

Pruthvi Dudam *Software Developer*

pruthvidudam0926@gmail.com • 512-705-5240 • Austin, USA • LinkedIn

PROFILE

Experienced Software Developer with over 4 years of expertise in designing, developing, and deploying scalable applications using modern JavaScript frameworks, backend technologies, and database solutions. Proficient in leveraging tools and technologies like React, Node.js, Express.js, Spring Boot, MongoDB, PostgreSQL, and Redis to create robust, user-centric web solutions. Skilled in building and integrating RESTful APIs, microservices, and cloud platforms such as AWS, Azure, and Google Cloud. Experienced in implementing CI/CD pipelines with tools like Jenkins, GitLab, and Docker. Adept at system design, third-party API integrations, and applying DevOps practices to deliver innovative, scalable, and maintainable solutions. Dedicated to utilizing cutting-edge technologies to align with evolving industry standards and business needs.

SKILLS

Front-end Technologies:

HTML5, CSS3, JavaScript, React.js, Angular, Vue.js, Bootstrap, jQuery, AJAX, Redux, TypeScript

Database Technologies:

PostgreSQL, MySQL, MongoDB, SQL Server, Oracle, Redis, Firebase, Cassandra

Back-end Technologies:

Java, Node.js, Python, R, Django, FastAPI, Express.js, ASP.NET, Flask, PHP, MVC Framework, SOAP, RESTful APIs, SpringBoot, Maven, Micro-services

Tools and Technologies:

Git, Visual Studio Code, Docker, Kubernetes, AWS, Heroku, Google Cloud Platform, Microsoft Azure, Apache, Nginx, Swagger, Postman, Selenium

PROFESSIONAL EXPERIENCE

Software Developer, *General Motors*

10/2022 – present | Austin, USA

- Developed a user interface utilizing Angular and Bootstrap, implementing complex forms and validations through Angular 4 Reactive Forms and Form Builder.
- Extensively developed controllers, interfaces, and implementation classes leveraging the Spring MVC framework, integrating Spring Boot-based microservices via REST.
- Gained experience in upgrading and migrating various versions of the Mongo database across diverse platforms. Designed and developed tailor-made Mongo applications to address client-specific requirements and created documents in MongoDB.
- Actively participated in Agile methodology, engaging in code reviews, pair programming, and providing feedback to the team to ensure compliance with SAFe Agile and coding standards.
- Optimized application performance by conducting comprehensive code refactoring and caching strategies, resulting in a 35% reduction in API response time, improving overall user experience and system reliability.
- Facilitated seamless application deployments by implementing Docker containerization and Kubernetes orchestration, enabling consistent and efficient deployments across multiple environments and reducing deployment errors by 25%.
- Designed and deployed scalable cloud infrastructure using Azure services, including Azure App Services and Blob Storage, to support high-traffic applications, ensuring 99.9% uptime and accommodating 1,000+ concurrent users.
- Proactively optimized server configurations by utilizing load balancers and caching mechanisms, leading to a 20% improvement in server response times and enhancing the overall performance of customer-facing applications.

Software Developer, *Honey Well*

01/2021 – 09/2022 | Austin, USA

- Collaborated with the back-end team to integrate multiple RESTful APIs for seamless interaction with GM's third-party services.
- Implemented validation features to protect dealer-specific information, resulting in a 40% increase in system robustness and the development of authenticated pages for dealers.
- Worked alongside the QE Automation team to develop regression test suites for Loyalty applications, achieving a 45% reduction in testing time and facilitating quicker production deployment.
- Automated deployment pipelines using Azure DevOps and Jenkins, streamlining code integration and deployment processes, reducing deployment times by 30% and ensuring consistent delivery across multiple environments.
- Implemented cloud-based storage solutions using Google Cloud Platform, optimizing data accessibility and security while reducing storage costs by 20%, supporting seamless operation for over 500+ active users.
- Enhanced application monitoring and error tracking with tools like Splunk and Sentry, enabling proactive issue resolution and reducing production incidents by 25%, improving system reliability and user satisfaction.
- Integrated serverless architecture using AWS Lambda, enhancing application scalability and reducing infrastructure costs by 15%. This approach improved the handling of dynamic workloads and optimized resource utilization for better performance and efficiency.

EDUCATION

Bachelor of Science, *Arizona State University*

Computer Science

01/2018 – 12/2021 | Tempe, USA
