

SUMMARY

- Have more than 6 years of IT experience in database development, design, analysis and support various applications using MS SQL Servers 2022, 2019, 2017 and 2016 versions. Have been involved in development, unit testing, data validation and application production deployment.
- Well versed in all Software Development Life Cycle (SDLC) phases of specifically waterfall and Agile Scrum methodology.
- Translated business requirements to physical data models, designed data element & created quality sets of metadata to achieve strategic goals.
- Strong experience in T-SQL writing proven, scalable code using stored procedures, various types of joins, subqueries, user defined function, analytical functions, aggregate function, cross/outer apply, group by, over partition by, cursors, merge, try/catch, dynamically generated scripts, triggers, common table expressions, scalar/table valued functions, create/alter tables/columns, views, primary/foreign key constraints, and indexes.
- Performed complex queries, data scrubbing, data gathering, data consultation & data analyzing on large volume of data sets.
- Experienced in designing and developing databases with Normalization up to 3NF in Relational Database Management Systems..
- Ability to handle Microsoft SQL Server Database Administration including planning, backup, and recovery strategies.
- Experience in configuring and managing Linked Servers, data transfer between SQL Server and other heterogeneous relational databases such as Oracle and DB2.
- Performed complex queries, data scrubbing, data gathering, data consultation and data analyzing on large volume of data sets.
- Experienced in the development and implementation of Data Warehouse solutions: Data Warehouses and Data Marts and ETL processes and designing of Star and Snowflake data models Schema.
- Experienced in Enterprise Data Warehouse environments, including experience with dimension modeling and performance optimization.
- Experienced in designing SSIS packages for integrating data using OLEDB connection from heterogeneous sources (Excel, CSV, flat file, OLEDB) by using multiple transformation provided by SSIS such as Data Conversion, conditional split, merge, union all etc.
- Designed and developed OLAP cubes using SQL Server Analysis Services (SSAS) and leveraging the advanced BI functionality of SQL Server.
- Experienced in Tuning SQL queries and T-SQL queries, MDX, & improving the performance of the queries.
- Deployed SSIS Package and SQL objects into Production and used Package configuration to export various package properties to make package environment independent.
- Designed, developed, and deployed reports using SQL Server Reporting Services (SSRS) reports in support of productivity enhancements
- Developed, maintained, and supported operational reports, dashboards and scorecards using Microsoft Power BI through relational database queries.
- Worked with Financial companies for application related pricing and security applications.
- Good verbal and written communication skills.
- A team player and able to lead and initiate.

SKILLS & EXPERTIES

Databases Tools:	SQL Enterprise Manager, Query Analyzer, SQL Server Management Studio, Business Intelligence Development Studio.
ETL Tools:	SQL Server Integration Service (SSIS)
Analytical Tools:	SQL Server Analytical Service (SSAS)
Reporting Tools:	SQL Server Reporting Services (SSRS)
Database:	MS SQL Server 2022, 2019, 2017 and 2016, MS Access
Programming:	T-SQL, PL / SQL. C# (Limited to SSIS Scripting using C#)
Operating Systems:	Windows Server 2022, 2019, 2016, Windows 10/ XP/Vista
Other Tools:	MS Office Suite (Microsoft Word, Power Point, Microsoft Excel)

EDUCATION

Master's Degree

EXPERIENCE

Sunnet Inc. - San Jose, California

SQL/BI Developer | Aug 2023 to Present

Responsibilities:

- Collaborated with team leads and requirements analysts to gather and analyze project requirements for IT applications.
- Designed and developed ETL packages using SQL Server Integration Services (SSIS) to load the data from SQL server, XML files to SQL Server database through custom C# script tasks.
- Involved in Planning, Defining and Designing database based on business requirements and provided documentation.
- Conducted research and data analysis related to software systems, generating insightful reports from application data.
- Developed, enhanced, and maintained IT applications, ensuring optimal functionality and performance.
- Designed and updated database objects, including tables, views, stored procedures, functions, and packages.
- Modeled and designed databases, ensuring efficient data storage and retrieval.
- Executed Extract, Transform, Load (ETL) processes for data conversion and migration.
- Documented Database Entity Relationship Diagrams (ERDs) and Data Dictionaries to support application development.
- Designed ETL packages for extracting the data and load into the appropriate Dimension and Fact tables in the Data Warehouse and Data Mart databases using SQL Server Integration Services (SSIS).
- Designed SSIS Package step process to load data, validate data and Recommending task to resolve performance issue with loading data into the Data Warehouse.
- Involved in development of Incremental Load Process using SSIS Packages and various Transformation and data cleansing activities using various Control Flow and Data Flow tasks in SSIS packages during data migration.
- Designed Console application to generate Single .CSV and text file from Different relational Database table using SSIS and C#.
- Involved in Unit testing in SSIS Packages, Query verification in SSRS and Stored Procedures.
- Scheduled jobs to run the SSIS packages on daily basis using SQL Server Agent.
- Set up alerting system by using performance counters for monitoring system performance.

- Used SQL Profiler to monitor the server performance, debug T-SQL and slow running queries.
- Managing of users including creation/alteration, grant of system/db. Roles and permission on various Database objects.
- Responsible for automation of maintenance jobs, locks and indexes configurations.
- Administered SQL Server security, SQL Server automatic email notification.
- Managed SQL user logins, database user accounts, server roles, database roles and its permissions. Handle lock scenarios.
- Handled PowerBI dataset refresh through Azure Data Factory pipeline's Web Activity tasks.
- Developed Power BI Dashboards by implementing multi source data integration, Utilized DAX language to define Measures, Slicers and Filters etc.
- Tested and deployed software code for IT applications, ensuring quality and compliance with specifications.

Environment: MS SQL Server 2022, Oracle, SSAS, SSIS, T-SQL, C#, Microsoft Excel, Microsoft Visual studio 2022, Windows Server 2022.

Regions Bank - Miami, Florida

SQL/ETL Developer | Sept 2021 to July 2023

Responsibilities:

- Coordinated with Business Analysts and customers to develop business requirements and specifications documents using Microsoft word and Power Point.
- Implemented Waterfall SDLC and Ralph Kimball Data Warehouse methodology- from analysis to production implementation, with emphasis on identifying the source and source data validation, implementing business logic and used transformations as per the requirement in developing ETL packages and loading the data into the target.
- Maintained business intelligence models to design, develop and generate both standard and ad-hoc reports using SSMS, SSIS, SSRS and Microsoft Excel.
- Worked with high volume datasets from various sources like Oracle, Text files, Relational Tables and xml targets. Responsible for mandatory checks, date field checks and number field checks in ETL packages.
- Incorporated error logging logic in all the packages. Involved effectively with the users regarding the source system problems.
- Involved in the troubleshooting and resolved complex technical issues. Involved in the performance tuning of the databases.
- Created Database Objects - Tables, Indexes, Views, Stored Procedures and User defined functions according to the requirements of the project.
- Analyzed source data to determine the data model and ETL solution that will meet business requirements.
- Created complex SSIS packages using transformations /tasks and designed packages with error handling and package logging that stores the logging results in SQL table and flat files on error, on warning, on task failed event types.
- Performed data warehouse design and modelling according to established standards.
- Developed, maintained, and supported ETL processes using Microsoft SSIS.
- Review, resolve and edit data to ensure accuracy and then convert non-Excel files to Excel format, sort, filter, and create pivot tables using Excel.
- Data cleaned and data manipulated such as Concatenation, LEN, Find & Replace, Filter & Sort, Conditional Formatting, Index Match, Remove Duplicates, Logic Functions, and Short-Cut functions were done using Microsoft Excel.
- Scheduled and maintained nightly and weekly loads of data by creating the corresponding job tasks.
- Generated reports using SSRS for internal and external customers for business performance monitoring and business decision making.
- Involved in creating multiple parameterized stored procedures which were used by the reports to get the data.
- Designed and developed dashboards and reports using Microsoft Excel and SSRS on a daily, week-to-date, month-to-date, quarter-to-date, and year-to-date basis to track loans given out.

Environment: MS SQL Server 2019/17, SSIS, SSAS, SSRS, C#, MDX, Windows Server, 2016, MS Visual Studio.

American Bank - Dallas, TX

SQL /BI Developer (SSIS, SSRS, SSAS) | Feb 2019 to Aug 2021

Responsibilities:

- Involved in Planning, Defining and Designing database based on business requirements and provided documentation.
- Interacted with Business Analyst, Subject Matter Experts and Stakeholders to understand the business needs and documented the complex business requirement into simpler one.
- Designed, monitored, and extended data warehouse and analytics architecture to meet company business analysis and reporting needs.
- Programmed store procedures to generate account statements for different types of accounts to cater complex business rules.
- Developed T-SQL code to create custom user defined Tables, Views, and triggers and stored procedures to handle meta data and custom logging.
- Developed ETL and data warehousing solutions using Microsoft SQL Server and
- Microsoft SQL Server Integrations services.
- Created SSIS packages for File Transfer from one location to the other using FTP task.
- Built SSIS packages, Package Configuration, ETL Process, deployed Packages, and enabled new packages within companies' framework.
- Extracted data from Excel files, Flat files, XML Files, and loaded data into Flat file and OLEDB destination in SSIS.
- Loaded Excel spreadsheet and flat files into SQL server for further Data Analysis and Reporting by using multiple transformations provided by SSIS such as Data Conversion, Conditional Split, Bulk Insert, merge and union all.
- Performed full load, incremental load and remigration loading through parent child packages in SSIS.
- Maintained and configured packages with checkpoints, breakpoints, package logging, error logging and event handling to redirect error rows and fix errors in SSIS.
- Implemented error handling and event handling techniques in SSIS to ensure efficient package execution.
- Implemented OLAP (Online Analytical Processing) data warehouses (star and snowflake Schemas) and business intelligence reporting systems.
- Scheduled data warehouse jobs using SQL Server Agent jobs.
- Extensively worked with OLAP cubes to generate drill through reports in SSRS
- Developed stored procedures and triggers to facilitate consistent data entry into the database.

Environment: SQL Server 2017, SSAS, SSIS, SSRS, T-SQL, Microsoft Excel, SSMS, VS 2016, Windows Server 2019.

Sigmapharm Laboratories, LLC - Bensalem, PA

Jr. SQL Developer | Mar 2018 to Jan 2019

Responsibilities:

- Involved in Planning, Defining, designing database based on business requirements and provided documentation.
- Developed User Defined Functions for giving Scores and views for the application
- Wrote various Stored Procedures for the purpose of application development
- Created Temporary Table and Common Table Expression (CTE) for query optimization.
- Defined check constraints, rules, indexes, and views based on business requirement.
- Designed and implemented data access stored procedures and triggers for automating tasks
- Developed, monitored, and deployed SSIS packages for Dynamic ETL flow to validate, extract, transform and load data into database
- Performed Full load & Incremental load with several Dataflow tasks and Control Flow Tasks using SSIS

- Created SSIS package to Export and Import data from SQL Server to Access, Text and Excel files and Configured SQL mail agent for sending automatic mails.
- Configured Connection Manager files for SSIS packages to dynamically execute on Quality Analysis server and Production server
- Developed Parameterized, Drill-through, and Drill-down Reports to get monthly customers account details and profits using SSRS
- Involved in deploying, configuring, and managing reports using Report Manager and Report Builder
- Formatted the reports using the Global variables and expressions
- Performed job scheduling and alerts
- Designed and implemented user log in and security
- Resolved any deadlocks issues with the databases/servers on a real-time basis

Environment: SQL Server 2016, SSAS, SSIS, SSRS, T-SQL, Microsoft Excel, SSMS, VS 2013 Windows Server 2016.
