

Summary:

- Results-driven **Java Developer** with around 10 years of experience in designing, developing, and optimizing enterprise-grade applications. Highly skilled in **Java, Spring Boot, Apache Flink, Kafka, Beam, Hibernate**, and **RESTful APIs**, with a strong expertise in **microservices architecture, real-time and batch data processing, performance optimization**, and ensuring **scalability**. AWS Certified **Solutions Architect – Associate** with a proven track record in **cloud integrations, DevOps automation**, and **containerization (Docker, Kubernetes)**. Adept at **building high-performance, resilient systems** using **event-driven architecture**, with experience in **CI/CD pipeline automation** and working with **Agile methodologies**.

Technical Skills:

- **Programming Languages:** Java (1.8-21), JavaScript, SQL, Groovy, Python, Ruby
- **Frameworks & Tools:** Spring 4.X, Spring Boot 3.x, Spring Cloud, Apache Flink, Apache Beam, Kafka, RESTful, SOAP, Spring MVC, Hibernate, JPA, Struts 2, JUnit, Mockito, Eclipse, STS, IntelliJ IDEA
- **Web Development:** JSP, JSTL, HTML, CSS, JavaScript, AngularJS
- **Cloud Platforms:** AWS (S3, Lambda, etc.), Kubernetes, Docker, Azure
- **Databases:** Oracle, MySQL, MongoDB, PostgreSQL, HBase
- **CI/CD & Automation:** Jenkins, Git, Bitbucket, SVN, Maven, Groovy, Maven, Gradle, SonarQube, Checkmarx, Sonatype Nexus, HashiCorp Vault
- **Monitoring & Debugging:** Grafana, Splunk, Xmatter, PagerDuty, Datadog, App Internals
- **Event-Driven Architecture:** Spring Cloud Solace, Kafka, RabbitMQ
- **Agile Tools & Methodologies:** Agile, Scrum, Jira, Service Now, Confluence

Professional Experience:

Synechron Technologies (HSBC Bank) Role: Lead Technology

Aug 2021 to Jan 2025

- **Architected and developed** a Generic Reconciliation Service using **microservices architecture** with **Spring Boot, Spring Cloud**, and **Netflix Eureka**, leveraging **Apache Beam** and **Spark** for scalability and high-performance, **reducing development time by 60-70%** for new reconciliations.
- **Led the development** a **rule engine service** for **trade compliance**, automating processes and **reducing manual efforts by 50%**.
- Built a **high-performance data processing system** for **real-time report generation** using **Apache Flink** and **Kafka**, processing millions of records for the GSIB report, cutting processing time by **60%**.
- **Designed and implemented** an **Event-Driven Architecture** using microservices for **modularity, scalability**, and **high availability**, migrating from legacy technologies such as **Oracle** and **Control-M**, leading to a **70-80% reduction in operational costs**.
- **Built real-time and batch data pipelines** with **Apache Beam** and **Beam SQL**, improving data processing efficiency and reducing latency by **40%**.
- **Developed** an **event-driven control processing system** with **Spring Cloud Solace**, ensuring system **resilience** and **high availability**.
- **Built real-time and batch data pipelines** using **Apache Beam** and **Beam SQL**, improving data processing efficiency and reducing latency by **40%**.
- **Integrated services with AWS S3, APIs**, and **FDS caching**, optimizing cross-platform data flow and ensuring seamless data exchange.
- **Optimized Spark job execution**, improving resource utilization by **30%** and reducing processing time by **40%**.
- **Implemented CI/CD pipelines** using **Jenkins** and **Groovy scripts**, streamlining deployments, automating testing, and reducing release cycles for services.
- **Monitored and optimized system performance** using **Grafana, Prometheus**, and **Datadog**, ensuring real-time visibility and resource optimization.

- **Collaborated closely with stakeholders and clients** to gather requirements, ensuring alignment between business goals and technical implementations enabling faster time-to-market for new requirements.
- Implemented **OAuth2** and **JWT** for secure authentication and authorization in **microservices** architecture, ensuring data protection and compliance with industry standards.
- Designed and implemented **RESTful APIs** using **Spring Boot** and **Swagger**, ensuring clear API documentation and seamless integration across microservices.
- Performed in-depth **performance tuning** on **SQL** queries and **NoSQL** databases, reducing response times by **20-25%**.
- **Implemented Test-Driven Development (TDD)** practices using **JUnit** and **Mockito**, ensuring high code quality, reliability, and maintainability by automating unit and integration testing, reducing defect rates by 30%.
- Utilized **Docker** and **Kubernetes** for **containerization** and **orchestration**, ensuring scalable, efficient, and highly available **microservices deployments**.
- Experience in writing **Shell, Perl, Ruby** and **Python scripts** to automate the deployments.
- Managed source code using **Git** and **Bitbucket**, ensuring **version control** and collaboration among development teams.
- Led project management activities using **Jira** and **Confluence**, optimizing team workflow and ensuring efficient communication and tracking of tasks.
- **Conducted code reviews**, debugging, and performance optimization to ensure **high-quality, maintainable code**.
- **Led a team of 5-10 developers**, mentoring junior members through **code reviews** and **technical guidance** while fostering a **collaborative** and **productive team environment**. Successfully **delivered multiple projects ahead of deadlines**, enhancing **team efficiency, code quality, and client satisfaction**.

Key Projects:

- **Trade-Data-Control-Framework:**
Designed and implemented a **generic reconciliation service** using **Apache Beam** and **Spark** to efficiently reconcile datasets, reducing development time by **80-90%** and lowering operational costs by **70-80%**. Migrated from legacy infrastructure to **IKP** and **Spark Cluster** for enhanced scalability and cost efficiency.
Technologies: Apache Beam, Apache Spark, Spring Boot, Microservices Architecture, AWS S3, Git, Grafana, Agile, Scrum, Jira, Confluence.
- **Global Systematic Important Bank – Regulatory Report:**
Developed a high-performance **report-generating system** using **Apache Flink** and **Kafka**, processing millions of records daily for HSBC holdings and fixed income securities. Reduced report generation time by **50%** and improved operational efficiency by **70%**.
Technologies: Apache Flink, Kafka, Spring Boot, AWS S3, Grafana, Git, Agile, Scrum, Jira, Confluence.
- **Business-Rules-Validation (Trade-Data-Controls):**
Built a **stream data processing system** to handle large **XML trade data** and route it to downstream queues using **Kafka** and **Spring Boot**. Integrated **Redis caching** to improve performance by **50%**, and optimized **Elasticsearch queries** for a **40% reduction in search latency**.
Technologies: Kafka, Spring Boot, Redis, Elasticsearch, Jenkins, CI/CD, Git, Prometheus, Agile, Scrum, Jira, Confluence.
- **Hierarchy Mastering Service – Book & Hierarchy Management:**
Designed and developed a **Spring Boot microservice** using **Spring Cloud Solace** and integrated **HBase** and **MongoDB** for real-time data processing and delta updates, ensuring **data consistency** across services.
Technologies: Spring Boot, Spring Cloud Solace, HBase, MongoDB, Microservices Architecture, Git, Agile, Scrum, Jira, Confluence.

- **Led** the development of **Unifree**, a **comprehensive payment solution** for educational institutions, using **Java, Spring Boot, Hibernate, Oracle, and AWS**. Improved fee payment tracking and processing, resulting in a **30% reduction** in payment processing time and a **20% increase** in transaction accuracy.
- **Designed and implemented Auto Settlement Mode for Merchant Payments**, automating daily settlements and reducing errors by **15%**, which significantly enhanced the efficiency of merchant transactions.
- **Refactored** an existing legacy codebase for better maintainability and efficiency, improving **system stability** by **25%** and simplifying future updates and scaling.
- **Developed features** for the **Eazypay Admin Portal & Dashboard**, utilizing **AngularJS** for UI components and **Spring Boot & Hibernate** for backend, improving transaction tracking and user experience by **35%** and ensuring smooth monitoring of merchant payments.
- Integrated **secure payment gateways** in compliance with **PCI DSS** standards, improving system reliability and reducing potential vulnerabilities.
- **Optimized** transaction processing speeds by fine-tuning **MySQL** database queries, improving transaction latency by **50%** and enhancing system scalability.
- Implemented **Continuous Integration (CI)** and **Continuous Delivery (CD)** pipelines with **Jenkins**, cutting deployment time by **25%** and improving release cycle efficiency by **30%**.
- Deployed **microservices** in **AWS EC2** containers, ensuring **high availability, scalability, and resilience** in cloud environments.
- Applied **Test-Driven Development (TDD)** methodology, reducing **defect rates by 30%**, while ensuring **high-quality, reliable code**.
- Collaborated with cross-functional teams in an **Agile** environment, conducting **Sprint Planning, Scrum Meetings**, and delivering features on time with a focus on **iterative delivery** and **continuous improvement**.

Key Projects:

- **Unifree – Comprehensive Payment Solution for Educational Institutions:**
Developed an online fee payment solution enabling secure student fee transactions using **Spring Boot, Hibernate, and Oracle**. Integrated **AWS services** such as **Lambda, S3, DynamoDB, and SNS** for building a **serverless application**, reducing infrastructure costs by **40%**.
Technologies: Java, Spring Boot, Hibernate, Oracle, AWS (DynamoDB, Lambda, S3, EC2, SNS), Jenkins, Docker, TDD, Agile, CI/CD, Serverless, Microservices.
- **Eazypay – Unified Payment Solution:**
Designed and developed a **multi-payment solution** for merchants using **Spring Boot, Redis, Hibernate, and MySQL** to handle **UPI, credit/debit cards, and wallet payments**. Implemented **RESTful APIs** and integrated **payment gateways**, ensuring **secure payment workflows**. This system improved **user transaction experience** and **payment processing speed** by **35%**.
Technologies: Java, Spring Boot, Hibernate, MySQL, Redis, WebSphere, RESTful APIs, Payment Gateway Integration, Agile, Scrum, Microservices.

- **Developed and enhanced user interfaces** using **JSP, JSTL, HTML, and CSS**, improving UI responsiveness and accessibility.
- **Implemented Spring MVC framework**, ensuring efficient communication between presentation and business layers, enhancing maintainability.
- **Led the migration from Struts 1.2 to Struts 2**, improving **application security, performance, and scalability** while ensuring compliance with modern security standards.

- **Optimized backend components**, reducing system response time by **20%** and improving data processing efficiency.
- **Conducted unit testing and debugging** to enhance application reliability, reducing production issues by **30%**.

Key Projects:

- **Legacy System Modernization – Core Banking Application:**
Led the migration from **Struts 1.2 to Struts 2**, as part of a **core banking application modernization initiative**, significantly enhancing **security, performance, and maintainability**. This involved refactoring a **monolithic codebase**, redesigning modules for **better scalability**, and integrating **Spring MVC** to optimize application-layer interactions. **Optimized Oracle database queries**, reducing **transaction processing time** and improving **data retrieval efficiency**. Conducted **impact analysis, risk assessment, and regression testing**, ensuring a **seamless transition with minimal downtime**. Implemented the **JUnit-based unit testing**, strengthening **code quality** and reducing **defect leakage into production**, contributing to a **30% improvement in system stability**.
Technologies: Java, Struts 1.2, Struts 2, Spring MVC, JSP, JSTL, Hibernate, Oracle Database, JUnit, and Apache Tomcat.

Experis IT Pvt. Ltd. (IBM - Hertz)

Role: Software Developer

May 2016 to May 2018

- Developed and maintained the **DASH (Hertz – Rent a Car)** global online **car rental portal**, enabling seamless **vehicle rental services** and **contract generation**
- Enhanced the **Fleet Management System** by optimizing **vehicle identification (VIN)** processes, ensuring efficient **inventory management**.
- Conducted **comprehensive analysis, development, and unit testing** to ensure **high-quality and error-free application releases**.
- Provided **solutions to improve functional and non-functional requirements**, optimizing **application performance and stability**.
- Integrated **Log4j logging framework** for better **application monitoring, debugging, and error tracking**.
- Utilized tools like **Panorama** and **App Internals** to create **performance monitoring dashboards** for system health tracking.

Key Projects:

- **DASH – Rent a Car:**
As part of **Hertz's car rental system modernization**, played a key role in enhancing the **DASH** platform by integrating multiple core systems, including the **Rate Engine, Fleet System, FT Engine, and Credit Authorization System**. Developed the **Dash-Reinstate ID** feature, which automated **user account suspension and reactivation**, which streamlined **user access control**. Contributed to optimizing the **Fleet Management System**, focusing on **vehicle identification processes**. Improved **application monitoring and performance** by leveraging **Log4j, Panorama, and App Internals**. By implementing **best coding practices** and ensuring **rigorous testing**, enhanced **system stability**, leading to more **efficient car rental operations globally**.
Technologies: Java, Spring MVC, Hibernate, JSP, JSTL, HTML, CSS, JavaScript, Log4j, Oracle, JUnit, Panorama, App Internals, Struts 2.

Education:

- **Bachelors in Electronics and Communication Engineering** - Sep 2010 to Apr 2014 JNTUA, India.
