PROFESSIONAL SUMMARY

- 9+ years of experience in the field of Software Testing as a QA Engineer with good exposure in Quality Assurance and Testing Processes along with automation tools.
- Automated test cases using Behavior-Driven Development (BDD) with Cucumber for Selenium/Java and Appium to build a framework for web and mobile applications.
- Experience in Xamarin UI Test and Appium for mobile testing on Android, iOS, and other mobile platforms.
- Expertise in developing Java Selenium WebDriver/RC/IDE/Grid test scripts using Java and test frameworks such as TestNG/JUnit, along with Maven build tools.
- Expert in Protractor automation for Angular and non-Angular web pages.
- Automated builds using Subversion and Jenkins for CI with Maven.
- Expert in Selenium, TestNG, and REST-assured for test automation, including API testing, performance testing.
- Skilled in using Cypress commands and assertions to interact with web elements and validate application behavior.
- Experienced in using Playwright for end-to-end testing of web applications.
- Extensive experience in GUI, Regression, Functional, Integration, Accessibility, System, User Acceptance (UAT), Black Box, Sanity, Stress, Reliability, Compatibility, Cross Browser, Data Driven, Security and Database Testing.
- Experience in Test Management and Defect Tracking Tools such as JIRA, Rally, Quality Center as repository for maintaining test cases, execution and tracking the defects.
- Extensively worked on data warehousing and decision support systems with relational databases such as Oracle, SQL Server, MySQL and database development using SQL.
- Created Requirement Traceability Matrix (RTM) including Test Case Preparation Status, Test Case Execution Status, Defect Status and User Acceptance Testing Status.
- Extensive knowledge on core Java concepts like Data Structures (Collections), Multi-Threading, Inheritance, Abstraction, Encapsulation, Polymorphism and Exception handling.
- Good experience in organizing and facilitating agile meetings as well as supporting the implementation of Agile scrum across all work streams to ensure continuous improvement.
- Extensive knowledge in Agile Methodology and participated in Sprint Planning, Sprint Retrospective, Product Backlog Refinement and daily Scrum meetings.
- Excellent communication and interpersonal skills, accustomed to work in both large and small team environments. A team player with strong ethics, positive attitude and ability to make the best use of individual resources.

TECHNICAL SKILLS

Testing Tools	Selenium WebDriver, Xamarin UI Test, Appium, Selenium, Protractor, Cucumber, Cypress, Rest Assured, Playwright, SOAPUI, Maven, Postman
Defect Trackers	JIRA, Zephyr Scale, VersionOne, Bugzilla, ALM, Rally, Quality Center, TFS
IDE	Eclipse, IntelliJ, Visual Studio, Visual Studio Code, Spyder
Web Technologies	AngularJS, HTML, CSS, AJAX, JSP

Languages	Java, C#, C++, JavaScript, SQL, Python, VBScript
Databases	Teradata, SQL Server, MySQL, Oracle, Cassandra, MS Access
Project Management	Agile, Waterfall
Operating Systems	Windows, MAC OS, UNIX, LINUX, Android, iOS

EDUCATION

University of the Cumberlands, Williamsburg, KY **Jan 2020 – Dec 2021**
Master of Business Administration and Management

Wilmington University, New Castle, DE **Sep 2015 – Jan 2017**
Master of Science in Information Systems Technology

Jawaharlal Nehru Technological University, Hyderabad, India **Sep 2010 – May 2014**
Bachelor of Technology in Computer Science and Engineering

PROFESSIONAL EXPERIENCE

Freddie Mac, Plano, TX **Dec 2024 – Present**
Sr. QA Engineer

- Developed and executed comprehensive test plans, covering functional, performance, regression, and user acceptance testing (UAT) for Common Securitization Platform.
- Developed and maintained Selenium WebDriver automation scripts using Java and Cucumber (BDD framework) for regression and functional testing improving testing efficiency by 40%.
- Designed and executed automated API tests using Rest Assured/Postman for validating Rest and SOAP web services.
- Created SQL queries to perform data validation and backend testing, ensuring data integrity across multiple database tables improving data quality by 30%.
- Integrated automation scripts with Jenkins/GitHub Actions for CI/CD pipeline enhancing test execution efficiency.
- Identified, documented, and tracked software defects using defect tracking tools such as Jira and HP ALM, collaborating with developers to ensure timely resolution.
- Responsible for ensuring the quality of data used in various processes, such as mortgage loan data, financial data, and risk models.
- Collaborated with developers, business analysts, and stakeholders in an Agile/Scrum environment to understand requirements, provide feedback, and ensure software met business needs.
- Analyzed existing QA processes, identified areas for improvement, and implemented changes to enhance efficiency and effectiveness.
- Contributed to the development and implementation of QA best practices and standards within the organization.
- Created comprehensive Test Plans, Test Cases, and Traceability Matrices to ensure full test coverage.

Texas Department of Public Safety, Dallas, TX **Feb 2023 – Nov 2024**
Sr. QA Engineer

- Developed automated test scripts using Java and Selenium to enhance testing efficiency and reduced testing time by 50%.
- Integrated automated tests into the CI/CD pipeline to enable continuous testing and improved

software release velocity by 25%.

- Designed and implemented Cypress custom commands and fixtures to optimize test execution and data management.
- Used Cypress Intercept to stub API responses and validate network calls for seamless UI and API integration testing.
- Implemented automated performance tests, leading to the identification and resolution of 5 critical performance bottlenecks, preventing potential system outages.
- Utilized test automation tools such as Appium, Cucumber, Postman to automate UI testing, API testing, performance testing and mobile testing.
- Used Playwright's features for handling dynamic content, waiting strategies, and test retries for web applications.
- Ensured the quality of a range of software applications vital to the Texas Department of Public Safety, including systems for law enforcement, driver licensing, and criminal records management, through rigorous testing methodologies.
- Created automated data-driven tests to validate data integrity and consistency across different systems.
- Created detailed test plans and test cases to cover all aspects of the software and identified potential issues.
- Managed the software defect lifecycle, including logging, tracking, collaborating with developers on resolutions, and verifying fixes.
- Identified and resolved critical software defects earlier in the development cycle through continuous testing.
- Analyzed and processed complex data sets using advanced querying, impactful visualizations, and analytics tools to deliver valuable insights and action-oriented solutions.
- Interacted with Project Managers, Business process owners, Finance, and IT to design and implement data analysis solutions. Continually re-assessed the solutions in efforts to make them more efficient and effective.

Freddie Mac, Plano, TX

Nov 2021 – Jan 2023

Sr. QA Engineer

- Participated in all phases of the Software Testing Life Cycle (STLC) and Software Development Life Cycle (SDLC), utilizing Test Driven Development (TDD) methodologies to ensure software quality.
- Developed a test automation framework using Selenium WebDriver with Java and Cucumber, resulting in a 20% increase in test coverage for Developer portal.
- Automated navigation flows, error message validations, and pop-up screen-testing using Selenium WebDriver reducing manual testing effort by 40 hours per release.
- Conducted comprehensive API testing using REST Client and SOAP UI, covering over 100 endpoints and 95% of API functionality. This included functional, performance, and security testing, leading to the identification and resolution of 15 critical defects.
- Coordinated regression testing for guarantor contracts within securitization releases across multiple platforms such as CSS Platform, CASH, MLS, MLPC and Super ensuring zero critical defects.
- Performed data driven testing using Selenium WebDriver and TestNG functions by reading data from the SQL Server database.
- Worked closely with Agile Scrum team to ensure product testability while running regression tests in Selenium WebDriver using TestNG and maintained test environments used for white box testing during releases.
- Involved in analyzing system specifications, design, development and execution of test plans and test cases for Manual and Automated testing.
- Worked on definition of the test strategy and implementation of necessary infrastructure to support

Test Documentation, Test Plans, Test Cases, Test Scenarios and Test Scripts.

- Collaborated with project stakeholders and project team to learn about the project functionalities and provided testing timelines.
- Involved in daily bug review meetings, weekly status meetings, walkthroughs and interacted with business stakeholders and developers for resolving defects.

CVS Health, Richardson, TX
QA Engineer

Mar 2020 – Oct 2021

- Automated the testing of Publication Info, Data Source, and Data Rules screens in the FMS application using Java and Selenium WebDriver, leading to a 35% decrease in the number of defects found in production related to formulary reports.
- Designed and executed performance test cases using JMeter to analyze application scalability, response time, and system behavior preventing a potential system outage during peak load.
- Conducted load, stress, and endurance testing, identifying key performance bottlenecks and recommending optimizations.
- Utilized CSS selectors, IDs and XPath's to locate elements on web pages and created object repositories in MariaDB.
- Created database objects in MariaDB using complex SQL queries to provide definition, structure of FMS data and involved in extensive data validation, review of code and testing.
- Used Jenkins to achieve Continuous Integration and Continuous Delivery, scheduled background jobs and analyzed pass or fail criteria in QA environment.
- Created Requirement Traceability Matrix (RTM) including Test Case Preparation Status, Test Case Execution Status, Defect Status and User Acceptance Testing Status to identify and document application problems.
- Perform end-to-end software testing at various stages of application development by applying Business/Use Cases for Ad-Hoc, Smoke, Data-Driven, Positive/Negative, SIT and UAT testing.
- Implemented parallel test execution in Cypress to reduce test run time, improving testing efficiency.
- Conducted manual testing for UI validation, edge cases, and business-critical workflows, ensuring high-quality deliverables.
- Managed and tracked test cases, defects, and reports using Jira and Zephyr Scale.
- Worked on educator certification systems, ensuring compliance with industry standards and seamless user experience.
- Attended demos with business stakeholders for User Acceptance and provided QA signoff on the testing.

Signature Bank, Sandy Springs, GA
Mobile Automation Test Engineer

May 2019 – Mar 2020

- Performed mobile automation testing using Appium for native, hybrid, and web applications.
- Expertise in using Appium locators and UIAutomator/Xpath to identify and interact with mobile elements.
- Implemented mobile testing concepts such as gestures, touch actions, and handling different screen orientations to test iOS and Android mobile applications.
- Experience with cloud-based mobile testing platforms like BrowserStack and Sauce Labs.
- Developed manual test cases and automation scripts for mobile native applications (iOS, Android) using Appium and Java.
- Created feature files and scenarios using BDD SpecFlow capabilities in Visual Studio as part of mobile automation.
- Strong experience in automated testing of UI-heavy frameworks like React, Angular, React Native.

- Executed smoke and regression test cases using local execution on device connect using Vysor.
- Analyzed mobile application requirements for manual and automation capable scenarios.
- Performed compatibility testing with various mobile handsets to ensure that functionality is working as expected.
- Interacted with internal teams to identify core business, business flow, major and minor functionalities.
- Involved in writing Requirement Tractability Matrix (RTM), detailed Test Plans and Test scenarios.
- Tested the application under different networks and internet speeds including 3G, 4G/LTE and Wi-Fi.
- Performed Input Validations, User Interface Validations and Navigation testing.

Delta Airlines, Atlanta, GA
Automation Test Engineer

Jan 2017 – Apr 2019

- Utilized CSS selectors, IDs and XPath's to locate elements on web pages, and used Protractor for AngularJS web pages and implemented Jasmine as a testing framework with WebDriverJS in Protractor.
- Implemented TypeScript as a testing framework for Protractor.
- Developed BDD tests using Cucumber by writing behavior and step definitions and developed required Selenium support code in Java for Cucumber.
- Involved in scratch implementation of BDD framework, moved entire framework from hybrid to BDD using POM, and created feature files, step definitions, and runner class.
- Scheduled testing jobs and set up the flag to run automation scripts on Jenkins as a part of the Continuous Integration process every time there is a bug fix, new feature development, or innovative functionality in code repository.
- Worked on Restful services using Rest Assured API by following the TDD/BDD framework.
- Used GitHub tools for maintaining version controlling. Integrated with Jenkins to run the latest version of code in the background.
- Involved in database testing of the application using SQL queries to check whether the data has loaded in respective tables.
- Logged defects encountered in the application using JIRA, VersionOne during test cycles and conducted fix verification.

United Health Group, Hyderabad, India
QA Analyst

Nov 2014 – June 2015

- Developed test related documents including Test Plans, Test Procedures, Test Cases and Test Scripts.
- Conducted Integration, Regression, Acceptance, Functional, Performance and Multi-User tests.
- Created and executed test cases for modules of the application under test (AUT) and uploaded defects to Quality Center.
- Conducted functionality testing during various phases of the application using UFT.
- Inserted check points to check for the broken links, text and standard properties of an object using UFT.
- Performed integration testing and batch testing.
- Analyzed and validated test results to ensure existing functionality and recommended corrective action where necessary.
- Verified and validated the automated test scripts.
- Developed the test bed for the regression testing on every monthly release and maintained the scripts with any new changes to the application.
- Developed defect reports, customized summary reports and performed regression after fixes.
- Performed data driven tests using test data from excel files and created different checkpoints.
