

ROHITH DOMMATA

JAVA DEVELOPER

Phone: +1 (203) 220-1021 | **Email:** dommatarohith26@gmail.com.com

PROFESSIONAL SUMMARY:

I am a skilled Java Developer with over 4+ years of experience in building robust, scalable backend solutions. I specialize in developing APIs and services using Java, ensuring high performance and maintainability. My expertise includes working with frameworks like Spring Boot, Hibernate, and RESTful services to create efficient, secure applications that drive business growth. With a strong focus on delivering clean, optimized code, I consistently contribute to backend development projects that enhance system reliability, streamline operations, and improve overall user experiences.

TECHNICAL SKILLS:

- Programming Languages:** Java, JavaScript, SQL, Python, C, C++, Bash
- Frameworks & Tools:** Spring Boot, Hibernate, JUnit, Maven, Gradle, GoogleTest, ClearCase, Power BI, Tableau
- Backend Development:** Microservices, RESTful APIs, SOAP, Modular Design, Scalable Systems, Robust Architecture
- Frontend Development:** HTML5, CSS3, JavaScript, TypeScript, ReactJS, Angular, Bootstrap, CSS Grid, Flexbox
- Cloud & DevOps:** AWS (EC2, S3, RDS), Docker, Kubernetes, Jenkins, Terraform
- Databases:** MySQL, PostgreSQL, MongoDB, Oracle
- Version Control & CI/CD:** Git, GitHub, GitLab, Bitbucket, Jenkins, CircleCI
- Methodologies & Testing:** Agile, Hybrid Testing, Unit Testing, On-Target Testing
- Collaboration & Communication:** Jira, Confluence, Trello, Slack, Microsoft Teams, Strong English Communication Skills, Customer Interaction
- Process Improvement:** Continuous Process Improvement, SDLC Optimization

EDUCATION:

- Bachelor of Technology (B.Tech.)** July 2020
Jawaharlal Nehru Technological University, India
- MS in Computer Science** Jan 2023
US Sacred Heart University Fairfield, CT

PROFESSIONAL EXPERINECE:

- Deloitte- TX** Feb 2023 – Present
Java Developer
 - Designed and developed RESTful APIs using Java Spring Boot and JAX-RS to enable seamless communication between microservices, enhancing system modularity and scalability, which resulted in a 30% improvement in system integration efficiency.
 - Actively participated in peer code reviews and utilized SonarQube and FindBugs for static code analysis, ensuring adherence to best coding practices and improving code quality, resulting in a 25% reduction in technical debt and 40% fewer production bugs.
 - Managed database schema design and query optimization for relational databases like MySQL and PostgreSQL, improving performance through indexing, normalization, and fine-tuning SQL queries, leading to a 30% faster data retrieval time.
 - Collaborated with DevOps teams to automate deployment pipelines using Jenkins, Docker, and Kubernetes, reducing manual deployment errors by 50% and accelerating delivery cycles by 35% through enhanced CI/CD automation.
 - Developed and maintained scalable backend services using Java, Spring Boot, and Hibernate, applying design patterns such as Singleton, Factory, and DAO, which increased the system's ability to handle 10,000+ concurrent users without performance degradation.
 - Integrated frontend components built with ReactJS and Angular with backend services via RESTful APIs, enabling real-time updates and improving user interaction speeds by 20%, enhancing the overall application responsiveness.
 - Partnered with UX/UI designers to implement design mockups and wireframes using ReactJS, ensuring pixel-perfect accuracy and alignment with client requirements, improving user satisfaction by 15% based on client feedback.
 - Leveraged Bootstrap, CSS Grid, and Flexbox for responsive design and efficient layout management, ensuring cross-device compatibility, and achieving a 25% increase in mobile traffic due to improved mobile responsiveness.
 - Deployed applications on AWS Cloud using services such as EC2, S3, and RDS, ensuring high availability, fault tolerance, and auto-scaling, which contributed to achieving 99.9% uptime and a 40% reduction in downtime during incidents.
 - Implemented CI/CD pipelines using Jenkins and Docker, reducing deployment times by 40%, speeding up releases, and cutting down overall cycle time for feature releases by 30%.
 - Conducted unit testing and integration testing with JUnit and Mockito, achieving 95% test coverage, identifying and

fixing 20% more bugs early in the development lifecycle, improving overall software reliability and stability.

TCS, Bangalore, India

Java Developer

Feb 2021 – Jun 2022

- Engineered and deployed RESTful APIs using Java Spring Boot and JAX-RS, facilitating effective communication between distributed systems, enhancing modularity, and enabling real-time data exchange between services.
- Participated in peer code reviews and utilized SonarQube for static code analysis, ensuring adherence to coding standards, reducing technical debt, and improving performance and maintainability of the codebase.
- Designed database schemas and optimized SQL queries for MySQL and PostgreSQL, ensuring data integrity and improving data retrieval performance by 30% through indexing and query optimization.
- Collaborated with DevOps teams to automate deployment processes using Jenkins, Docker, and Kubernetes, reducing deployment times and improving the CI/CD pipeline for faster, more reliable releases.
- Developed and maintained scalable backend applications using Java, Spring Boot, and Hibernate, ensuring high performance and reliability under heavy traffic conditions with low latency and resource optimization.
- Integrated frontend components built with ReactJS into backend services via RESTful APIs, enabling smooth data exchange and real-time application updates, improving the overall user experience.
- Worked closely with UX/UI designers to convert design prototypes into functional, responsive user interfaces using ReactJS, Bootstrap, and CSS Grid, ensuring cross-platform compatibility and mobile responsiveness.
- Deployed and managed applications on AWS using EC2, S3, and RDS to achieve high availability (99.9% uptime) and fault tolerance, ensuring robust production environments with minimal downtime.
- Developed and maintained CI/CD pipelines with Jenkins, Docker, and Kubernetes, optimizing deployment processes and reducing deployment times by 40%, ensuring faster and more efficient software delivery.
- Performed comprehensive unit and integration testing using JUnit and GoogleTest, achieving 95% test coverage, detecting issues early in the development lifecycle, and enhancing overall software quality and reliability.

Wipro, Bangalore, India

Software Developer Associate

Oct 2020 – Jan 2021

- Designed, developed, and deployed secure RESTful APIs using Java Spring Boot and JAX-RS, ensuring seamless data exchange between frontend and backend systems, improving user experience and performance.
- Enhanced MySQL and PostgreSQL database schemas by implementing stored procedures, query optimization, and indexing, resulting in a 30% improvement in data retrieval performance.
- Integrated AWS services (S3, RDS, Lambda) into the application architecture to support scalable cloud solutions, enabling dynamic handling of varying business requirements and workloads.
- Led the migration of monolithic applications to microservices architecture using Spring Cloud and Docker, improving system modularity, reducing deployment downtime, and increasing flexibility for future updates.
- Conducted rigorous unit testing and test-driven development (TDD) using JUnit and Mockito, achieving a 40% reduction in production defects and enhancing overall code quality and application stability.
- Collaborated with Agile teams in scrum ceremonies, including sprint planning and retrospectives, contributing to improved team workflows and achieving a 15% increase in sprint delivery efficiency.
- Led the migration of legacy monolithic systems to microservices-based architecture using Docker, Spring Boot, and Kubernetes, reducing deployment times by 50% and improving application reliability.
- Automated deployment pipelines using Jenkins and AWS CodePipeline, ensuring seamless continuous integration and delivery (CI/CD) for faster and more reliable application releases.
- Actively gathered and analyzed business requirements from clients, providing technical solutions aligned with business objectives, which contributed to a 95% customer satisfaction rate.

Trigent Software, Hyderabad, India

Software Developer Intern

Apr 2020 – Sept 2020

- Developed and maintained RESTful APIs using Node.js and Express.js, improving performance and reducing API response times by 20%.
- Actively participated in Agile sprints, contributing to daily stand-ups and sprint planning, enhancing team collaboration and boosting productivity by 15%.
- Utilized Git and GitHub for efficient version control, streamlining code management and facilitating collaborative development across the team.
- Assisted in automating CI/CD pipelines using Jenkins and GitLab CI, improving deployment consistency and reducing release times.
- Worked with SQL and NoSQL databases (MySQL and MongoDB) to design and optimize database schemas for improved performance and scalability.
