

Praveena Reddy Nerella
Mobile: +1 302-287-9541
Email: praveenareddy505@gmail.com

Experience Summary

- Around **9+ years of IT experience** in Analysis, Design, development, Enhancement, Production support, testing and Management of Applications.
- Worked with different clients and expertise in the **retailing, automation, manufacturing and Insurance** Industries.
- Worked as **Team Lead/Technical Lead** for Manufacturing and Banking sector projects and **Automation Engineer** for the Automobile project handling the IBM utility tools and Middleware Tools and APIs.
- Good knowledge in other languages like C#, C++, Java and .Net.
- Extensive experience in all **SDLC** phases and **Agile** Methodologies such as Requirement gathering, analysis, design, development, Unit/Integration/ System Testing, Product Migration, Change Request Management and Production Support.
- Developed and improved existing reports and data interfaces using **SAS**.
- Excellent ability with competitive spirit in finding various approaches for problem solving and highly skillful, creative, and innovative in developing efficient logic/code.
- Extensively experienced in all the parts of testing phase. **Test Planning, Test Preparation, Test Execution and Reporting.**
- Well-developed **Interpersonal** and **Communication** skills with excellent **Documentation** and **Presentation** skills. Good team player with ability to grasp new concepts quickly and implement them in a productive manner.
- Experience in mainframe technologies specifically with **COBOL, JCL, DB2, IMS DB, VSAM, CICS, REXX, CRM, Business Object and Web Services.**
- Extensively worked on developing new **Stored Procedures, Online** and **Batch** programs as per client requirements. Experienced in writing embedded DB2 SQL queries and testing using **SPUFI**.
- Worked with ISPW for source code management and deployment of changes across environments.
- Strongly Experienced in Console and/or Helpdesk Operations, Operations Systems Support (OSS), and OPS/MVS Mainframe Automation Support.
- Worked on **IBM Debug tool** for debugging the problem request and resolving the problems in Batch and Online programs.
- Involved in coding various Jobs using **SYNCSORT, ICETOOL, JCL** and **PROC**.

- Worked on **Performance Tuning**, identifying, and resolving performance bottlenecks in various levels like sources, targets, mappings, and sessions. Performed refresh of test data from ADABAS, Db2 and VSAM data stores.
- Experience in implementing the complex business rules by developing **PL/SQL** Stored Procedures and Triggers. Developed and executed complex Teradata SQL scripts for data extraction, transformation, and reporting.
- Worked on **CONTROL-M** and **CA-7 scheduling** tools of mainframe batch jobs and extensively involved in **Production Support 24x7** and fixing the problems for automation tools like IBM SA390 and middleware tools like MQ Series.
- Possesses strong **Commitment, Dedication**, and excellent **Analytical, Programming, Banking/ Process compliance** and efficient **Problem-Solving** skills.
- Strong experience in Onsite-Offshore coordination, product quality standards development & team leadership.

Technical Skills

Programming Languages: COBOL, JCL, ISPW, REXX, CLIST, SQL, PL/SQLC, Java, CICS, C, C++, .Net.

Databases: DB2, VSAM, SQL.

Scheduling Tools: CA-7, Control-M,

Tools & Utilities: Changeman, Endeavor, File Manager, IBM Utilities, File Manager, File-Aid, Expeditor TSO/ISPF, VSAM, QMF, SPUFI, MS Office, Win SQL, SAS, CRM, SERVICE NOW, JIRA, CISM, BMC Remedy.

Operating Systems: IBM OS/390, Z/OS, Windows 95/98/2000/XP, UNIX, LINUX, MS - Dos.

Educational Summary

- **Bachelor of Technology in Electronics and Communications Engineering** from Jawaharlal Nehru Technological University, Hyderabad in 2013.

Previous Employment

- Working as a Mainframes Developer/ Technical Lead at **US Bank, Cincinnati, OH** from October 2023 to till date.
- Worked as a Team Leader in **Infosys** from Sep 2020 to Aug 2022.
- Started as a Systems Engineer in Infosys and Worked as a Mainframe Developer/Technical Analyst in **Infosys** from Feb 2014 to Sep 2020.

Professional Experience

US Bank, Cincinnati, OH

(Oct 2023 – Till Date)

TECHINICAL TEAM LEAD MAINFRAME DEVELOPER

Project Description:

U.S. Bancorp is the parent company of U.S. Bank National Association, the fifth-largest commercial bank in the United States. We're headquartered in Minneapolis, Minnesota and operate more than 2,000 bank branches in 26 states. The Mainframe Operations team monitors all Mainframe Operating systems, network connections, daily mainframe batch processing providing 24/7/365 on-site support. Responsible for batch processing and CICS availability SLA's. Mainframe Operations has enterprise accountability for every Mainframe Application.

Roles & Responsibilities:

- Analyze & learn Mainframe applications and current architecture under Credit cards Team.
- Participate in meetings to review the business document with team of application developers and technical analysts as a Team Lead.
- Interface with business and IT teams to understand business requirements and translate business requirements into formal technical requirements and application code.
- Identify applications to be considered for modernization, re-platforming and retire.
- Identify Mainframe components (JCL, COBOL, Database(tables), files, CICS, VSAM, Flat files) to be considered for transformation with its LOC (Lines of Code)
- As a Team Lead, identify utilities/tools needed for code & data migration.
- Create detailed technical design specification for enhancing the batch programs, care was taken to re-use most of the existing components/modules.
- Review all the files on the mainframe to identify those with multiple line issues before sending to ETL grid. Knowledge on banking and process Compliance of Job monitoring.
- As part of Mainframe Migration process for the given Applications, need to review the AOD (Application Overview Document) and prepare the High-level design document and based on this we need to prepare a low-level design level document.
- Understand the job procedures & relevant interface files and databases in COBOL, JCL, VSAM and Flat Files (with good knowledge on File Manager).
- Impact analysis for requirement changes, finding affected list of programs, mainframe components for homogeneous implementation
- Analyzing modifications, finding affected list of programs and homogeneous implementation
- We will have to Investigate the current load process for each table in the Mainframe systems and modify the Code and Schema changes as per the requirement.
- Analyzed, designed, and created new JCL JOBS, PROCs for daily, monthly & yearly Reporting purposes by following Agile Methodologies.
- Create and change various data files and tables such as VSAM, PDS, GDG and DB2 tables.
- Use Change Man to manage change control for source code and JCL migrations
- Experienced in writing embedded DB2 SQL queries and testing using SPUFI and Performing refresh of test data from Adabas, Db2 and VSAM data stores.
- Monitored and tested production systems using Control-M, SPUFI, and Debugger tools.
- Work involves fixing abends such as Space abends, File contention errors, VSAM space abends and DB2 abends. Collaborating on unit test plans and test cases to ensure the accuracy of source data from DB2 and ADABAS.
- Created maps and records for various programs and was responsible for writing the Logical Record Facility (LRF) subschemas to access the IDMS database.
- Create multiple versions of existing Flat Files using GDG (Generation Data Set) and load the data into EODs tables.

- Supported the migration of modules into the production environment using the Change man tool by packaging the modules, submitting the package to verify the return code, and casting the package to enter the staging region.

Environment: JCL, COBOL, CICS, DB2, SQL, CA-7, SPUFI, XML, CICS, QMF, VSAM, TSO/ISPF.

Arcelor Mittal, Europe (Infosys)

(Sep 2020 – Aug 2022)

Sr.Mainframe Developer & Team Leader

Project Description:

ArcelorMittal is the world's leading steel and mining company, with approximately 126,756 employees in more than 60 countries. ArcelorMittal is the leader in all major global steel markets, including automotive, construction, household appliances and packaging, with leading R&D and technology, as well as sizeable captive supplies of raw materials and outstanding distribution networks. **ArcelorMittal Europe – Flat Products** is the largest producer of flat steel in Europe and produces hot rolled coils, cold rolled coils, coated products, tinplate, plate and hot-dip galvanised products, and enamelled and electrical steels. Flat Products has 11 integrated and mini-mill sites, and primary facilities in five countries.

Roles & Responsibilities:

- Participated in regular meetings with Business Analyst to understand the high-level business mapping documents and convert them to a technical document for the programmers.
- Involved in Design and Development of test plans based on high-level and detailed design Documents.
- Knowledge Transfer to the offshore team with business functionality and the new requirements.
- Experience in Data Analysis, Data Validation and Data Verification. Worked in writing the SQL queries for generating the Static Reports and verifying the expected results and counts from the seller data with SAS BI Server.
- Lead as DB2 Application support for Disaster Recovery with the Outsourcer for database recovery with the outsourcers technical DBAs and used PLATINUM Tool.
- Managing and deploying source codes using ISPW for another teams like AQDB.
- Maintain and support DB2 databases, providing backups, recoveries, and disaster recovery. Monitor space utilization for all DB2 databases, logs along with COBOL-DB2 code development.
- Utilize **BTEQ**, **MLOAD**, and **FASTLOAD** to load, update, and manage large datasets efficiently.create a BTEQ script to identify and address discrepancies in raw material inventory levels based on production data stored in Teradata.
- Enhance a Guidewire integration to pull policyholder data from Teradata and synchronize it with a COBOL-based legacy system for underwriting processes.
- Utilize Guidewire's **Integration Layer (GX Model)** to fetch mainframe claims data via REST/SOAP APIs or batch files for Data Synchronization .
- Extensively used File-Aid and File Manager in analyzing the data and Expeditior for debugging the programs.
- Used JIRA and Service-Now for defect tracking life cycle management purpose.

- Lead daily stand-ups and scrum ceremonies for two scrum teams. Work with product owners to groom the backlog and plan sprints. Track, escalate and remove impediments.
- Report at daily Scrum of Scrum meetings. Track burn down, issues and progress in Version One. Work with component teams to resolve issues. Good knowledge on Agile and SDLC methodologies.
- Responsible for estimation & tracking of the maintenance requests in JCL, COBOL, CICS and DB2.
- Tracking project plans and progress. Keeping and maintaining all the documents in SharePoint site.
- Responsible for Team building, mentoring and trained the new team members to make them productive in short span of time.
- Handled the entire Application of SIA from end-to-end which uses codes and jobs involving COBOL, DB2, TSO, CICS and JCL languages and Tools.
- Development of the new batch programs using COBOL, DB2, JCL and VSAM and scheduling them using Control-M.
- Development lead handling the evolutive requirements of new projects for Quality tracking.
- Acting as a liaison between business and various technical teams. Setting the expectations for the team and guiding in right direction during project work along with providing technical expertise.
- Responsible for maintaining constant alignment from transition phase to Steady state phase in project.
- Handled Project Audits, competency tracking for growth and development.
- Smooth functioning of the Project Business and bridge the gaps whenever needed (RCA's, MOM's, Attendance, Shift Schedules, Onsite -offshore Coordination, Project Improvement plans, Continuous Service Improvement plans etc.)
- Responsible for aligning the project goals with Infosys vision.
- Conducting Peer reviews, interacting with the team to understand the system & plan for the same to match for time bound quality response for all Documentations and Codes developed using File Manager, COBOL, JCL and DB2.

Environment: JCL, COBOL, CICS, DB2, SQL, Changeman, Guidewire, BTEQ, SPUFI, XML, CICS, QMF, VSAM, TSO/ISPF.

Mercedes Benz, USA (Infosys)

(Nov 2016 – Aug 2020)

Mainframe Developer & Technical Analyst

Project Description:

The Mercedes-Benz Group is one of the world's most successful automotive companies. With Mercedes-Benz AG, we are one of the leading global suppliers of high-end passenger cars and premium vans. Mercedes-Benz Mobility AG offers financing, leasing, car subscription and car rental, fleet management, digital services for charging and payment, insurance brokerage, as well as innovative mobility services.

Roles & Responsibilities:

- Handled the application CPS (Carrier Payment System) end to end. Dealt with all issues present in the CPS application.

- Worked as Mainframe software enhancement Engineer, developing and optimizing mainframe solutions for the customer in various applications under this project (like VISTA, MSS, CRM)
- Provided customer support for mainframes application Incidents reported by the manufacturer with critical, high, medium and low Incidents with 100% Service level Agreement.
- Has BFS payments (CC/ACH) domain knowledge. Understanding of the z/OS startup process including IEASYMxx and LOADxx members
- Experience coding NetView PIPEs.
- Supported OPS/MVS, worked as System State Manager, handled GDPS, and Safe Guarded Copy automation environments using ISPF/TSO, JCL, OPS/REXX, System Automation, and ServiceNow.
- Worked as Mainframe CPU optimization developer which includes analyzing the processes, finding better logic to reduce CPU mins which is direct cost saving for the company.
- Worked as a developer for Invoicing unit using SDLC cycle for mainframe Change Request as per Client needs.
- Supported the Customer Service requests, Work Order's, Incidents based on Criticality within defined SLA's using the tools CISM and Service-Now.
- Supporting Windows Server environments and Automation Point using HTML, SQL, Powershell, REXX, Ansible, ServiceNow, and GIT.
- Optimized the effectiveness of the organization's existing infrastructure technology using the Stored procedures.
- Hands-on experience on Mainframe TSYS(CICS) screens (QDE, CBR, EMP, BDE & HIS panels with Mainframe commands for (approval/denial flows), testing knowledge.
- Strongly Experienced in Console and/or Helpdesk Operations, Operations Systems Support (OSS), and OPS/MVS Mainframe Automation Support.
- Translated customer requirements into formal requirements and design documents, establish specific solutions, and lead the efforts including programming and testing that culminate in client acceptance of the results.
- Senior IT Developers lead efforts, oversee work results, provide training, and serve as a technical resource for other Developers.
- Extensively involved in programming COBOL, JCL, DB2, Stored procedures. Involved in testing using JCL, Debug tool, TSO/ISPF, FILE-AID and QMF.
- Used SQL, SPUFI, and File Manager to perform development tasks and support systems testing for financial applications.
- Assisted SAS administration including performance tuning and scheduling programs.
- Performing the code migration into the Release packages thru Change man and running the Package level audits.
- Expertise in incident and change management process by using service now and CISM.
- Responsible for Estimation & Tracking of the Maintenance requests.

MAX BUPA, Australia (Infosys)

(Sep 2014 – Oct 2016)

Mainframe Developer/Production Support & Sr. System Engineer

Project Description:

The BUPA Health Foundation is one of the leading charitable foundations dedicated to health in Australia. The foundation invests in research that claims to improve health and it collaborates with researchers across academic, industry and healthcare communities. It advocates for researchers, organizations and initiatives that are improving health capacity building by developing skills and networks of health and medical researchers. Over the last 10 years the foundation has invested more than AUS\$35 million in partnerships.

Roles & Responsibilities:

- Analysis of Client Requirement document, Functional requirement documents to formulate a test plan.
- Understanding High Level Requirements from customer. Experience in Preparing Test Approach, Test Strategy and developing Test Plans, Designing and Reviewing Test Cases for Functional and Regression Testing.
- Design test case documents as per the requirement, preparing estimation for enhancements and implementation plans.
- Involved in Designing, Construction, Testing, Debugging, Reviewing and daily Production support activities and Maintain process compliance and involved in performance testing.
- Trained the new recruits, documented the new process flows and business knowledge.
- Reduce the elapsed processing times and meet required SLAs.
- Actively monitor CPU usage in batch and Online transactions to improve the DB2 queries where performance is not optimal.
- Worked on Performance tuning, CPU reductions and changing the job schedule from prime to non-prime time.
- Expertise in incident and change management process by using service now.
- Involved in Code changes using Cobol, JCL, CICS, DB2 and IMS DB/DC as per the requirements in Batch and Online programs.
- Involved in testing using JCL, Debug tool, TSO/ISPF, FILE-AID and QMF. Utilized the version control tool Change man to create the Package and migrating the code changes to Production.
- Involved in production support activities. Ensured the batch cycle gets completed in time. Also, fixed the issues within the time mentioned in Service Level Agreements (SLA).
- Work involves fixing abends such as Space abends, File contention errors, VSAM space abends and DB2 abends. Resolving production job failures and batch abends. Managing complex errors & production abends and makes changes in production server (Break fix).
- Also involved in monitoring the Batch Cycles. Maintain process compliance, Monitoring the Jobs and Schedule them using CA-7.
- Extensively involved in Production Support 24x7 to business users and monitoring batch jobs and fixing the problems.
- Prepared the test plans, test cases and shakeouts for production migration and conducting reviews at all stages of Documentation and Change requests level.
- Design test case document as per the requirement, preparing estimation for enhancements and implementation plans.
- Managing and Documenting the execution of different testing phases like unit, integration, system, and user acceptance testing.

- Documenting MER (Minor Enhancement Request) and application related issues. Preparing Task estimation sheet for MERs (Minor Enhancement Request).
- Resolving the Technical and non-technical issues in the team and providing the friendly environment in the project.
