy.
- Used configuration management tools Chef, UI and CI/CD pipelines, Puppet, and CF Engine
- Managed Maven environment by setting up local, remote and central repositories with required configuration in maven configuration files.
- Responsible for design and maintenance of the GIT Repositories and the access control strategies and performed all necessary day to day GIT support for different projects.
- Used Ansible and Ansible Tower as Configuration management tool to automate repetitive task.

Environment: AWS, Nagios, ANT, Maven, Jenkins, Puppets, Bash scripts, JIRA, Service Desk, Splunk, MySQL, Oracle, Linux, Windows.

Client: YES, Hyderabad TG

Role: DevOps Engineer
Jul'22

Jun'21 –

Responsibilities:

- Implemented and maintained CI/CD pipelines, reducing deployment times by X% and ensuring rapid and reliable software releases.
- Utilized tools like Terraform to automate the provisioning and management of infrastructure, ensuring consistency across environments.
- Orchestrated containerized applications using Docker and Kubernetes, streamlining deployment and improving scalability.
- Demonstrated expertise in AWS, optimizing infrastructure for cost efficiency and scalability.
- Automated routine tasks and operations using scripting languages like Python or Shell, enhancing operational efficiency.
- Implemented monitoring solutions (e.g., Prometheus, Grafana) and centralized logging systems to provide real-time insights into system performance.
- Collaborated with development teams to integrate DevOps practices into the software development lifecycle, promoting a culture of collaboration and shared responsibility.
- Implemented security best practices, including infrastructure hardening, vulnerability scanning, and regular security audits.
- Implemented configuration management tools (e.g., Ansible, Puppet) to ensure consistency and manageability across IT environments.
- Developed and tested disaster recovery plans, ensuring business continuity in the event of system failures or disasters.
- Implemented GitOps practices to manage configurations and infrastructure as code, ensuring version control and traceability.
- Integrated collaboration tools such as Slack and Microsoft Teams into the DevOps workflow, improving communication and coordination among team members.
- Managed the release process, coordinating activities between development, QA, and operations teams to ensure successful software releases.
- Conducted performance tuning and optimization of IT systems, improving response times and overall system efficiency.
- Maintained comprehensive documentation for infrastructure and processes, and provided training to IT teams to ensure knowledge transfer and team proficiency.

Environment: AWS, Ansible, Maven, Nagios, Prometheus, Grafana, Docker, Kubernetes, JIRA, Jenkins, Web logic, Bash, Java/J2EE, Bash scripts, Linux, Windows.

Client: Phenom, Hyderabad TG

Role: DevOps Engineer

Jan'19 – May'21

Responsibilities:

- Implemented Infrastructure as Code practices using tools such as Terraform to automate the provisioning of financial infrastructure components.

- Spearheaded the implementation of CI/CD pipelines, reducing deployment cycles by X% and ensuring seamless integration of financial applications.
- Strengthened security measures by implementing compliance as code and integrating security checks into CI/CD pipelines to meet industry-specific regulatory requirements.
- Designed and implemented high-availability architectures to ensure the reliability of financial systems and applications, minimizing downtime and enhancing performance.
- Developed and tested disaster recovery plans for financial applications, ensuring rapid recovery and minimal data loss in the event of system failures or disasters.
- Implemented robust monitoring and logging solutions, utilizing tools like Splunk or ELK Stack, to provide real-time insights into the performance and health of financial systems.
- Fostered collaboration between DevOps and development teams, facilitating the integration of financial application changes with a focus on speed and stability.
- Implemented cost optimization strategies by leveraging cloud-native services and right-sizing infrastructure components, resulting in significant savings for the financial organization.
- Orchestrated containerized applications using Kubernetes, improving scalability and ensuring consistent deployment environments across financial services.
- Implemented GitOps practices to manage configurations and ensure version control, enhancing transparency and traceability for financial application changes.
- Collaborated with compliance teams to implement and automate audit processes, ensuring financial applications adhere to industry regulations and internal policies.
- Conducted performance tuning and optimization of financial systems, resulting in improved response times and enhanced user experience for both internal and external stakeholders.

Environment: Chef, Vagrant, AWS EC2, AWS S3, AWS Route53, AWS VPC, Jenkins, Ruby, Shell, Apache Mesos, Marathon, Chronos, AWS API Gateway, Cloud formation, Docker, Kubernetes, Splunk, OpenShift
