

 **PRITAM SWARUP PRAKASH**
 Senior Integration Architect & Developer
 pritampakash91@gmail.com
 +1-248-509-5586
 [Salesforce Trailblazer Profile](#)
 [LinkedIn Profile](#)

PROFESSIONAL SUMMARY:

- Experienced in architecting and developing production-grade enterprise integrations with **10+** years of expertise using **MuleSoft, Apigee, Workato, Salesforce, Snowflake, SAP** and **Workday**. Skilled in creating **batch integrations, custom connectors**, and building **sync/async APIs** with **Anypoint MQ, Kafka, Solace** and **ActiveMQ**. Extensive experience in **SQL, event-driven architecture**, and integrating with cloud services like **S3**. Proficient in **CI/CD pipelines** using **Azure DevOps, Jenkins, GitHub, GitLab**, and **TeamCity** for seamless deployment and automation. Experienced in implementing **security best practices (OAuth, SSL, PGP encryption, Secret Manager)** and **policy enforcement** for API governance. Expertise in **observability tools** such as **Splunk, AppDynamics** for real-time insights and performance monitoring. Hands-on experience with **MuleSoft Composer** and **Workato** for automation and **JMeter** for performance/load testing. **Certified in Integration Development & Architecture.**

TECHNICAL SKILLS:

MuleSoft Platform:	Anypoint Exchange, Anypoint MQ, API Manager, API Portal, Anypoint Connectors, Anypoint Data Gateway, Anypoint Runtime Fabric, Anypoint Visualizer, MUnit, Flow Designer, Design Center, API Analytics
Development Tools:	Anypoint Studio, Maven, Git, GitHub, GitLab, Bitbucket, JIRA, Confluence
Testing Tools:	Postman, SoapUI, JMeter
CI/CD Tools:	Jenkins, Bamboo, Stash, Jfrog, Gitlab, Teamcity, Octopus
Monitoring Tools:	Splunk, ELK, Mulesoft Monitoring
Database Tools:	SQL Developer, MySQL Workbench, Oracle SQL Developer, MongoDB, DynamoDB, NoSQL database
Operating Systems:	Windows, Linux, macOS
Integration Platforms:	Mulesoft, Workato, Boomi, Apigee
Security:	OAuth 2.0, HTTPS, SSL/TLS
Cloud Platforms:	AWS, Azure, Cloudhub, Salesforce, Snowflake
Containerization:	Docker, Kubernetes, Openshift
Monitoring and Logging:	Splunk, ELK, Anypoint Monitoring
Test Automation:	MUnit, JUnit
Version Control:	Git, SVN
Agile Methodologies:	Scrum, Kanban
Documentation:	Confluence, Swagger
API Management:	API Gateway, API Proxy, Flex Gateway, APIGEE
Messaging Systems:	JMS, RabbitMQ, ActiveMQ, Apache Kafka, Solace
Scripting Languages:	Groovy, JavaScript, Dataweave

CERTIFICATIONS:

- MuleSoft Certified Integration Architect
- MuleSoft Certified Developer (MCD) - Level1
- MuleSoft Certified Developer - API Design
- MuleSoft Certified Developer - Integration and API
- Salesforce Certified AI Associate
- Workato Automation Pro 1
- Workato Automation Pro 2

PROFESSIONAL EXPERIENCE:

Openlogix LLC

April 2022 – Jan 2025

Integration Consultant

Client: Illinois Dept. of Innovation and Technology- (Senior MuleSoft Developer)

- In this project, I built and orchestrated applications to connect multiple healthcare management systems, focusing on **Salesforce Health Cloud** services for hospital and lab operations. I developed **MuleSoft batch** and **API applications** to synchronize data across systems like **Salesforce** and **Snowflake**. I also created **deployment pipelines** using **Azure DevOps** to streamline development and deployment. Additionally, I designed comprehensive **API security strategies** and **governance frameworks** to ensure data integrity. I tested and debugged applications for performance and accuracy, and provided ongoing technical support for upgrades and maintenance.

Client: Pilot Flying J (Senior Mulesoft Developer)

- As a **MuleSoft Support Admin**, I managed **MuleSoft tasks** and observability workflows using **JIRA** and **Splunk**. I developed **automation workflows** and configured **API policies**, while deploying **MuleSoft's metrics toolkit** and setting up **Splunk dashboards** for monitoring. I identified and fixed **MuleSoft errors and bugs** in production, and managed **onshore and offshore teams** to ensure smooth operations. I supported **Databricks** and **Snowflake** for cloud **data warehousing jobs** using **ActiveBatch** monitoring. I deployed **Mule applications** to **Kubernetes** and **OpenShift** clusters, ensuring proper containerization and orchestration

Client: LPL Financial (MuleSoft Professional Services)

- As MPS, I helped the team assess organizational readiness for **Mule 3** to **Mule 4** migration, calculating project efforts and estimating timelines. I led the **API redesign** process to improve **performance, scalability, and reusability** across the organization. I utilized the **MMA tool** to migrate **Mule 3 apps** to **Mule 4**, refactoring **RAML**, removing errors, and optimizing Java and **Groovy code** to **DataWeave 2.0**. I also ensured compliance with best practices for **exception handling, naming conventions, and logging frameworks**. I tested migrated applications using **Postman** and streamlined the **CI/CD pipeline** with tools like **Jira, ServiceNow, Git, TeamCity, Octopus, and Runtime Fabric on AWS** to deploy applications to **Runtime Manager**.

Billennium India Pvt Ltd.

Feb 2021 – Mar 2022

Senior MuleSoft Lead Developer

Client: Roche Diagnostics, Indianapolis

- In this project, I gathered business requirements through customer interactions and took full responsibility for analysis, design, and development. I integrated existing systems with new and third-party systems, utilizing **Mule ESB, MongoDB**, and platforms like **Workday, PeopleDoc, and Onsolve**. I designed middleware applications to connect third-party and customer systems, creating

design, architecture, and technical documentation for the MuleSoft solution. I implemented **JWT custom validation policies** for IDP signature validation and translated requirements into technical designs. I developed event-driven applications with **Anypoint MQ** and **Kafka**. I also created custom **Java connections** to extend MuleSoft functionality, wrote **DataWeave 2.0** for complex data transformations, and added API features during the hypercare phase to meet evolving requirements.

Apisero India Pvt. Ltd.
Dec 2018 – Feb 2021
Sr. Solutions Consultant
Client: Blue Yonder (JDA)

- Implemented **Enterprise Canonical Model** for **Supply Chain products**. Co-created the **SCPO product** with **Blue Yonder** team using **MuleSoft**. Optimized performance with **JDA MuleSoft Connect tool** and integrated **SAP** and **Salesforce** using the **CAN model**. Developed the solution from scratch, wrote **DataWeave scripts** for **SAP XML** and **GS1 spec transformation**, and integrated **Splunk** with **MuleSoft CloudHub** and on-premises. Implemented **event-driven processing** with **RabbitMQ** and collaborated with **Cloud, Infrastructure, and Product teams** for a seamless solution.

Client: Verdigris & Abaco

- Developed **POC** using **API-led architecture**, migrating legacy systems to **Cloud**. Implemented **RAML, API security**, and deployed on **CloudHub**. Converted **Java** implementations to **MuleSoft flows** and created **MUnit tests** with full **code coverage**. Established **VPN/VPC** for secure integration with client applications.

Client: LA Times

- Developed **Experience, Process, and System APIs** for bank remittance for a newspaper agency.. Designed and coded in an **Agile** environment with **test-driven development**. Implemented **Lockbox transactions** using **SFTP, VM, and Object store** for **reliable file-based processing**. Wrote **DataWeave functions** and transformation logic, and collaborated with **Scrum** and functional teams for efficient development.

July 2017 – Nov 2018
Associate Consultant
Capgemini Technology Services Ltd.
Client: HSBC Bank

- Developed **Process** and **System APIs** to integrate front-end applications with **Big Data systems**, designing and implementing **RESTful APIs** using **API Designer** and **RAML**. Utilized connectors, components, scopes, filters, and transformers, collaborating with the **Scrum Master** and cross-functional teams in an **Agile** environment with a **test-driven development** approach. Employed **DataWeave** for message transformation and built **logging/exception handling frameworks**. Conducted unit testing with **Postman** and documented design and testing activities.

Client: AIG Insurance

- Migrated **SOAP services** from **IIB** to **MuleSoft**, developing **RESTful APIs** using **API Designer** and **RAML**. Implemented advanced mapping with **DataWeave scripts** for seamless integration between **microservices** and **BPM systems**. Utilized **Postman** for API testing and debugging, incorporating connectors like **HTTP, Web Service Consumer, and DB** for effective API interaction.

Client: Equifax

- Developed **RESTful APIs** to interface with **databases** and support **BPM processes**. Designed APIs using **API Designer** and **RAML**, integrating various connectors, components, and scopes. Worked closely with **Scrum teams** to align development efforts. Applied **DataWeave** for message transformation and built **MUnit frameworks**, **logging**, and **exception handling solutions**. Conducted comprehensive testing and created detailed design and testing documentation.

Oct 2014 – July 2017

Sr. Systems Engineer

Infosys Limited

Client: HSBC Bank

- The project involved integrating **WDM** and **HFE** systems into a **single-page application** to reduce administrative overhead. I developed **RESTful APIs** using **API Designer** and **RAML**, leveraging **connectors**, **components**, **scopes**, **filters**, and **transformers** for seamless integration. Working in an **Agile** environment with the **Scrum Master** and cross-functional teams, I used **DataWeave** for message transformation and implemented **logging** and **exception handling** frameworks. I also conducted **unit testing** with **Postman** and documented the design and testing processes.

Client: American Express

- In this project, I implemented the **Apigee EDGE** API platform to manage enterprise APIs. I developed and deployed **API proxies** using **JavaScript** on Apigee EDGE and monitored **API performance** with **Splunk** and **Apigee** through **UNIX server**. Additionally, I designed the **API architecture** and **database schema**, delivering solutions aligned with business requirements.

Client: Anthem Wellpoint Inc.

- The project involved enhancing the **Medicare management** platform and migrating it to **MuleSoft**. I designed the **architecture** and modeled the **data** using **Cassandra**, writing **CQL queries**. I also integrated legacy systems using **MuleSoft** and **SOAP/REST APIs**, and performed **unit testing** using **SoapUI**.

Client: Bank of America

- For this project, I developed a solution for **Audit Compliance** to log **NPI data** user activities. I built the **presentation** and **service layers** using **Spring Boot** and **Servlets**, implementing **SLF4J** logging for various levels of information. I used **JIRA** for **issue tracking** and performed **unit testing** with **JUnit** to ensure the solution met compliance requirements.

EDUCATION:

- Bachelors in Information technology from Calcutta Institute of Engineering and Management
