Email: satyateja13@gmail.com

Education:

University of Alabama at Birmingham (UAB)

Degree: Master of Science

Major: Computer Science

GPA: 3.9

Professional Summary:

- 7 years of experience in ETL development using **Informatica PowerCenter** and **Informatica Intelligent Cloud Services (IICS)**, specializing in **data integration, migration, and cloud environments**.
- Expertise in designing, developing, and optimizing **ETL pipelines**, leveraging **partitioning, pushdown optimization, and cache optimization** to enhance performance.
- Strong knowledge of **data warehousing concepts**, including **Star Schema, Snowflake Schema, SCD Type 2, Change Data Capture (CDC)**, and data governance best practices.
- Skilled in automation using **Python, Shell scripting, SQL**, and developing scalable data workflows to streamline operations and reduce manual effort.
- Proven ability to implement **data quality checks, error handling, and performance tuning** to ensure accurate and efficient data processing.
- Proven experience working on **analysis** and justification to business for data queries, along with fast-paced **quick-turn fixes in production** environment, maintaining data quality and **updating mapping documents**.
- Project experience in **production-support** and **development** roles, handling multiple **batch processing** issues, client communications, **Ad-hoc requests, enhancements, bug-fixes** and **file processing** using Shell Script in Unix/Linux environments.
- Worked on **automations** using shell script to **minimize manual intervention** for notifications, file handling.
- Created **complex SQL scripts (like MERGE, CTE etc)** to update millions of records as per updated business logic with successful data quality checks.
- Experience with **PMCMD** commands and incorporated **restartability** in Informatica workflows using Worklets.
- Hands-on experience with Python to build ETL pipelines using libraries like **Pandas** and **Dataframes**.
- Strong experience in Agile methodologies, collaborating with cross-functional teams using tools like **Docker, JIRA, ServiceNow, and TWS (Tivoli Work Scheduler)**.
- Worked on **incident reduction** by identifying recurring job failures and fixed the issues.
- Excellent stakeholder collaboration skills, ensuring alignment with **business objectives** and delivery of **high-quality solutions** under tight deadlines.
- Experience with mentoring and leading junior resources, ensuring **data and code quality**.
- Proven **ability to take on new technologies** as needed by business and deliver with high standards.

Technical Skills:

- **ETL Tools:** Informatica PowerCenter 10.x/9.x, Informatica IICS (Cloud Data Integration)
- **Programming/Scripting:** SQL, PL/SQL, Python, Shell scripting, Unix/Linux, Java, C
- **Databases:** Oracle, SQL Server, PostgreSQL, MySQL, Teradata, Snowflake, AWS Redshift, BigQuery
- **Cloud Platforms:** AWS, IICS, Snowflake
- **Reporting Tools:** Tableau
- **Development Methodologies/Tools:** Agile (Scrum, Kanban), Docker
- **Scheduling Tools:** TWS (Tivoli Work Scheduler)
- **Incident Management Tools:** ServiceNow, JIRA, BMC Remedy

Achievements & Awards:

- Received the **Sapphire Award** for automating long-term daily and weekly tasks, improving efficiency and productivity.
- Recognized for proactively resolving recurring data pipeline issues, **reducing recurring incidents** significantly.

Professional Experience:

Texas A&M University

ETL Data Engineer

June 2024 – Present

- Developed data pipelines using **IICS** to pull data from Oracle, Flat files, S3 bucket and cloud databases like AWS RDS and Snowflake.
- Optimized transformations and source query to **improve throughput** by employing **performance tuning** techniques which helped in achieving good session runtime performance.
- Built efficient data pipelines using **Python (Pandas, DataFrames)** for preprocessing and analysis.
- Optimised existing **shell script for file handling in Linux** and triggering workflows in **Informatica PowerCenter**.
- Migrated existing ETL from Informatica Power Center to IICS and deployed to **production environment**.
- Automated business communications with record count required for business on a daily basis using **Shell Script**.
- **Minimized number of workflows in a batch** by identifying relevant, dependent workflows and bundling them by creating multiple worklets in a single workflow, thus achieving a decluttering look for monitoring.
- Worked on building data visualization based on business requirements using Tableau dashboard.
- Gained hands-on experience with **NVIDIA Omniverse** - Isaac sim for AI-based simulations and visualizations.

Cognizant Technology Solutions

Feb 2017 – Dec 2022

Associate - Informatica ETL Developer

Client: Avis Budget Group (Travel & Hospitality)

Oct 2020 – Dec 2022

- Designed and implemented **ETL workflows** using **Informatica IICS**, optimizing data flow across cloud and on-premise systems.
- Automated ETL workflows using **Shell script**, reducing manual efforts by 30%.
- Achieved a **500% improvement** in performance through **ETL performance tuning** and best practices.
- Developed restartability features in ETL workflows to ensure fault tolerance and business continuity.
- Worked on **optimizing PL/SQL** code by eliminating redundant temporary table loads, optimizing query by achieving a good execution plan in Oracle.
- Worked closely with SMEs for building ETL pipeline to load relevant data, extracting from fact and **dimensional tables**, ensuring cost analysis match with mainframe data.
- Mentored a team of 5 junior developers, guiding them through technical and functional aspects of the project.
- Led a team of 5 for **Informatica upgrade** project in hand with administrator, that included testing workflows in new environment, folder & file migrations from Unix to Linux, testing scripts to ensure no breakdown due to change from Unix to Linux, verify proper access, **database connectivity** (including database links) etc.
- Managed high-complexity projects involving multiple vendors, completing with **zero defects** and receiving client accolades.

Client: Kaiser Permanente (Healthcare-Production Support)

Feb 2017 – Oct 2020

- Developed and optimized **ETL processes** to improve data throughput by 300% through performance tuning techniques.
- Migrated and integrated data from **Flat Files, Oracle, SQL Server**, ensuring compliance with **HIPAA** regulations.
- Designed and implemented **SCD Type 2** transformations for historical data tracking.
- Worked on several **defects, enhancements** by fixing historical data ranging from 1M to 500M records with 0 defects using complex SQL scripts with **MERGE updates**.
- Delivered clear analysis to client on stand-up calls using predictive analysis report and actual runtime of sessions, with detailed explanation in case of any unforeseen deviation by analysing proactively.
- Worked on existing **shell script changes** to handle files efficiently, by working on small changes to the SQL queries running via **SQLPlus** by working with DBA to set a cost efficient plan, and using **bind variables**.
- Handled incidents using BMC Remedy tool, and upgraded to **ServiceNow**. Identified **recurring incidents** and proactively worked on fixing the issues involving ETL development efforts, changes from source team.
- Collaborated in Agile teams, managing sprints and project timelines using **JIRA**.
- Developed interactive dashboards using **Tableau** for healthcare analytics.
