Contact No : +1 (469) 456 6665

PROFESSIONAL SUMMARY

- Over 10 years of experience as an Application Developer and coding with analytical programming using Python, PySpark, Flask, AWS, SQL.
- Have experience as a Web/Application Developer and coding with analytical programming using Python, Django, Flask, AWS, SQL.
- Good experience of software development in Python (libraries used: Beautiful Soup, NumPy, SciPy, matplotlib, Panda's data frame, network, urllib2, MySQL dB for database connectivity) and IDEs - sublime text, Spyder, PyCharm
- Extensive knowledge in Python, SQL, Unix, Linux and Object Oriented Design and Programming concepts.
- Experience in writing REST APIs in Python for large-scale applications.
- Architected and developed Python and Django for the backend development of application and PostgreSQL for the database.
- Developed Python-based ETL pipelines to extract, transform, and load data into Snowflake using Snowflake Connector for Python.
- Optimized Snowflake queries for better performance, reducing execution time and improving resource efficiency.
- Developed dynamic frontend applications using Vue.js and integrated them with Python-based Flask/Django backends via RESTful APIs.
- Designed and implemented Vue.js components for interactive dashboards displaying real-time data from Python APIs.
- Automated data ingestion into Snowflake from S3, Azure Blob Storage, and GCS using Python and Snowflake's staging tables.
- Orchestrated multi-service environments using Docker Compose, enabling seamless local development and integration testing.
- Integrated Docker into CI/CD pipelines (GitHub Actions / GitLab CI / Jenkins) for automated build, test, and deployment workflows.
- Designed and deployed containerized Python applications using Docker and orchestrated with Kubernetes in cloud-native environments.
- Developed Helm charts for managing Kubernetes deployments, ensuring consistent and repeatable application setups.
- Developed and deployed data pipelines using Python (Pandas, NumPy) to clean, transform, and analyze large datasets
- Created custom Docker networks to facilitate communication between microservices (e.g., API, DB, cache).
- Containerized Python applications using Docker for consistent development and production environments.
- Designed full-stack web applications with Angular frontend and Python backend.
- Applied JWT-based authentication for secure API communication between Angular and Python services.
- Experienced on using source control applications like Git, GitHub, Bitbucket for code management.
- Experienced with WAMP (Windows, Apache, MySQL, and Python/PHP) and LAMP (Linux, Apache, MySQL, and Python/PHP) Architecture.
- Collaborated with UI/UX designers to translate wireframes and mockups into functional and accessible features, ensuring consistent user experience across devices.
- Built a RESTful API using Golang, enabling faster response times and concurrent user handling.

- Leveraged Golang concurrency primitives (goroutines, channels) to process high-volume streaming data in real-time.
- Experienced Python Full Stack Developer with expertise in automation, backend systems, and frontend development.
- Consumed and displayed data from backend APIs, ensuring smooth frontend-backend communication.
- Integrated Python scripts with Tableau using TabPy for advanced analytics and predictive modeling.
- Developed custom Tableau dashboards leveraging Python libraries like Pandas, NumPy, and Matplotlib for data visualization.
- Automated data extraction, transformation, and loading (ETL) processes using Python and integrated them with Tableau for real-time insights.
- Implemented secure container practices: non-root user execution, minimal base images (python:3.x-slim), and image scanning via Trivy or Docker Scout.
- Used Docker volumes and bind mounts for data persistence and improved developer productivity in local setups.
- Conducted A/B testing and gathered user feedback to iteratively improve application usability and UX flow
- Experienced Python Developer with proficiency in TypeScript for full-stack development.
- Experienced in backend development using Django/Flask and frontend development using Vue.js.
- Proficient in building interactive and dynamic web applications with Vue.js, Vuex/Pinia, and Vue Router.
- Proficient in developing interactive UI components with React.js and JavaScript (ES6+).
- Strong understanding of RESTful APIs, state management (Redux, Context API), and front-end development best practices.
- Developed and deployed serverless applications using AWS Lambda and Python.
- Integrated Lambda with AWS services like S3, DynamoDB, SNS, and SQS for event-driven workflows.
- Reduced AWS costs by optimizing function memory allocation and execution time.
- Experience integrating React with backend services built in Python.
- Strong understanding of both dynamic (Python) and static (TypeScript) typing systems
- Experience in building scalable APIs and microservices in Golang and Python
- Migrated a Python ETL pipeline to Golang, reducing execution time by 40% and improving reliability.
- Performed on Integrated data from around 40 different sources and developed data pipelines to load the data into Elasticsearch and Salesforce for the use in targeted e-mail marketing (Stone branch, AWS, S3, Hive, Elasticsearch, Redshift, Python, Spark, Salesforce), to bring dozens of millions of dollars of additional revenue.
- Configured AWS Identity and Access Management (IAM) Groups and Users for improved login authentication.
- Experience in building strong websites confirming Web 2.0 standards using jQuery, HTML5, XHTML, DHTML & CSS3 to develop valid code and table-free sites.
- Experienced with JSON based RESTful web services, and XML/QML based SOAP web services and worked on various applications using python integrated IDEs like Sublime Text and PyCharm. Using Django evolution and manual SQL modifications, able to modify Django models while retaining all data, while site was in production mode.
- Proficient in designing end-to-end web applications, APIs, and automated workflows using Python frameworks.
- Strong understanding of RESTful APIs, GraphQL, and integrating Vue.js with Python-based backends.
- Familiarity with cross-language integration between Python and MATLAB for computational and interface solutions.
- Implemented stored procedures and UDFs (User-Defined Functions) in Python to enable complex data transformations within Snowflake.
- Designed and implemented schema modeling in Snowflake, utilizing features like clustering, micro-partitioning, and materialized views for performance optimization.
- Experienced in developing end to end automation using Selenium WebDriver/RC/IDE/Grid, Unittest/Pytest, Jenkins, GHERKIN/Cucumber, Robot, ALLURE reporting, RESTful API and PostMan.

- Used Python and Django creating graphics, XML processing of documents, data exchange and business logic.
- Designed and developed components using Python with Django framework.
- Expertise over data mining using Python.
- Experience in developing web-based applications using Python, Django, Web app, Angular.js, HTML5/CSS3, JavaScript and jQuery.
- Architected and developed Python and Django for the backend development of application and PostgreSQL for the database.
- Integrated RESTful APIs built with Python (Flask/Django/FastAPI) into Angular applications using HttpClient.
- Proficient with various DBMS like MySQL, SQL, Oracle, PostgreSQL, MongoDB and Cassandra.
- Used python for end-to-end processing of documents with Spark Streaming, Kafka RPC framework and AWS.
- Proven ability in data engineering with tools like Airflow and Kafka, and adept in frontend development using frameworks such as ReactJS, and Angular.

TECHNICAL SKILLS

Tools:	Python, Django, Magento, Java, J2EE, Core Java, JSP, Servlet, , Flask, Pandas, PyCharm, PyTorch, NumPy, scikit-learn, Python API, Celery, ORM, Microservices, Tornado, SQL Alchemy, AWS, Kubernetes, Docker, JavaScript Java Beans, JDBC, JNDI, Java Web-services, EC2, Golang, Lamda, Hibernate, Spring, JSF,PostMan Struts Framework, Tiles, EJB, AJAX, SOAP, JMS, XSL, XML.
Languages:	Python Java Typescript HTML CSS C++
Markup languages:	HTML5, CSS3, XHTML and XML
Web Services:	RESTful and SOAP.
Change Management tools:	Git, SVN, CVS
Operating Systems:	Unix/Linux, Mac, Windows
Design Patterns:	Observer, strategy, Iterator, Command, State, COR, Bridge, Factory, Visitor Composite
Frameworks:	Django Pandas JavaScript Angular 2.0 AWS
Others:	MySQL Oracle SQL Server MS Office Tools Matlab Word Power Point Excel Outlook

PROFESSIONAL EXPERIENCE:

Client: Humana Insurance, Louisville, KY

Duration: Feb 23 to Present

Role: Sr. AWS Python Developer

Responsibilities:

- Developed views and templates with Python and Django's view controller and templating language to create a user-friendly website interface.
- Developed REST APIs to fetch data from GitHub repositories and render them on Angular components.
- Developed entire frontend and backend modules using Python on Django Web Framework
- Developed API services in Python while leveraging AMQP and RabbitMQ for distributed architectures.
- Wrote and executed various MYSQL database queries from python using Python-MYSQL connector and MySQL dB package.
- Built RESTful APIs using AWS Lambda, API Gateway, and Python (Flask/FastAPI).
- Optimized Lambda performance by reducing cold starts using Provisioned Concurrency.

- Implemented error handling and monitoring with AWS CloudWatch and AWS X-Ray.
- Worked on migrating applications for on-premises to cloud (AWS) using terraform.
- Used BDD framework (Cucumber) for development of microservices.
- Develop Django application on AWS Services including EC2, S3, ELB, EBS, IAM, AMI, Lambda functions, Security Groups and Boto3.
- Configured Kubernetes manifests (Deployments, Services, ConfigMaps, Secrets) to support scalable and secure Python applications.
- Created and optimized Tableau extracts using Python scripts to improve performance and data accessibility.
- Worked with Tableau REST API and Python SDK for automated report generation and dashboard updates.
- Strong experience in DevOps, CI/CD, scripting, and test automation to streamline development processes.
- Developed Python-based CI/CD automation scripts to streamline application builds and releases in Jenkins and Azure DevOps.
- Performed in-depth container debugging and analysis using tools like docker exec, docker logs, and docker inspect.
- Developed and maintained web applications using Python (Django, FastAPI) and TypeScript (Node.js, React).
- Wrote and optimized TypeScript code for better static type checking and maintainability.
- Developed and maintained Vue.js front-end components integrated with Django/Flask APIs.
- Built dynamic, reactive UIs using Vue.js (Composition API & Options API).
- Wrote unit and integration tests for Angular components and services using Jasmine and Karma.
- Optimized Angular app performance using Ahead-of-Time (AOT) compilation and lazy loading techniques.
- Integrated RESTful APIs and WebSockets for real-time data updates.
- Integrated Kubernetes with cloud providers (AWS EKS / Google GKE / Azure AKS) for deploying production-grade Python services.
- Involved in testing Web Services manually and creation of collections using Postman, Advance REST Client and Rest Easy. Built single-page applications (SPAs) using Vue.js with state management via Vuex / Pinia, ensuring smooth frontend interactions.
- Optimized application load times and performance using asynchronous processing and caching techniques, directly improving perceived UX.
- Maintained environment parity across dev/stage/prod by leveraging .env files and configuration injection in Dockerized apps
- Integrated Axios for efficient API communication between Vue.js frontend and Python backend services.
- Worked with WebSockets (Socket.io) to enable real-time data updates between Vue.js frontend and Python-based backend.
- Integrated Vue.js with Snowflake/Airflow APIs, enabling interactive data visualizations for analytics applications.
- Developed interactive dashboards for business intelligence by connecting Tableau with Python-based data processing pipelines.
- Enhanced data storytelling by embedding Python-calculated fields and forecasting models in Tableau.
- Integrated Tableau with cloud platforms like AWS, Azure, or GCP for scalable data processing.
- Automated Tableau report distribution using Python scripts and scheduling tools (Airflow, Cron jobs, or Tableau Server).
- Integrated TypeScript-based frontend with Python-powered backend APIs.
- Integrated Snowflake with Apache Airflow for workflow orchestration, ensuring scheduled and reliable data processing.
- Leveraged Snowflake Snowpark to build Python-based data processing applications within the Snowflake environment.
- Designed and implemented interactive MATLAB-based GUIs using App Designer for data visualization and user-friendly controls.
- Developed and maintained React.js front-end components integrated with Django/Flask APIs.

- Built dynamic and responsive UI using React Hooks and functional components.
- Integrated RESTful APIs and WebSockets for real-time data updates.
- Integrated Python-based backend processing with MATLAB GUIs to streamline complex scientific computations.
- Created custom Docker networks to facilitate communication between microservices (e.g., API, DB, cache).
- Deployed Python-based microservices in containerized environments, preparing applications for Kubernetes and scalable cloud-native architectures.
- Migrated JavaScript codebases to TypeScript, improving type safety and reducing runtime errors.
- Used TypeORM and Prisma for database management in TypeScript applications.
- Created a dashboard for automating repetitive analysis tasks, incorporating MATLAB's interactive controls and Python scripts for advanced functionality.
- Designed and implemented distributed systems using gRPC and protobufs for efficient inter-service communication.
- Created load testing scripts in JMeter to identify and fix performance bottlenecks, optimizing application response times.
- Developed automated tests for Golang projects, achieving 90%+ code coverage and improving software reliability.
- Managed dependencies and project structure with Golang Modules, ensuring seamless builds and deployments.
- Involved in testing Web Services manually and creation of collections using Postman, Advance REST Client and Rest Easy. Built single-page applications (SPAs) using Vue.js with state management via Vuex / Pinia, ensuring smooth frontend interactions.
- Integrated Axios for efficient API communication between Vue.js frontend and Python backend services.
- Developed custom Vue.js directives and mixins to enhance UI functionality and reusability.
- Used Vue Router for seamless client-side navigation in Python-driven web applications.
- Used Vuex/Pinia for state management and optimized performance using lazy loading.
- Optimized UI performance by leveraging MATLAB's built-in graphics and callbacks.
- Collaborated with cross-functional teams to translate requirements into intuitive GUI designs
- Deployed and set up AWS Apache Web Server.
- Implemented RESTful and GraphQL APIs using TypeScript with Express.js and Python backends.
- Hands on experience in developing ETL data pipelines using PySpark, AWS Glue on AWS EMR.
- Implemented Kafka for collecting real time transaction Data, which was then processed with spark streaming with Python to recommend actionable insights.
- Used Django framework to develop the application and used Python modules for web crawling.
- Utilized PyUnit, the Python Unit test framework, for all Python applications and used Django Database APIs to access database objects.
- Worked on several standard Python packages like NumPy, Matplotlib, SciPy, Pandas and PyTables etc.
- Created core Python API which will be using among multiple modules.
- Used Python/Django to write data into JSON files for testing Django Websites. Created scripts for data modeling and data import and export.
- Dockerized monolithic application and re-implemented features as microservices.
- Developed applications and methods with Python scripting for ETL, with MS SQL and Oracle.
- Work with traders, quants, tech teams and middle office to design and deliver excellent solutions to the Emerging Market Fixed Income business.
- Used AWS Glue and Redshift Spectrum for ETL and querying semi-structured data from S3 respectively.
- Involved in building database Model, APIs and Views utilizing Python, in-order to build an interactive web-based solution.
- Performed data extraction and manipulation over large relational datasets using SQL, Python, and other analytical tools.

- Worked on Python to place data into JSON files for testing Django Websites using Eclipse.
- Designed and maintained databases using Python and developed Python based API (RESTful Web Service) using Flask, SQL Alchemy and PostgreSQL.
- Developed Batch Jobs using AWS lambda to write data to S3.
- Wrote python script to compare performance between support vector machine and deep neural network using scikit-learn and NumPy.

Environment: Python, Django, PyCharm, PyTorch, Pandas, Flask, Golang, ReactJS, Python API, Matlab, Tensor Flow, EC2, scikit-learn, NumPy, Micro services, ORM, Celery, Docker, Kafka, Lamda, Tableau, Typescript, SQL Alchemy, VueJS, JavaScript, HTML5, CSS3, Angular, PostMan, Snowflake, Machine learning, data science, AWS.

Client: Amtrak, DC Metro

Duration: May 21 to Dec 22

Role: Full Stack Python Developer

Responsibilities:

- Architect the SQL Server database and implemented the design, performance tuned, and maintenance.
- Involved in analysis, specification, design, and implementation and testing phases of Software Development Life Cycle (SDLC) and used agile methodology for developing data delivery applications.
- Developed user interfaces of the application using front end technologies and used API's developed using Django REST framework to pull data from the backend, showing it to the user.
- Involved in the software development lifecycle (SDLC) of tracking the requirements, gathering, analysis, detailed design, development, system testing and user acceptance testing.
- Developed a responsive Vue.js UI with Vuex for state management.
- Implemented machine learning models in Python and embedded results into Tableau dashboards for predictive analytics.
- Leveraged Kubernetes namespaces and RBAC policies to manage multi-environment deployments and secure access to services.
- Used Web Scrapping (BeautifulSoup, Scrapy) and APIs to fetch real-time data and visualize it in Tableau.
- Automated most of the daily task using python scripting.
- Developed entire frontend and backend modules using Python on Django including web Framework using Git, CSS and JavaScript.
- Automated ETL pipelines using AWS Lambda and Step Functions, improving data processing efficiency
- Developed a MATLAB-based GUI for real-time data plotting and manipulation, integrated with Python for backend data processing
- Implemented secure container practices: non-root user execution, minimal base images (python:3.x-slim), and image scanning via Trivy or Docker Scout.
- Implemented MVC architecture in developing the web application with the help of the Django framework.
- Used Test driven approach (TDD) for developing the application and implemented the unit tests using Python Unit test framework.
- Redesigned and Developed the Frontend UI's of web application using Angular to increase efficiency by 10%.
- Built highly efficient RESTful web services for an application utilizing the latest MVC architecture, resulting in improved performance and scalability.
- Optimized real-time data processing by utilizing MySQL server Database and CRUD operations.
- Enhanced application functionality and productivity by utilizing JIRA to track bugs and maintain Agile methodologies.
- Developed microservices in Python while integrating with TypeScript-based frontends and APIs.
- Worked with AJAX framework to get the asynchronous response for the user request and used JavaScript for the validation.

- Used Docker volumes and bind mounts for data persistence and improved developer productivity in local setups.
- Working on migrating the current monolithic app into Microservices. Involved in building stable React components and stand-alone functions to be added to any future pages.
- Developed data ingestion modules using AWS Step Function, AWS Glue and Python Modules.
- Experience in AWS Cloud Computing services, such as EC2, S3, Lambda, API, DynamoDB, EBS, VPCC, ELB, Route53, Cloud Watch, Athena.
- As part of Azure Data Factory training created end to end ETL workflow for Netezza-to-Azure data migration POC.
- Used AWS Services like EC2 and S3 for small data sets processing and storage, Experienced Maintaining the Hadoop Cluster on AWS EMR.
- Implemented RBAC (Role-Based Access Control) and data security best practices in Snowflake using Python scripts.
- Developed real-time data pipelines using Kafka and Snowflake Streams for event-driven data processing.
- Utilized Pandas and Snowflake for seamless data analysis and transformation before ingestion into dashboards.
- Hands on experience in AWS like Amazon EC2, Amazon S3, Amazon Redshift, Amazon EMR and Amazon SQS, Glue, Athena, Lambda etc.
- Implemented Data Quality framework.
- The backend part of the portal was designed using API gateway and node JS backend.
- Designed and developed horizontally scalable APIs using Python Flask.
- Worked on PySpark APIs for data transformations and used pandas for data transformation.
- Created a Handler function in Python using AWS that can invoke when the service is executed.
- Designed front end using UI, HTML5, Bootstrap, Node.JS, CSS3 and JavaScript.
- Used Angular.JS as the development framework to build a single-page application.
- Used the AWS -CLI to suspend on Aws Lambda function used AWS CLI to automate backup of ephemeral data stores to S3 buckets EBS
- Secured Lambda functions using IAM roles, VPC configurations, and AWS Secrets Manager.
- Developed mapping process for delta file to JSON format for AWS glue consumption and created and call the glue
- Involved in using collections in Python for manipulating and looping through different user defined objects.
- Used PyQt to implement GUI for the user to create, modify and view reports based on client data.
- Used jQuery for selecting particular DOM elements when parsing HTML.
- Worked with JSON based REST Web services.
- Actively worked as a part of a team with managers and other staff to meet the goals of the project in the stipulated time.

Environment: Python, Django, PySpark, MVC, TDD, NumPy, SciPy, Matlab, Golang, Matplotlib, EC2, Pandas, HTML5, CSS3, JavaScript, Angular.JS, Bootstrap, Node.JS, PyQt, Lambda, DOM, Tableau, jQuery, Snowflake, JSON, REST, RabbitMQ, Agile, Oracle, Windows.

Client: DF Young, NY

Duration: Jan 20 to Apr 21

Role: Python Developer

Responsibilities:

- Built main application in Python, Django, leveraging technologies.
- Built website and database system for in house, programmed in Python through Django streamline Framework.
- Experience in working with Libraries including Django ORM.
- Utilized Python libraries such as NumPy, and pandas to read data from csv files aggregate and update data

- Well versed with design and development of presentation layer for web applications using technologies like HTML5, CSS, jQuery, JSON, Bootstrap.
- Worked on an application from front-end enhancements (Html/JavaScript/jQuery) to backend architectural changes. We utilized Ruby on Rails [ROR] with RSpec for continuous integration.
- Secured web applications using JSON Web Token (JWT) authentication standard.
- Researched and developed new login code leveraging SAML, and SSO, and a variety of other authentication libraries.
- Utilized TypeScript's strict typing to prevent runtime errors and improve code reliability.
- Developed custom Vue.js directives and mixins to enhance UI functionality and reusability.
- Used Vue Router for seamless client-side navigation in Python-driven web applications.
- Optimized Vue.js applications for performance and SEO using SSR (Server-Side Rendering) with Nuxt.js.
- Implemented authentication & authorization mechanisms in Vue.js using JWT tokens from Python backend services.
- Designed and developed the UI of the website using HTML, AJAX, CSS, and JavaScript.
- Added support for Amazon AWS S3 and RDS to host static/media files and the database into Amazon Cloud.
- Developed data ingestion modules using AWS Step Function, AWS Glue and Python Modules.
- Responsible for both back-end programming in PHP and front-end functionality using JavaScript, Ajax, jQuery libraries, and other technologies and developed GUI using PHP, HTML, CSS, JavaScript, jQuery, Bootstrap.
- Design and development of UI screens using JSP.
- Developed and implemented the user registration and login feature for the application process from scratch by extending Django user model.
- Worked on multiple python frameworks like: Django and Pyramid
- Developed and tested many features for dashboard using Python, Java, NetBeans, Bootstrap, CSS3, JavaScript and jQuery.
- Worked in MySQL database on simple queries and writing Stored Procedures for normalization.
- The modified application is deployed on WebSphere using JavaScript's for use by interface project.
- Expertise in using version control systems such as CVS and SVN.
- Wrote JUnit test cases using JUnit. Also Worked on waterfall model.
- Development, testing and production environments on AWS (Amazon Web Services) Cloud Computing platform using EC2 and S3.

Environment: Python, Django, ORM, Pandas, Python API, Junit, Unit test, Linux, Unix, AWS EC2, S3, jQuery, MySQL, WebSphere, NetBeans, Rest, Soap, Java, Bootstrap, Ant, XML, Jira, SAML, SSO, JSON Web Token, Golang, Waterfall, Ruby on Rails [ROR], JavaScript, Typescript, HTML5, CSS3

Client: UBS, Raleigh,, NC

Duration: Aug 18 to Dec 19

Role: Python Developer

Responsibilities:

- Developed web applications in Django Framework's model view control (MVC) architecture and manipulated databases by using Django database API along with MySQL.
- Implemented user interface guidelines and standards throughout the development and maintenance of the website.
- Involved in development of Web Services using SOAP for sending and getting data from the external interface in the XML format and wrote python scripts to parse XML documents and load the data in database.
- Developed and designed automation framework using python and Shell scripting.
- Developed GUI using webapp2 for dynamically displaying the test block documentation and other features of python code using a web browser.
- Followed AGILE development methodology to develop the application.
- Designed Django REST web services using Python and Django to get and post data.

- Developed and Tested features of dashboard using CSS, JavaScript, Django, and Bootstrap.
- Experienced in Python data manipulation for loading and extraction as well as with Python libraries such as NumPy, Pandas, and SciPy for data analysis and numerical computations.
- Debugged Tableau-Python integration issues, ensuring seamless data flow and visualization accuracy.
- Designed front end and backend of the application utilizing Python on Django Web Framework.
- For the development of the user interface of the website used HTML, CSS, and JavaScript.
- Experience in developing views and templates with Python and Django's view controller and templating language to create a user-friendly website interface.
- Expertise in developing consumer-based features and applications with Python, Django, HTML, Behavior Driven Development (BDD) and pair-based programming.
- Modify the existing Python/Django modules to deliver certain format of data.
- Development of Python APIs to dump the array structures in the Processor at the failure point for debugging.
- Improved Tableau dashboard performance by optimizing Python scripts and database queries.
- Used Python for data cleaning and pre-processing, reducing load times for Tableau visualizations.
- Creating RESTful web services for Catalog and Pricing with Django MVT, MySQL, and MongoDB.
- Build, Design and Configure various Azure resources (Site to Site VPN, Azure Firewall, VNets, Subnets, Compute, Storage, etc...).
- Design, Implement and Build Azure Backups and Site Recovery on redundant sites.
- Design, Implement and Build Azure Monitoring for cloud systems and Remote Systems at other sites using Azure Diagnostics, Azure Monitoring agent, SCOM and Splunk.

Environment: Python, Django, Jenkins, Hadoop, Map Reduce, Hive, Spark, Oracle, GitHub, Tableau, UNIX, Cloudera, Kafka, Sqoop, Scala, NIFI, HBase, Azure, Informatica

Client: Pay Pal, NY

Duration: Nov 17 to Jul 18

Role: Python Developer

Responsibilities:

- Requirement Analysis and Estimation of project timelines.
- Created Business Logic using Python to create Planning and Tracking functions.
- Developed Python batch processors to consume and produce various feeds.
- Developed internal auxiliary web apps using Django framework with CSS / HTML framework.
- Involved in designing, constructing, and documenting various object-oriented applications using UML, Rational Rose.
- Built database Model, Views and API's using Python for interactive web-based solutions.
- Used Python scripts to update the content in database and manipulate files.
- Designed and developed the presentation layer/client end using HTML, XML, DHTML and JSP.
- Wrote SQL Queries, Store Procedures, Triggers, and functions in MySQL Databases.
- Coordinate with SMEs, other architects, and senior technical staff to identify client's needs, document assumptions, and build-out new requirements and move code through user acceptance testing.
- Implemented Test Driven Development (TDD) strategy for the project.
- Developed and executed User Acceptance Testing portion of test plan.

Environment: Python, Django, HTML5, CSS3, JSP, XML, TDD, SQL, MYSQL and Window

Client: Vekomy Technologies, Hyd, India

Duration: Jul 2014 to Aug 2017

Role: Python Developer

Responsibilities:

- Taken part in software development life cycle (SDLC) of the tracking systems Requirements Gathering,
- Analysis, Detail Design, Development, System Testing and User Acceptance Testing.

- Created UI using HTML, CSS, JavaScript, React, AJAX, JSON, and jQuery.
- Developed entire frontend and backend modules using Java and Python using Web Frameworks.
- Deployed the project into Heroku using GIT version control system.
- Performed troubleshooting, fixed, and deployed many Python bug fixes of the two main applications that were main source of data for both customers and internal customer service team.
- Implement code in Python to retrieve and manipulate data.
- Imported data from AWS S3 into Spark RDD, Performed transformations and actions on RDD's.
- Worked with ELASTIC MAPREDUCE and setup Hadoop environment in AWS EC2 Instances.

Environment: Java, Python, Struts 1.2, Django, HTML5/CSS, CSS Bootstrap, MySQL, MS SQL, JavaScript, Eclipse, Git, Linux, Shell Scripting.
