

SUMMARY

Experienced Cloud/DevOps Engineer with 4+ years of expertise in designing and automating secure, scalable infrastructures across AWS, Azure, and GCP. Skilled in implementing CI/CD pipelines and automating workflows using Jenkins, GitHub Actions, Terraform, Ansible, and Puppet. Proficient in containerization with Docker and Kubernetes for efficient microservices management, alongside monitoring and logging with Prometheus, Grafana, and ELK Stack. Strong scripting expertise in Python and Bash to optimize cloud operations, with hands-on experience in AWS services like EC2, S3, VPC, and RDS. Adept at Unix/Linux system administration, web server management (Apache Tomcat, Nginx), and networking concepts, including IP addressing, VLANs, and TCP/IP protocols.

SKILLS

Methodologies: SDLC, Agile, Waterfall

Programming & Scripting Languages: C, C++, Python, Java, SQL, PowerShell, Ruby, PL/SQL, Node.js, Bash, Unix/Linux Scripting

DevOps & Automation Tools: Docker, Kubernetes, Terraform, Ansible, Puppet, Chef, Jenkins, GitHub Actions

CI/CD Tools: Jenkins, Git, GitLab, Bitbucket, Maven, Gradle, Ant

Cloud Platforms: AWS (EC2, S3, RDS, VPC, Lambda, CloudFormation, IAM), Azure, GCP, Oracle Cloud

Monitoring & Logging: Prometheus, Splunk, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana)

Databases: MySQL, PostgreSQL, MongoDB, SQL Server, Oracle, AWS RDS, IBM DB2

Web Servers: Apache Tomcat, Nginx

Networking Protocols & Concepts: TCP/IP, UDP, IP addressing, HTTP, SSL/TLS, DHCP, ARP, ICMP, DNS, NAT, PAT, ACL, LAN, WAN

Routing & Switching: RIP, OSPF, EIGRP, BGP, Static Routing, HSRP, VLAN, VTP, STP, RSTP

Tools: Cisco Packet Tracer, GNS3, Wireshark, TCPDUMP, VirtualBox, VMware Workstation, Winscp, FileZilla, Putty SSH, ServiceNow, Swagger, Postman, SOAP, Jira

Operating Systems: Windows, Linux (Ubuntu, Red Hat, CentOS)

EXPERIENCE

Unum, USA | Cloud/DevOps Engineer

Jan 2024 - Current

- Applied Software Development Life Cycle and Agile methodologies to manage cloud and DevOps projects, ensuring efficient development cycles and timely deliveries.
- Automated configuration management and infrastructure provisioning using Ansible, Puppet, Bash, Git, Jenkins, GitHub Actions, and Terraform, resulting in a 40% improvement in deployment speed and a 30% reduction in manual intervention.
- Worked with Azure and GCP, leveraging services like Lambda, RDS, and VPC to design and maintain cloud-native architectures.
- Implemented monitoring and logging solutions using ELK Stack (Elasticsearch, Logstash, Kibana) and Splunk to track system performance and troubleshoot issues effectively.
- Controlled databases like MS SQL Server and AWS RDS, managing database instances and backups to ensure data availability.
- Accomplished Linux environments focusing on system calls, filesystems, and configuration management using YAML and Nagios, improving system reliability by 35% and reducing downtime by 15%.
- Administered Nginx web servers, ensuring the availability and security of web applications deployed on cloud infrastructure.
- Designed and maintained routing and switching configurations, leveraging protocols such as RIP, OSPF, EIGRP, and BGP to ensure high availability and scalability of network infrastructure.
- Utilized tools like Cisco Packet Tracer and GNS3 to simulate and test network configurations before production deployment, minimizing downtime and improving reliability.

IBM, India | Cloud/DevOps Engineer

Jun 2019 - Jul 2022

- Instigated Waterfall methodology in managing cloud infrastructure projects, ensuring structured delivery and adherence to project timelines.
- Orchestrated containerized applications using Docker and Kubernetes with Terraform for infrastructure automation, achieving a 40% increase in scalability and reliability of deployment processes.
- Managed CI/CD pipelines to enable Continuous Integration (CI) and Continuous Delivery (CD) across multiple cloud platforms, resulting in a 30% reduction in deployment times.
- Organized with AWS services like EC2, S3, VPC, RDS, and Lambda while configuring and maintaining Apache Tomcat servers to ensure secure and high-availability cloud environments.
- Deployed monitoring systems with Prometheus and Grafana while developing Python and Bash scripts, streamlining tasks and improving infrastructure performance by 25%.
- Deployed and managed network segmentation and VLANs, using HSRP, VTP, and STP to enhance network performance and prevent bottlenecks.
- Configured and optimized networking protocols including TCP/IP, UDP, HTTP, DHCP, and DNS to ensure secure and efficient communication across cloud and on-premises environments.
- Directed MySQL databases and managed Ubuntu and Red Hat systems, focusing on backups, performance tuning, security, and automation using Ansible Playbooks and Chef Cookbooks.

EDUCATION

Master of science, Data Science | New Jersey Institute of Technology (NJIT), New Jersey, USA

May 2024

Bachelor of Technology, Computer Science and Engineering | Lovely Professional University, Punjab, India

Sep 2021
